

Shoorah

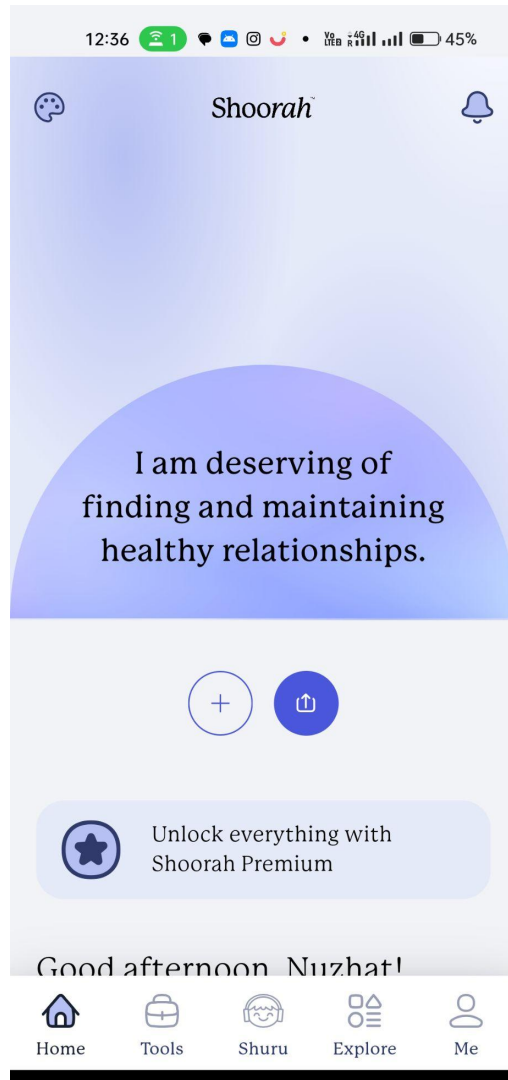

<https://shoorah.io>

Introduction

- Shoorah is an innovative well-being app and website focused on mental health and overall wellness, offering diverse tools to support emotional and mental well-being.
- Its advanced “Shuru” chatbot enhances user engagement with emotional intelligence by assessing users' moods.
- While its therapy tools aids in mood improvement, sleep enhancement, anxiety management, stress reduction, and fostering joyful moments through daily routines by effortlessly monitoring user’s mood and emotions.
- OpenAI's large language model (LLM) power the chatbot in Shoorah, enhancing emotional engagement and user interaction.
- Prompt engineering is used to craft specific queries and responses that optimize user interaction.
- Python is used to process and train the data from Excel sheets, storing it within the Pinecone vector database.
- Pinecone is utilized to store information about the Shoorah organization and its platform. This allows for efficient vector-based retrieval of relevant data.
- Python-based LangChain framework is employed to connect with the Pinecone database via a retrieval chain.
- Used Amazon Polly for shuru voice chatting through python apis.
- Integrated Stripe API for subscription model.
