With the Bosch Video Management System (BVMS) 7.5, Bosch has expanded its range of VMS software with the introduction of BVMS 7.5 Viewer , a new variant aimed at small and medium-sized applications. This entry level and free version of Bosch's existing Video Management System allows small business owners to watch multiple live video streams of their high-resolution surveillance cameras from their computer screen. It also allows you to play recorded videos, and perform forensic searches of video recordings. The BVMS 7.5 Viewer is particularly easy to install and use and can be downloaded for free from Bosch's website. To access only live and recorded video, two configuration steps are required: first, users assign their selected devices to the system, and then simply organize and group them as needed. Thanks to the software's motion and forensic search function, even a huge recording database can be scanned for a specific event in seconds. The rules for searching are easily defined through a graphical user interface and can be changed even after an event. For example, once a robbery occurs, a store's security manager can easily define a specific perimeter, namely the area or even a specific shelf in the store from where the item was stolen. The video database can be scanned very quickly for any suspicious activity that occurred within that perimeter. BVMS Viewer 7.5 will deliver the video recording section showing that particular event on the user's desktop or notebook screen within

seconds, so there is no need to watch hours of recordings that find the exact moment when the object was removed from the shelf. BVMS 7.5 Viewer is a scalable solution for Windows-based operating systems. It supports all Bosch video products and grows with the user's needs. The free version supports up to 16 video cameras and five recording devices, in up to 16 different locations. If more sites or improved features are required, you can easily upgrade to a fee-based solution to include additional additional features support up to 10,000 sites, reusing existing settings, and with the same appearance and feel so that no more operator training is required.
