Quick Inventory of Depressive Symptomatology (Clinician-Rated) (QIDS-C16)

Patient Name: ____________________________________________

Date: ____________________________________________________

Please circle the 1 response to each item that best describes the patient for the last 7 days.

1. Sleep-onset insomnia
   0 Never takes longer than 30 minutes to fall asleep.
   1 Takes at least 30 minutes to fall asleep, less than half the time.
   2 Takes at least 30 minutes to fall asleep, more than half the time.
   3 Takes more than 60 minutes to fall asleep, more than half the time.

2. Mid-nocturnal insomnia
   0 Does not wake up at night.
   1 Restless, light sleep with few awakenings.
   2 Wakes up at least once a night, but goes back to sleep easily.
   3 Awakens more than once a night and stays awake for 20 minutes or more, more than half the time.

3. Early-morning insomnia
   0 Less than half the time, awakens no more than 30 minutes before necessary.
   1 More than half the time, awakens more than 30 minutes before need be.
   2 Awakens at least 1 hour before need be, more than half the time.
   3 Awakens at least 2 hours before need be, more than half the time.

4. Hypersomnia
   0 Sleeps no longer than 7–8 hours/night, without naps.
   1 Sleeps no longer than 10 hours in a 24-hour period (including naps).
   2 Sleeps no longer than 12 hours in a 24-hour period (including naps).
   3 Sleeps longer than 12 hours in a 24-hour period (including naps).

Enter the highest score on any 1 of the 4 sleep items (1–4 above): _______

5. Mood (sad)
   0 Does not feel sad.
   1 Feels sad less than half the time.
   2 Feels sad more than half the time.
   3 Feels intensely sad virtually all the time.

6. Appetite (decreased)
   0 No change from usual appetite.
   1 Eats somewhat less often and/or lesser amounts than usual.
   2 Eats much less than usual and only with personal effort.
   3 Eats rarely within a 24-hour period, and only with extreme personal effort or with persuasion by others.

7. Appetite (increased)
   0 No change from usual appetite.
   1 More frequently feels a need to eat than usual.
   2 Regularly eats more often and/or greater amounts than usual.
   3 Feels driven to overeat at and between meals.

8. Weight (decrease) within the last 2 weeks
   0 Has experienced no weight change.
   1 Feels as if some slight weight loss occurred.
   2 Has lost 2 pounds or more.
   3 Has lost 5 pounds or more.

9. Weight (increase) within the last 2 weeks
   0 Has experienced no weight change.
   1 Feels as if some slight weight gain has occurred.
   2 Has gained 2 pounds or more.
   3 Has gained 5 pounds or more.

Enter the highest score on any 1 of the 4 appetite/weight change items (6–9 above): _______
10. Concentration/decision making
0 No change in usual capacity to concentrate and decide.
1 Occasionally feels indecisive or notes that attention often wanders.
2 Most of the time struggles to focus attention or make decisions.
3 Cannot concentrate well enough to read or cannot make even minor decisions.

11. Outlook (self)
0 Sees self as equally worthwhile and deserving as others.
1 Is more self-blaming than usual.
2 Largely believes that he/she causes problems for others.
3 Ruminates over major and minor defects in self.

12. Suicidal ideation
0 Does not think of suicide or death.
1 Feels life is empty or is not worth living.
2 Thinks of suicide/death several times a week for several minutes.
3 Thinks of suicide/death several times a day in depth, or has made specific plans for or attempted suicide.

13. Involvement
0 No change from usual level of interest in other people and activities.
1 Notices a reduction in former interests/activities.
2 Finds only 1 or 2 former interests remain.
3 Has virtually no interest in formerly pursued activities.

14. Energy/fatigability
0 No change in usual level of energy.
1 Tires more easily than usual.
2 Makes significant personal effort to initiate or maintain usual daily activities.
3 Unable to carry out most of usual daily activities due to lack of energy.

15. Psychomotor slowing
0 Normal speed of thinking, gesturing, and speaking.
1 Patient notes slowed thinking, and voice modulation is reduced.
2 Takes several seconds to respond to most questions; reports slowed thinking.
3 Is largely unresponsive to most questions without strong encouragement.

16. Psychomotor agitation
0 No increased speed or disorganization in thinking or gesturing.
1 Fidgets, wrings hands and shifts positions often.
2 Describes impulse to move about and displays motor restlessness.
3 Unable to stay seated; paces about with or without permission.

Enter the highest score on either of the 2 psychomotor items (15 or 16 above): ________

Total Score: ________ (Range 0–27)

For more information on scoring and interpretation, see the correspondence tables available at the IDS-QIDS home page of the University of Pittsburgh Epidemiology Data Center (www.ids-qids.org).
