Quick Reference Notes

Medication	Key Benefits	Special Considerations
Antihistamine (Benadryl/ Diphenhydramine)	Allergy relief, motion sickness prevention	May cause drowsiness
Amino Acids	Cardiovascular health, energy, longevity	Supports muscle recovery
Anti-Emetic Zofran/Ondansetron	Anti-nausea, vomiting relief	Often used post-surgery or chemotherapy
Vitamin C	Immune booster, collagen production	Antioxidant properties
Carnitine	Fatty acid transport, energy support	May aid in weight management; monitor for GI upset
Steroid (Dexamethasone/Decadron)	Anti-inflammatory, immunosuppressive	Risk of side effects with prolonged use
Glutathione	Detoxification, liver health, skin enhancement	Avoid in chemotherapy patients, may counteract chemo meds.
Antacid (Pepcid/Famotidine)	Acid reflux relief, stomach health	Reduces acid-related irritation
Lysine	Collagen production, immune support	May help prevent herpes simplex outbreaks
Magnesium	Muscle relaxation, cardiovascular support	Helps prevent muscle cramps
MIC	Fat metabolism, weight loss support	Enhances liver function
NAD+	Cellular energy, anti-aging	Avoid in active cancer patients, may increase benign tumor growth
Oxygen	Improves oxygenation, relieves hypoxia	Ensure proper flow rate and safety
NSAID (Toradol/Ketorolac)	Pain relief, anti-inflammatory	Not for long-term use
Vitamin B Complex	Skin health, stress reduction	Essential for energy production
Vitamin B12	Red blood cell formation, nerve function	Increases energy levels
Vitamin D	Bone health, immune support	Aids in calcium absorption
Zinc	Immune function, acne prevention	Reduces inflammation

Note: Always assess patient history and current medications for potential contraindications or interactions.
