Permit No. 10018, issued on June 18, 2008 (73 FR 36042) and amended on July 14, 2010 (75 FR 43150), authorizes Dr. Cartwright to conduct humpback whale (Megaptera novaeangliae) research, consisting of photo-identification, focal follows, underwater observations, and collection of sloughed skin, in Hawaiian and Alaskan waters from May through September each year. The permit holder is requesting the permit be amended to authorize deployment of: (1) suction cup satellite tags to a maximum of 18 females in female-calf pairs and (2) implantable satellite tags to a maximum of 6 yearling humpback whales, annually. Tagging would only occur in Hawaii. The purposes of the tagging activities are to: (1) verify the impact of research

vessels during boat based behavioral follows, (2) further understand how female-calf pairs use breeding ground habitat, potentially identifying key resting regions and establishing the degree to which female-calf pairs circulate within vs. move between specific favored female-calf regions, and (3) further document the behavioral dynamics of newly-independent yearlings within breeding regions. The amended permit would expire on June 30, 2013.

A draft supplemental environmental assessment (SEA) has been prepared in compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), to examine whether significant environmental impacts could result from issuance of the proposed scientific research permit. The draft SEA is available for review and comment simultaneous with the scientific research permit application.

Concurrent with the publication of this notice in the Federal Register, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: November 15, 2011.
