This is a print replica reproduction of about 30 official NASA program documents, reports and manuals about the historic Project Gemini human space program, including some material unique to the archives of World Spaceflight News. The contents - over 6500 pages - include:

ON THE SHOULDERS OF TITANS (scanned version) \* ON THE SHOULDERS OF TITANS (html version) \* GEMINI IMAGE COLLECTION JSC DIGITAL IMAGES \* GEMINI OVERVIEW \* GEMINI PROGRAM MATERIAL \* GEMINI SPACECRAFT PRESS REFERENCE \* GEMINI SUMMARY CONFERENCE REPORT 1967 \* GEMINI TECHNOLOGY AND OPERATIONS - A CHRONOLOGY SP-4002 \* GEMINI MANNED FLIGHT PROGRAM TO DATE \* GEMINI 1 FLIGHT PRESS KIT \* GEMINI 2 FLIGHT PRESS KIT \* GEMINI 3 FLIGHT PRESS KIT \* GEMINI 4 FLIGHT PRESS KIT \* GEMINI 5 FLIGHT PRESS KIT \* GEMINI 6 FLIGHT PRESS KIT \* GEMINI 7 FLIGHT PRESS KIT \* GEMINI 8 FLIGHT PRESS KIT \* GEMINI 9 FLIGHT PRESS KIT \* GEMINI 10 FLIGHT PRESS KIT \* GEMINI 11 FLIGHT PRESS KIT \* GEMINI 12 FLIGHT PRESS KIT \* PROJECT GEMINI - A TECHNICAL SUMMARY \* GEMINI GUIDANCE AND CONTROL PERFORMANCE SUMMARY \* GEMINI DRAWINGS AND DIAGRAMS \* GEMINI: MERCURY EXPERIENCE APPLIED \* GEMINI V INERTIAL GUIDANCE SYSTEM AND COMPUTER ANALYSIS \* GEMINI FAMILIARIZATION MANUAL LONG RAND AND MODIFIED CONFIGURATIONS \* GEMINI 2 MISSION REPORT \* GEMINI 3 MISSION REPORT

Gemini was an early NASA human spaceflight program. Gemini helped NASA get ready for the Apollo moon landings. Ten crews flew missions on the two-man Gemini spacecraft. The Gemini missions were flown in 1965 and 1966. They flew between the Mercury and Apollo programs. NASA designed the Gemini capsule for this program. On the outside, it looked much like the capsule used for the Mercury missions. It was bigger than the Mercury capsule. It could hold two people instead of one. But each astronaut did not have much room. The Gemini capsule improved on the Mercury spacecraft. Basically, the Mercury spacecraft could change only the way it was facing in its orbit. The Gemini could change what orbit it was in. NASA named the Gemini spacecraft and program after the constellation Gemini. The name is Latin for "twins"; NASA used this name because the Gemini capsule would carry two people. The Gemini capsule flew on a Titan II rocket. The two-stage Titan II

was originally a missile. NASA made changes to the missile so it could carry people. Before the first astronauts flew on it, it launched without a crew so that NASA could test its safety. Astronauts accomplished many things on the Gemini missions. The first flight to carry astronauts was Gemini 3 (also known as Gemini-Titan 3 or GT-3). That flight tested the new vehicle. The Gemini 4 mission included the first U.S. spacewalk. Gemini 5 stayed in orbit for more than a week. The Gemini 6A and 7 missions were in space at the same time and met each other in orbit. Gemini 7 stayed in space for two weeks. Gemini 8 connected with another unmanned spacecraft in orbit.

The Gemini 9 mission tested different ways of flying near another spacecraft. It also included a spacewalk. Gemini 10 connected with another spacecraft and used its engines to move both vehicles. The Gemini 11 mission flew higher than any NASA mission before. The last mission, Gemini 12, solved problems from earlier spacewalks. Before Gemini, NASA had limited experience in space. The Mercury missions had proved astronauts could fly in space. But before people could land on the moon, NASA had to learn many things. It had to learn what happened when astronauts spent many days in space. It had to learn how astronauts could go outside a spacecraft in a spacesuit. It had to learn how to connect two spacecraft together in space. Going to the moon would require doing all of these things. Before Gemini, NASA had not done any of them. Gemini proved NASA could do them all.
