DESCRIPTION

Foundations of Technology is an action-based engineering and technology educational course emphasizing design and problem-solving techniques, and understanding the following technical systems: communication, electrical, fluid, mechanical, and structural. In this course, students develop an understanding of how these systems evolved, are utilized, and the significance that they have in our history and now.

EXAM BLUEPRINT

STANDARD	PERCENTAGE OF EXAM
1- Importance of Technology	16%
2- Basic Technological System Model	14%
3- Design Principles	14%
4- Design/Problem Solving Process	21%
5- Resources, Tools, Materials, and Processes	13%
6- Properties of Systems	22%

STANDARD 1

STUDENTS WILL UNDERSTAND THE IMPORTANCE OF TECHNOLOGY AND HOW IT IMPACTS OUR LIVES

- Objective 1 Students will recognize that technology is how humans modify the world around them to meet their needs and wants or to solve problems and extend their capability.
- Objective 2 Students will describe and compare the relationships of technology and science.
- Objective 3 Students will explain both positive and negative impacts of technology on our society, environment, and economy. Ethical implications will also be described.

Standard 1 Performance Evaluation included below (Optional)

STANDARD 2

STUDENTS WILL UNDERSTAND THE COMPONENTS OF THE BASIC TECHNOLOGICAL SYSTEM MODEL

- Objective 1 Students will identify how communication, electrical, fluid, mechanical, and structural systems may be used in these seven areas: communication, construction, manufacturing, transportation, bio-medical, agriculture, power, and energy.
- Objective 2 Students will describe the basic technological system model, which includes input, process, output, and feedback.
- Objective 3 Students will identify the technological system inputs (resources) as materials, time, energy, tools/machines, capital, information, and human resources. They will discuss management strategies of resources including the following: reducing, recycling, reusing, and renewing resources.
- Objective 4 Students will identify and explain the three major types of processes for technological systems as problem solving/design, production, and management.
- Objective 5 Students will recognize and be able to discuss system outputs as having desirable and undesirable, intended and unintended, and immediate and delayed aspects.

Standard 2 Performance Evaluation included below (Optional)

STANDARD 3

STUDENTS WILL BE ABLE TO UNDERSTAND AND APPLY PRINCIPLES IN DEVELOPING A PROCESS, PRODUCT, OR SYSTEM

- Objective 1 Students will understand and apply design principles including the following: structure, function, appearance, safety, durability, reliability, economic and financial feasibility, marketability, quality control, environmental impacts, manufacturability, maintainability, and human factors of engineering (ergonomics), ease of use, ease of assembly, social appropriateness.
- Objective 2 Students will classify technologies as inventions or innovations. They will also be able to identify how technological innovations are created or enhanced through connections to other fields of study.
- Objective 3 Students will understand the concepts and value of planned failure, durable goods, and nondurable goods.
- Objective 4 Students will assess trade-offs in terms of the outputs of technological systems. They will also be able to analyze trade-offs in optimizing product design.

STANDARD 4

STUDENTS WILL DESCRIBE AND APPLY THE BASIC STEPS IN THE DESIGN/PROBLEM SOLVING PROCESS

1. STAGE 1: PROBLEM STATEMENT AND DESIGN BRIEF
2. STAGE 2: INVESTIGATION AND RESEARCH
3. STAGE 3: GENERATE ALTERNATIVE SOLUTIONS
4. STAGE 4: CHOOSE THE BEST SOLUTION
5. STAGE 5: MODELING AND PROTOTYPING
6. STAGE 6: TEST AND EVALUATE

- Objective 1** Students will utilize briefs and specifications (criteria and constraints) in order to maximize a solution in their design work. Students will differentiate between a problem/opportunity and a solution.
- Objective 2** Students will investigate and research data that will be useful in developing a design solution using a variety of mediums, which may include the following: interview, Internet, databases, books, magazines, video, observation, measurement, and surveys.
- Objective 3** Students will brainstorm and creatively generate a multitude of possible solutions to the stated problem or opportunity.
- Objective 4** Students will analyze potential solutions based on design principles (see standard 3) and make a decision as to the best solution.
- Objective 5** Students will implement the chosen solution. They will develop and communicate their design using technical sketching and/or drawing techniques, make graphical, mathematical and/or physical models and prototypes.
- Objective 6** Students will test their design for features such as durability, ease of assembly, reliability, strength, environmental impact, quality, safety and other design principles (see standard 3).
- Objective 7** Students will prepare an evaluation of the design product. This should include an evaluation of the product, the process, and themselves.
- Objective 8** Students will present their solution in a professional manner using a portfolio, which may include engineering drawings, posters, models, power point presentations, web site, or other appropriate methods.

