

Prompttxt Email 2 SMS version 2.0 US May 2011

Overview

This specification describes how messages must be sent for processing by the Prompttxt email2sms Gateway.

In essence, messages are sent by email, with the "To:" address of the message indicating the recipient mobile number and the prompttxt account.

Messages may only be sent to single recipients, this method does not support bulk sends.

Specification

Emails must be sent in plain text format only.

The Prompttxt account being used must be enabled by Prompttxt to receive messages prior to messages being sent.

Messages are limited to being received from one named domain selected by the user only.

Message Format

The general format for the to address is:

Country CodeRecipient number@user name.prompttxt.com

Example, where the recipient number is 2154356264 and is a US number and the user name is Olympic

12154356264@olympic.prompttxt.com

Set Up Procedure

1. Open an account with prompttxt
2. Email user@prompttxt.com providing the account user name and the from domain to be used requesting email2SMS to be enabled
3. When the account is enabled confirmation will be sent. Allow 2 business days.
4. Only emails sent from the named from domain will be accepted.

Handling Replies

Replies can be forwarded to an email address. The email address is set up in My Profile in the Promptxt account under the heading "E mail Forwarding". Entering an email address automatically switches this feature on, if the field is left blank, replies will only be saved in the inbox.
