

Why Paperspace?

Paperspace provides secure access to your corporate network from any location in a familiar desktop environment. Easily create unique access permissions for a group of employees or control each virtual desktop and shared drive individually. Since nothing is ever stored on an employee device, you don't need to worry about data falling into the wrong hands.

- Remote access without VPNs
- Robust permissioning system
- GPU accelerated desktops for a zero-lag experience
- Secure communication, encrypted end-to-end
- Simple web-based management console

Case Automation - Give your workforce instant access to case information on any device, wherever they are.

Data Management - Improve business agility by combining all applications and data into a familiar desktop experience, anywhere in the world.

"I was skeptical at first but this is so clearly the future. Onboarding new employees used to be such a nightmare getting their new computers configured with all of our applications, files and VPN software. Now, I can create a template with everything pre-configured and two minutes later they're in our system. If they leave, or if God forbid a device gets lost or stolen, I can just deactivate the device in the management console."

- IT Director
