

vrClinicals for Nursing CURRENTLY IN BETA

Prepare students for the real-world pressures of nursing practice with evolving, multi-patient, virtual clinical experiences.

Co-developed by Wolters Kluwer and Laerdal Medical, **vrClinicals for Nursing** harnesses the immersive power of virtual reality software to bridge a critical gap between nursing education and practice—**clinical judgment and prioritization training**.

Multi-patient virtual experience recreates the real-life pressures of nursing practice with evidence-based scenarios written by the National League for Nursing. vrClinicals delivers a holistic care experience that fosters essential skills in clinical judgment, prioritization, and delegation.

Receive updates and insight from **vrClinicals for Nursing** about VR simulation

vrClinicals for Nursing delivers unmatched clinical authenticity reflecting the unpredictable challenges students will encounter on the job:

- **Multiple patients and diverse, holistic patient cases** that hone students' clinical judgment and delegation skills
- **Interruptions in care** from colleagues, patient relatives, and events in the busy hospital ward that test students' ability to reprioritize
- **Physical interactions**—such as moving to various rooms, acquiring medications and supplies, and using hospital equipment—that train students to manage their time under pressure
