

Why Paperspace?

Providing secure access to healthcare records and systems from any location has always been a key challenge for the industry. Paperspace not only makes this possible, it makes it easy. Sharing and managing patient records is faster than any other solution, dramatically increasing quality of care and employee productivity. Our built-in GPUs make medical imaging possible via VDI for the first time.

- GPU accelerated desktops
- Robust permissioning system
- Remote access without VPNs
- Secure communication, encrypted end-to-end
- Simple web-based management console

Medical Imaging - Run a powerful machine in the cloud built for the most demanding applications like Carestream and OsiriX MD.

EHR - Enable instant access to patient information by clinicians using any device, wherever they are.

"We've tried every VDI solution out there and Paperspace just got it right. Some of our IT guys joke that they might be out of a job because even the non-technical folks on our team can manage everything in their dead-simple interface. I couldn't believe the desktops were even remote when I first tested it. Now our employees have secure access to our internal systems from home and on-the-go. Bravo."

- Head of VDI and Technical Services
