

Make a Paper Airplane

December 17, 2020 will be the 117th anniversary of manned flight. Why not honor that great invention by making paper airplanes?

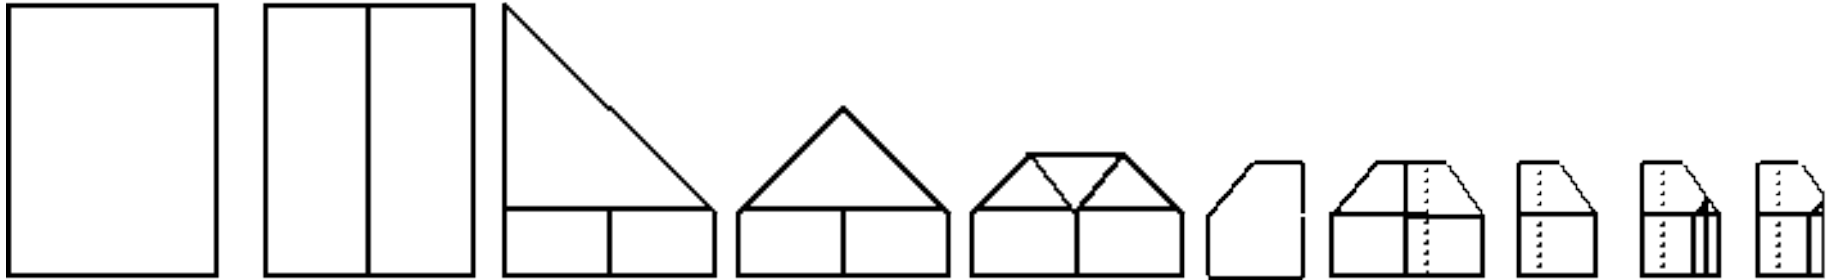

Almost every scout has tried his hand making a paper airplane. They are easy to make and lots of fun to fly. Below are pictures for making three different airplanes. There are many other resources on the Internet and in books. All you need is some paper... Good Luck!

Easy Paper Airplane:

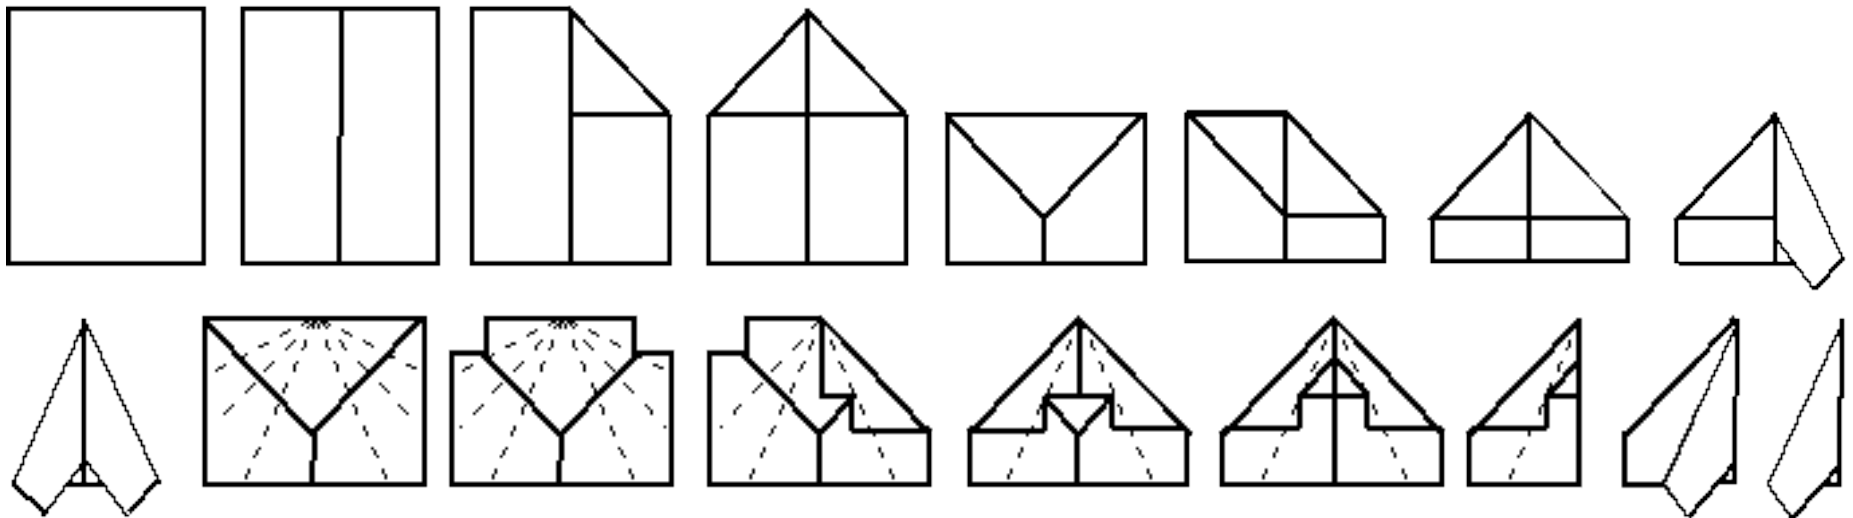

Acrobat Flyer:

This plane is a little harder to make but is a lot more exciting to fly. It is very acrobatic. You can make it do loops or turn in a circle. It will also fly for a longer time.

Stable Flyer:

This plane is more difficult to fold and requires some cutting. It is a very stable flyer. It does not do well when thrown hard. Back when I was in school, I used to gently launch these from the top seats of a basketball arena. They would frequently glide all the way to the court.

The plan with the slash lines are a sideways way to make the same plane.

Have Fun!!!
