SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled “Pregnant Women: Scientific and Ethical Considerations for Inclusion in Clinical Trials.” Currently, collection of safety data on prescription drugs and biological products used during pregnancy usually occurs after approval, and clinicians and patients must undertake a risk-benefit analysis for the use of such products in pregnant women with limited human safety information. Historically, pregnant women have been an understudied population and there have been barriers to obtaining data from pregnant women in clinical trials, including concerns about protecting women and their fetuses from research-related risks. However, data are needed to inform safe and effective treatment during pregnancy, and in certain situations, it is ethically and scientifically appropriate to collect data in pregnant women in clinical trials conducted during drug development.

This draft guidance discusses the ethical and scientific issues when considering the inclusion of pregnant women in clinical trials of drugs and biological products. This draft guidance is intended to advance scientific research in pregnant women, and discusses issues that should be considered within the framework of human subject protection regulations.

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on scientific and ethical considerations for inclusion of pregnant women in clinical trials. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. This guidance is not subject to Executive Order 12866.
