**SUPPLEMENTARY INFORMATION:**

On December 6, 2011, (Agencywide Documents Access and Management System (ADAMS) Accession No. ML113400015) the NRC published a notice of public meeting (Category 2 Public Meeting to Discuss the Regulatory Basis for Streamlining the Non-power Reactor License Renewal) to be held December 19, 2011. Options being considered in the regulatory basis were provided as an attachment to the meeting notice.

**I. Background**

In Staff Requirements Memorandum (SRM) SRM-SECY-08-0161 (ADAMS Accession No. ML090850159) the Commission directed the staff to develop and submit for Commission review a long-term plan for an enhanced Research and Test reactor (RTR) license renewal process. The Commission advised that this long term plan should consider elements of the generic analysis approach, generic siting analysis, and the extended license term described in SECY-08-0161 (ADAMS Accession No. ML082550140) to establish a stable and predictable regulatory regime for RTRs.

Based on the Commission's direction and the comments received during the public meeting held on September 13, 2011, (ADAMS Accession No. ML112710285), the staff is hosting the December 19, 2011 meeting to discuss the proposed options being considered in development of the regulatory basis for streamlining the non-power license renewal process. The NRC staff will also discuss possible changes to EP requirements for non-power reactors. The NRC notes that the public, licensees, certificate holders, and other stakeholders will have a

future opportunity to comment on the regulatory basis document when it is published in the *Federal Register*.
