k. Description of Request: The licensee requests a temporary variance of the minimum flow requirement in the East Branch Russian River. The licensee states that it is planning to conduct repairs to reconstruct the lower woodstave conduit and replace some adjoining piping above the Potter Valley powerhouse. The licensee states that it needs to dewater the lower portion of the water conveyance system to conduct this work. In order to complete the work, the licensee is requesting a temporary variance of its Normal water year minimum flow requirement of 35 cubic feet per second (cfs) between November 1, 2015 and March 15, 2016. During this time, the licensee proposes to release flows through a conduit into a seasonal creek that is a tributary to the East Branch Russian River immediately downstream of the project powerhouse. The licensee states that during the repair period, it would release a minimum flow of 20 cfs from the conduit into the East Branch Russian River, which would include the release of up to 5 cfs for the Potter Valley Irrigation District. The licensee states that if site conditions reach a Critically Dry water year status, it would instead, maintain the license-required minimum flow of 5 cfs. Finally, the licensee proposes to regularly monitor the interim flows in the seasonal tributary. Upon completion of construction, the licensee states that it would notify the resource agencies and return to the license-required flows.
