Abstract: The New Source Performance Standards (NSPS) for Petroleum Dry Cleaners (40 CFR Part 60, Subpart JJJ) apply to the following existing and new facilities located at a petroleum dry cleaning plant with a total manufacturers' rated dryer capacity equal to or greater than 38 kilograms (84 pounds): petroleum solvent dry cleaning dryers, washers, filters, stills, and settling tanks. In general, NSPS standards require initial notification reports, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are generally considered essential in determining compliance, and are required of all affected facilities subject to NSPS. For this source category, only recordkeeping and initial notifications and reports are considered essential in determining compliance with 40 CFR Part 60, Subpart JJJ.

Form Numbers: None.

Respondents/affected entities: Petroleum dry cleaners.

Respondent's obligation to respond: Mandatory (40 CFR Part 60, Subpart JJJ).

Estimated number of respondents: 20 (total).

Frequency of response: Initially.

Total estimated burden: 1,850 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$202,000 (per year), which includes \$0 for annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is no change in the burden in this ICR compared to the previous ICR. This is due to two considerations: 1) the regulations have not changed over the past three years and are not anticipated to change over the next three years; and 2) the growth rate for the industry is estimated to remain the same as for the last ICR, so there is no significant change in the overall burden.

Director,
Regulatory Support Division.