Standard 4 Performance Evaluation included below (Optional)

STANDARD 5

STUDENTS WILL USE RESOURCES, TOOLS, MATERIALS, AND PROCESSES SAFELY AND EFFICIENTLY

- Objective 1** Students will follow general laboratory safety practices.
- Objective 2** Students will follow specific equipment safety practices.
- Objective 3** Students will identify potential safety hazards and make appropriate precautions or corrections.
- Objective 4** Students will be able to describe manufacturing processes for changing materials, which are casting and molding, forming, separating, conditioning, assembling, and finishing.
- Objective 5** Students will use tools, equipment, materials, and processes to produce a working model or prototype of a solution to a technical problem.

Standard 5 Performance Evaluation included below (Optional)

STANDARD 6

STUDENTS WILL IDENTIFY COMPONENTS AND PROPERTIES ASSOCIATED WITH COMMUNICATION, ELECTRICAL, MECHANICAL, FLUID, AND STRUCTURAL SYSTEMS

- Objective 1 Students will be able to communicate an idea graphically using sketches, isometric drawings, orthographic drawings, schematics, charts, and graphs using either sketching mechanical drawing or computer-aided design (CAD) techniques.
- Objective 2 Students will define and explain the following electronic terms and concepts: electricity, electronics, conductor, insulator, semi-conductor, series circuit and parallel circuit, voltage, and resistance.
- Objective 3 Students will assemble an electronic circuit. They will understand the use of schematics, function of basic electronic components, and electronic measurement.
- Objective 4 Students will define and explain the characteristics of mechanical system functions being that of changing speed, power, distance, and direction and apply them in mechanical systems.
- Objective 5 Students will assemble a mechanical system using gears, pulleys, and levers. They will understand the basic components of mechanical components and be able to calculate mechanical advantage.
- Objective 6 Students will define and explain advantages and disadvantages of pneumatic versus hydraulic systems (i.e., quick, slow, powerful, clean, dirty, cost, etc.). They will understand the concept of fluid power as it relates to air and liquid.
- Objective 7 Students will assemble a fluid power system. Students will understand the function of the basic fluid power components: pump, tank, valve, cylinder, piston, and actuator and be able to calculate pressure and force in the system.
- Objective 8 Students will be able to define and explain basic structural terminology including compression, tension, torsion, stress, strain, triangulation, static load, and dynamic load.
- Objective 9 Students will assemble a structural system.

Foundations of Technology Performance Standards (Optional)

Performance assessments may be completed and evaluated at any time during the course. The following performance skills are to be used in connection with the associated standards and exam. To pass the performance standard the student must attain a performance standard average of **8 or higher** on the rating scale. Students may be encouraged to repeat the objectives until they average **8 or higher**.

Students Name _____

Class _____

PERFORMANCE RATING SCALE

STANDARD 1 Importance of Technology

Score:

- Research a technological topic using multiple sources and present your findings
 - Internet
 - CDROM
 - Personal Interviews
 - Books

STANDARD 2 Basic Technological System Model

Score:

- Build a model or prototype of a product applying design principles:
 - Flexibility
 - Balance
 - Function
 - Proportion
 - Safety
 - Economic considerations
 - Manufacturability
 - Reliability
 - Quality Control
 - Ergonomics

STANDARD 4 Design/Problem Solving Process

Score:

- Prepare and give a technological presentation of a product, process, or system in a professional manner
 - Oral presentation with visuals
 - PowerPoint
 - Video

- CD-ROM portfolio collection
- Product display
- Participate in a team activity and identify advantages of collaboration

STANDARD 5 Resources, Tools, and Materials

Score:

- Demonstrate the safe and proper use of basic production and equipment
- Demonstrate the proper operation and care of computer hardware, software, and peripherals

PERFORMANCE STANDARD AVERAGE SCORE:
