## **SUPPLEMENTARY INFORMATION**

### **I. Abstract**

The U.S. Census Bureau plans to request a three-year extension of the current Office of Management and Budget (OMB) clearance of the Survey of Housing Starts, Sales and Completions, also known as the Survey of Construction (SOC). We also plan revisions to the current collection. The SOC collects monthly data on new residential construction from a sample of owners or builders. The Census Bureau uses the Computer-Assisted Personal Interviewing (CAPI) electronic questionnaires SOC-QI/SF.1 and SOC-QI/MF.1 to collect data on start and completion dates of construction, physical characteristics of the structure (floor area, number of bathrooms, type of heating system, etc), and if applicable, date of sale, sales price, and type of financing. The SOC provides widely used measures of construction activity, including the economic indicators Housing Starts and Housing Completions, which are from the New Residential Construction series, and New Residential Sales.

After working with the survey sponsor and key data users, the Census Bureau has decided to add one new data item to the single-family questionnaire regarding ceiling height.

With respect to survey burden, the Census Bureau samples about 1,620 new buildings each month (19,440 per year). Census Bureau staff inquire about the progress of each building multiple times until it is completed (and a sales contract is signed, if it is a single-family house that is built for sale). For single-family buildings, there are an average of 8.11 interviews and for multifamily buildings, an average of 7.0 interviews. The total number of interviews conducted each year for single-family buildings is about 102,186 and for multifamily buildings is about 47,880. Each interview takes 5 minutes on average. Therefore, the total annual burden is 12,506 hours.

## **II. Method of Collection**

The Census Bureau uses its field representatives to collect the data through CAPI.
