

Blue Steer Studios is delighted to announce that Laura Olson's new album *Moon Trees and Sun Seas* is on its way. Part classical, part synthesized, Laura Olson nudges her listeners to greater frontiers of serious cinematic music. Featuring 10 brand new tracks, her fourth album aims to delight fans of fantasy and symphonic styled music. Deeply personal, it reflects her love of the world above and below us by interweaving reality with imagination.

Enter a world where *Anything* is possible
and *Everything* can be assumed.

Fantasy is everywhere in art, literature, and cinema, full of creatures and environments that only exist in our imaginations. Recent innovations in cinemas and digital technology have allowed us to finally craft these environments into visual and sonic reality. These songs are my own soundscape visions that travel from a dreamily dark and old gaelic world through secret gateways into the light. —Laura Olson (ASCAP)

Laura Olson's previous album releases include the popular *Mossflower Country* (2010) inspired by the award winning RedWall series of youth reader books. Her score for web TV's *Border Guardians of Ackernon* (2011) is composed with large scale orchestrations and choir in the scope of a big-budget feature film. Her third album *Gypsy Road* (2012) takes us to far-away places of musically rich landscapes in Myths and Legends. Her current projects include scoring *Aqua Sports Expeditions*, a soon to be released scuba TV series and sheet music releases of select songs for celtic harp.
