IV pain medication for headaches, bodyaches & other pain

Vitamin D \$50.00

Boosts Vitamin D levels to support bone health, immune function, and overall well-being.

NAD+ IV THERAPY

NAD+ (Nicotinamide Adenine Dinucleotide) is a vital coenzyme found in every cell of the body that plays a key role in energy production and cellular repair. Levels naturally decline with age, leading to fatigue, brain fog, and signs of aging. Replenishing NAD+ through IV therapy can help boost natural energy, improve mental clarity, support anti-aging processes, and enhance overall cellular health.

NAD+ 50mg Injection	\$70.00
250mg IV	\$279.00
500mg IV	\$499.00
1,000mg IV	\$899.00

NAD+ infusions require a longer administration time (typically 1–3 hours) as they must be delivered slowly for best results. Some clients may experience temporary sensations such as flushing, tightness, or mild nausea; these are generally short-lived and resolve when the drip rate is adjusted.
