

Welcome to Structure & Function Education!

Structure & Function Education is an internationally recognized education platform that has been utilized by major professional sports teams, leading NCAA programs, world-class health organizations, and the U.S. Military to rehab their athletes and patients alike. Our curriculum has been developed by Sue Falsone, ATC/PT, a widely respected clinician in the rehab industry, therapist to numerous professional athletes and member of the Nike Performance Council. Drawing on years of experience, Sue has developed what are widely considered to be the most comprehensive dry needling curriculum and certification programs (SFDN) in the world. SFDN follows a Pentamodal Method, a unique dry needling protocol developed by Sue that addresses sources of pain as well as causes of pain, including fascial points and peripheral nerves.

Additionally, our Bridging the Gap from Rehab to Performance curriculum is proprietary to Structure & Function Education and unlike any other course you will find. Based on Sue's book by the same name, these classes take an in-depth look at rehabbing patients back to peak physical performance, including discussions on Somatosensory System, as well as the Top 5 Considerations for Optimal Function as identified by Sue.

In addition, we are a proud provider of Fascial Manipulation® by Stecco. Fascial Manipulation® is a manual therapy method developed by Luigi Stecco that presents a complete biomechanical model that assists in deciphering the role of fascia in musculoskeletal disorders. Understanding the FM method will help you to identify specific, localized areas of the fascia in connection with specific limited movements.

To learn more about Structure & Function Education and understand why the top organizations and athletes in the world turn to Sue for education and treatment visit: www.structureandfunction.net.

Structure & Function Education Online Courses

These online education courses cover several of the leading topics in sports performance and can be completed at your own pace. The classes can also be taken in any order, allowing you to customize your learning experience. Each proprietary course includes a series of video lectures, downloads, readings, exams, with many offering CEUs!

- > Introductory courses are available to you for free and will give you an inside look at who we are and allow you to get to know Sue Falsone and the Structure & Function Education team.
- > The Bridging the Gap from Rehab to Performance (BTG) curriculum is proprietary to Structure & Function Education and unlike any other online course you will find. Based on Sue's book by the same name, these classes take an in-depth look at rehabbing patients back to peak physical performance, including discussions on Somatosensory System, as well as the Top 5 Considerations for Optimal Function as identified by Sue.
- > Dry needling online courses are specifically designed for current dry needling practitioners. These courses will take a deeper look into specific topics that will enhance your knowledge and application of dry needling within Structure & Function's Pentamodal Method.

Structure & Function Education Membership Subscription

What are the benefits of becoming a member?
