Using the Samsung Experience and TouchWiz, it is designed to be further optimized, with specific changes to facilitate one-hand use on smartphones with large screens. It was unveiled at Samsung's developer conference in 2018 and first introduced as part of Samsung firmware updates to Android 9.0 Pie. Features The One UI has been designed as part of a lens to make Samsung hardware and software work together in perfect harmony and provide a more natural experience on large-screen smartphones. A prominent design model in included applications is to position common features and UI elements along the bottom of the screen instead of near the top. This makes them easier to reach with a user's thumb when using the device with one hand. For similar reasons, apps to push the main content toward the vertical center of the screen. The navigation bar supports the use of gestures, and system night mode (which provides UI elements and supported applications with a dark color scheme) is added. As with android P (beta phase), the Recent App Overview screen uses a horizontal layout, unlike the vertical layout of previous versions. [1] [2] [3] [4] The User Interface publication has been included in new Android devices marketed by Samsung since the beginning of 2019, including the Galaxy S10 and Galaxy A series (2019). [5] The user interface was marketed for Samsung devices before 2019 as part of the Android 9.0 Pie update, starting with the Galaxy S9 and Galaxy Note 9 updated between December 2018 and January 2019, Galaxy S8 and Galaxy Note 8 on February 2019, various low-end models (especially Galaxy A and Galaxy J models from 2018. from 2018. market from 2017.) mid-2017. i Galaxy Tab models selected at the end of 2019. [6] [7] Samsung introduced a public beta version of one UI in November 2018. [8] Supported devices The following list is constantly updated. Some of the updates you see may not yet be available for the Italian versions of the devices listed in the table. Galaxy M series devices and some low-cost Galaxy A series devices use The One Core user interface, with a reduced version of the interface compared to standard User Interface One.
