Abstract: EPA is required under Section 183(e) of the Clean Air Act to regulate Volatile Organic Compound (VOC) emissions from the use of consumer and commercial products. Under regulations promulgated on February 26, 2007 (72 FR 8428) manufacturers of new portable gasoline containers are required to obtain certificates of conformity with the Clean Air Act, effective January 1, 2009. This ICR covers the burdens associated with this certification process. EPA reviews information submitted in a manufacturer's application for certification to determine if the gasoline container design conforms to applicable regulatory requirements and to verify that

the required testing has been performed. The certificate holder is required to keep records on the testing and collect and retain warranty and defect information for annual reporting on in-use performance of their products. The respondent must also retain records on the units produced, apply serial numbers to individual containers, and track the serial numbers to their certificates of conformity. Any information submitted for which a claim of confidentiality is made is safeguarded according to EPA regulations at 40 CFR 2.201 et seq.

Form Numbers: None.

Respondents/affected entities: Manufacturers of new portable gasoline containers from 0.25 to 10.0 gallons in capacity.

Respondent's obligation to respond: Mandatory (40 CFR part 59, subpart F).

Estimated number of respondents: 8.

Frequency of response: Annually for warranty reports; at least once every five years for certificate renewals.

Total estimated burden: 250 hours (per year). Burden is defined at 5 CFR 1320.3(b)

Total estimated cost: \$27,902 (per year), which includes \$14,010 annualized capital or operation & maintenance costs.

Changes in the Estimates: The number of manufacturers remains at eight and we do not anticipate any net changes in that figure in the next three years. The decrease in anticipated costs is due to the removal of three emissions applications.
