Find out if you reach speed with your CPR knowledge by taking this free CPR practice test. These questions and answers reflect the latest guidelines of the American Heart Association. Answering these practice test questions may help you prepare for a CPR test. 0 of 10 completed questions: Information prepared for cPR exam based on the American Heart Association's 2010 standards. I've already completed the test. And then you can't turn it back. You must sign in or register to start the test. You have to finish the test, to start this test: question 1 of 10 question2 of 10 question3 of 10 question4 of 10 question5 of 10 question6 of 10 question7 of 10 questions 8 out of 10 question9 of 10 question1 10 of 10 40 questions | Total attempts: 20910 Human Health people country unusual appearances or behaviors what should I do if a person does not give consent? Give care and no contact 911 do not give care but do not call 911 when you should call 911: the person has runny nose person has stomach pain thar a person has trouble breathing transfer an infected person only if: the scene is or become unsafe you need to reach another bryson with another injury you need to transfer a person to give emergency care by taking the following standare precautions to protect yourself and the person, can you: reduce the transmission of the disease and reduce the number of times you need to wear gloves the risk of transmission of the disease? Do not touch or move painfully, the affected areas on the body you can determine that the person may be in shock. Is all the following except: Keep ing a comfortable person watching abcs the person lifting the person's legs the 12-inch best way to check if the person is unconscious is: press the person and shout are you OK? Look, listen, I feel signs of breathing. You see a woman falling apart in front of you. Enter the foyer of your building. You check the scene, and then the victim is conscious, but she does not respond. What should you do next? Pushing a person to the hospital which of the following are signs of difficulty breathing? What care should you give to conscious adults who suffocate and cannot cough, talk or breathe? Give 2 breaths of slow rescue do you look a strange object / remove give back strokes and abdominal orientations drop the person on the ground and open the airway always check the signs of life no more - when giving rescue breaths to an adult, you should give breath over a period around: if a person suffers pain or discomfort in the chest that lasts more than 3-5 minutes or to go away and come back, this person is most likely there: about how many cycles of CPR should lead to adults in two minutes? A cycle (or set) of breath pressure in an adult's CPR is: 15 strokes per 3 breaths 15 compressions per 1 breath 30 compressions per 2 breaths for every 1 breath after the first minute, then every other minute after that CPR should not stop, another CPR training responder should take more while checking the signs of life after the first minute, then not after the arrival of EMS. Early CPR is an important link in the heart survival chain because: CPR prevents heart attack with early CPR, most heart attack victims do not need AED it helps to circulate blood containing oxygen to vital organs until AED is ready for use or advanced medical staff arrives and helps to restart the heart until CPR is determined to be safe, the person's condition worsens to continue to continue with any of the following signs of breathing? Pale, achen, cleared, or bluish skin color as a child choking on a piece of hard candy. She is conscious and coughing strongly. What should you do? Put her down and give the abdominal orientations to stay with her and encourage her to keep coughing does a stranger check the look/remove her slap on the back until she stops coughing when giving a baby's rescue breath, how should you breathe in a child? Giving a breath over a second period of one second performance of early CPR on a child in cardiac arrest can: reducing the child's need for oxygen to keep the vital organ supplied with oxygen containing blood causing permanent brain damage chest pressure directly down about 1-11/2 inches giving cycles of chest pressure thirty and two breaths of chest pressure at a 45 degree angle
