

WHY SHOULD YOU EXHIBIT AND SPONSOR?

You'll meet hundreds of qualified buyers

Selling in a tight market involves legitimate needs, available funds and trust. Everyone does online research. But when significant money is involved, no one trusts a website alone. They check references, talk to other customers and negotiate directly before they buy.

That's why face-to-face selling remains such an effective sales channel, especially when it involves engineered products and services. Your prospects want to ask questions, to verify what they've seen or read – and to make sure they can trust your business.

If you're not on their "short-list," you need to get factored into their consideration as a credible option. That requires presenting the value your product or service provides in a face-to-face setting.

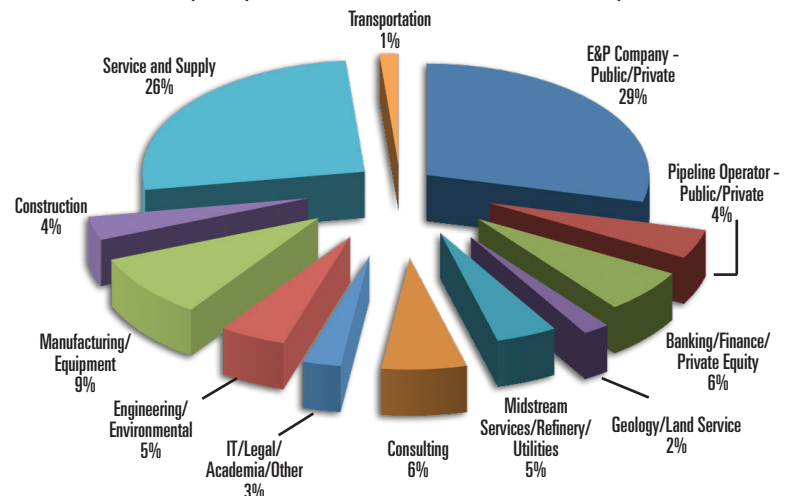

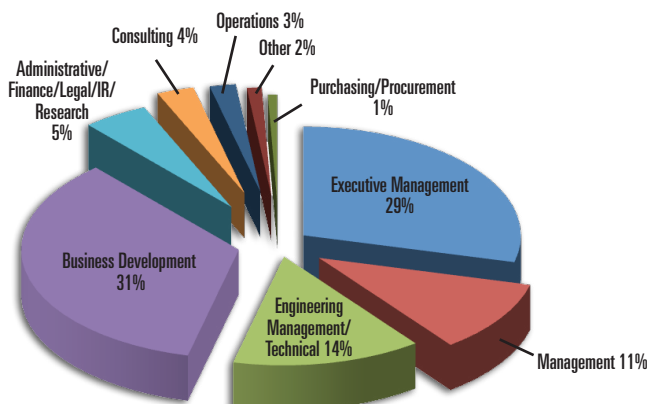

That's why exhibiting at **Hart Energy's DUG** conferences, the world's largest series of unconventional resource development events, delivers exceptional value.
It's all part of the "DUG experience."

DUG Rockies offers specific value for you

What makes **DUG Rockies** exceptionally effective for you and your sales team? The quality of its attendees. This conference presents serious information and attracts serious players.

World-class conference leads to effective networking

Hart Energy's award-winning editorial team spends months recruiting **DUG** speakers based on the value of their perspectives for attendees – a serious, high-level crowd with solid business reasons for being there.

DUG Rockies speakers are top executives with producing companies – **chairmen, CEOs, COOs and presidents.**

Before, during and after the conference sessions, exhibitors have ample opportunity to meet these speakers and the hundreds of industry peers and colleagues in the audience.

Regional Highlights

Efficient producers rewarded

- **PDC Energy** will invest \$480 million developing the Wattenberg Field in 2018, with plans to drill ~130 wells and bring another 139 wells on production.
- **Continental Resources** transitioned to longer laterals, slickwater fracks with up to 50 stages, and now its Bakken wells average EUR is ~980,000 boe.
- High-intensity completions allow **Oasis Petroleum** to grow production within cash flow at a \$50/bbl WTI. Its well costs (\$10.6 million in '14) have fallen to \$5.5-to-6.5 million.
- The **Dakota Access pipeline** (DAPL) may save producers \$540 million/yr. in shipping costs.
- D-J Basin drillers can break even \$40 to \$42/bbl oil according to Ponderosa Advisors.
- The Powder River's six targeted sandstones and source rocks make up ~5,000 feet of column. **Anschutz Exploration** says sandstones are "the low hanging fruit" at \$48 oil.
- **Exxon Mobil** finished four Bakken wells with 3-mile laterals—and is approaching the 4-mile mark. One analyst called it "a game changer" that could leap frog competitors' unit costs and returns.

Judge the quality of the crowd for yourself!
