

I'm not robot

Continue

simple HTML form. We create a form template in our component using the FormGroup and FormControl classes. Then, using policies such as formGroup, formControlName, and formGroupName, we link our HTML to our form template. In the next talk we will learn how to add validators to our forms to give visual feedback when the data entered is invalid. import { NgModule, Component, Pipe, OnInit } from '@angular/core'; import { ReactiveFormsModule, FormsModule, FormGroup, FormControl, FormBuilder } from '@angular/forms'; import { BrowserModule } from '@angular/platform-browser'; import { platformBrowserDynamic } from '@angular/platform-browser-dynamic'; @Component({ selector: 'model-form', templateUrl: 'model-form.html', styleUrl: 'model-form.css', suppressWarnings: true }) export class ModelFormComponent implements OnInit { constructor() {} ngOnInit() { this.createFormControls(); this.createForm(); } onSubmit() { if (this.myform.valid) { console.log('Form Submitted!'); console.log(this.myform.value); this.myform.reset(); } } } @Component({ selector: 'app', templateUrl: 'app.html', styleUrl: 'app.css', suppressWarnings: true }) export class AppComponent { constructor() {} } } @NgModule({ imports: [BrowserModule, FormsModule, ReactiveFormsModule], declarations: [ModelFormComponent, AppComponent], bootstrap: [AppComponent] }) export class AppModule {} platformBrowserDynamic().bootstrapModule(AppModule); Did you get a mistake or do you want to contribute to the book? Edit this page on GitHub! This unique course teaches advanced javascript knowledge through a series of interview questions. Bring your JavaScript to today's 2020. Take it now! Nwo!
