SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled “Human Immunodeficiency Virus-1 Infection: Developing Systemic Drug Products for Pre-Exposure Prophylaxis.” The purpose of this guidance is to provide to sponsors nonclinical and clinical recommendations specific to the development of systemic drug products, with a focus on long-acting systemic drug products (including small molecules and monoclonal antibodies) for the prevention of sexually acquired human immunodeficiency virus-1 (HIV-1) infection. Specifically, this guidance addresses FDA’s current thinking regarding the overall development program and clinical trial designs to support the development of systemic drug products for the prevention of HIV-1 infection. FDA recognizes the challenges in evaluating systemic drug products for the prevention of sexually acquired HIV-1 infection. FDA continues to evaluate possible approaches for the development of new therapies for HIV prevention and will update this guidance if new information becomes available.

This guidance finalizes the draft guidance of the same name issued on June 14, 2018 (83 FR 27782). All public comments received on the draft guidance have been considered and the guidance has been revised as appropriate, along with a few editorial changes.
