History and description of the remains

In 1973 and 1974, human remains representing, at minimum, two individuals were removed from the Gyer site, in Madera County, CA. The human remains belong to one adult of indeterminate sex and one sub-adult of indeterminate sex. These individuals are represented by two teeth, two tooth fragments, and four bone fragments. No known individuals were identified. The 11 associated funerary objects are one lot of non-human bone fragments, one lot of obsidian flakes, six steatite fragments, two ochre fragments, and one quartz crystal fragment.

A Fresno City College field class excavated the Gyer site, under the supervision of Fresno City College Anthropology instructor Don Wren. In January 2017, during an osteological examination of the faunal collections to determine if human remains were present, the human

remains described in this notice were identified.
