

## Installation -

**Step 1** – Remove Dawg Tree Pee Guard from box

**Step 2** – Expand the Dawg Tree Pee Guard and lay flat (3/4 moon shape) at the base of desired tree or structure to protect

**Step 3** – Remove the Spring Stop from the bungee cord at the top of the Dawg Tree Pee Guard

**Step 4** – Slowly raise the Dawg Tree Pee Guard along the base of the tree

**Step 5** – The Dawg Tree Pee Guard will form a complete circumference around the tree base

**Step 6** – Feed the male end of the top bungee through the female loop and reattach the Spring Stop

**Step 7** – Secure the buckle on the cord at the base

Ensure that the Dawg Tree Pee Guard is securely fastened around the tree. Once securely fastened and if the tree base is thick and strong enough – the Guard may be flipped upwards for landscaping and weed eating purposes. It will suspend in the upward position and half will be rotated in order to work around the base of the tree.

It is highly recommended that a protective layer of mulch be added to the base of the tree, to act as a filter for the urine and replaced as needed. This will capture the urine before the roots. This should be replaced once the mulch becomes ineffective. Ensure to always water the tree. Tree species grow at different rates. Ensure that you adjust the spring stop as needed for growth.

The Dawg Tree Pee Guard may be used for other structures – such as mailboxes, etc... that will allow for a secure connection.

- The Dawg Tree Pee Guard works with any new or young tree – up to 17” circumference/ 5” diameter. The DTPG connects to the tree and allows for expansion without inhabiting or stunting growth.
- In order to flip the DTPG, the tree must have a wide enough base that allows for a secure adjustment.
- Smaller trees may be surrounded by the DTPG with no contact - while still providing a 360 degree layer of protection – and much room for growth.

**CAUTION:** After a period of time, the weatherproof elastic cords and plastic rods may begin to weaken and deteriorate. Be aware of the condition of the unit if flipping up and down for landscaping purposes. In addition, do not attempt to secure the Dawg Tree Pee Guard to a tree base circumference beyond its limitations. Protective eyewear should be worn while cycling the unit for landscaping. If the unit is placed in a public area or area frequented by pedestrian, place visible notice nearby to ensure that third parties are aware of the unit.
