DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 610

[Docket No. FDA-2018-N-4757]

RIN 0910-AH95

Revocation of the Test for Mycoplasma

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is issuing a final rule to remove the specified test for the presence of Mycoplasma for live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures. The rule is being finalized because the existing test for Mycoplasma is overly restrictive in that it identifies only one test method in detail to be used even though other methods also may be appropriate. More sensitive and specific methods exist and are currently being practiced, and removal of the specific method to test for Mycoplasma provides flexibility for accommodating new and evolving technology and capabilities without diminishing public health protections. This action is part of FDA’s implementation of Executive Orders under which FDA is comprehensively reviewing existing regulations to identify opportunities for repeal, replacement, or modification that will result in meaningful burden reduction, while allowing the Agency to achieve our public health mission and fulfill statutory obligations.

DATES: This rule is effective [INSERT DATE 30 DAYS AFTER DATE OF PUBLICATION IN THE FEDERAL REGISTER].
ADDRESSES: For access to the docket to read background documents or comments received, go to https://www.regulations.gov and insert the docket number found in brackets in the heading of this final rule into the “Search” box and follow the prompts, and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Tami Belouin, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993-0002, 240-402-7911.

   A. Introduction
   B. Comments and FDA Response

V. Effective Date
FDA is removing the regulation requiring a specified test for the presence of Mycoplasma for live virus vaccines produced from in vitro living cell cultures and inactivated virus vaccines produced from such living cell cultures because the regulation is overly restrictive in that it identifies only one test method in detail to be used even though other methods also may be appropriate. More sensitive and specific methods exist and are currently being practiced, and removal of the required test for Mycoplasma provides flexibility for accommodating new and evolving technology and capabilities without diminishing public health protections.

B. Summary of the Major Provisions of the Final Rule

The final rule removes § 610.30 (21 CFR 610.30), which details the method for Mycoplasma testing of samples of the virus harvest pool and control fluid pool of live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures.
C. **Legal Authority**

FDA is taking this action under the biological products provisions of the Public Health Service Act (the PHS Act), and the drugs and general administrative provisions of the Federal Food, Drug, and Cosmetic Act (FD&C Act).

D. **Costs and Benefits**

Because this final rule will not impose any additional regulatory burdens, this regulation is not anticipated to result in any compliance costs and the economic impact is expected to be minimal.

II. **Background**

A. **Introduction**

On February 24, 2017, Executive Order 13777, “Enforcing the Regulatory Reform Agenda” (https://www.federalregister.gov/documents/2017/03/01/2017-04107/enforcing-the-regulatory-reform-agenda; 82 FR 12285, March 1, 2017) was issued. One of the provisions in the Executive Order requires Agencies to evaluate existing regulations and make recommendations to the Agency head regarding their repeal, replacement, or modification, consistent with applicable law. As part of this initiative, FDA is revoking a regulation as specified in this final rule.

B. **Need for the Regulation**

It has become increasingly clear that the requirement specifying a test for *Mycoplasma* is too restrictive for live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures because they specify particular methodologies when alternatives may be available that provide the same or greater level of assurance of safety. Modifications to *Mycoplasma* testing described in § 610.30 must meet the requirements of 21 CFR 610.9.
Thus, the Agency believes that the regulation may no longer reflect the current testing procedures as a general matter and that it is more appropriate, flexible, and efficient to identify appropriate testing requirements for particular products in the biologics license application (BLA).

This final rule removes the specified test for the presence of *Mycoplasma* to provide flexibility for accommodating new and evolving technology and capabilities without diminishing public health protections. Removal of this regulation allows manufacturers of live virus vaccines produced from in vitro living cell cultures and inactivated virus vaccines produced from such living cell cultures to select the most scientifically appropriate *Mycoplasma* testing method to assure the safety, purity, and potency of their vaccines.

These newer technologies can result in higher sensitivity and specificity of *Mycoplasma* detection and could reduce the time required to complete testing for *Mycoplasma*. Removal of this regulation does not remove *Mycoplasma* testing requirements specified in individual BLAs. A manufacturer of a live virus vaccine produced from in vitro living cell cultures and inactivated virus vaccines produced from such living cell cultures will continue to be required to follow the *Mycoplasma* test requirements specified in its BLA, unless the BLA was revised to modify or replace the test through a supplement in accordance with § 601.12(c) (21 CFR 601.12(c)). FDA would review proposed changes to a manufacturer’s approved biologics license in the context of that particular application to ensure that any such action is appropriate.

Although the final rule removes the regulation, a manufacturer continues to be required to test for *Mycoplasma* as specified in its BLA. This action provides regulated industry with flexibility, as appropriate, to employ advances in science and technology as they become
available, without diminishing public health protections. As appropriate, the Agency will
describe the appropriate tests for particular products in manufacturers’ BLAs.

*C. Summary of Comments to the Proposed Rule*

We received comments on the proposed rule from individuals and industry submitters.
The comments were generally supportive, with some comments suggesting new testing
procedures be proposed. These comments are further summarized in section IV.

**III. Legal Authority**

We are issuing this final rule under the biological products provisions of the PHS Act (42
U.S.C. 216, 262, 263, 263a, and 264) and the drugs and general administrative provisions of the
FD&C Act (21 U.S.C. 321, 331, 351, 352, 353, 355, 360, 360c, 360d, 360h, 360i, 371, 372, 374,
and 381). Under these provisions of the PHS Act and the FD&C Act, we have the authority to
issue and enforce regulations designed to ensure that biological products are safe, pure, and
potent, and prevent the introduction, transmission, and spread of communicable disease.

**IV. Comments on the Proposed Rule and FDA Response**

*A. Introduction*

We received comments on the proposed rule from individuals and industry submitters.
We describe and respond to the comments in section IV.B. We have combined comments on
similar topics and have numbered each comment to help distinguish between different
comments. The number assigned to each comment or comment topic is purely for organizational
purposes and does not signify the comment's value or importance or the order in which
comments were received.
B. Comments and FDA Response

(Comment 1) One comment requested that FDA not finalize the rule, but instead amend the proposal to revoke the current test for *Mycoplasma*. The commenter proposed that FDA include methodologies on newer tests and how they are distinguishable from the present test; comparable data on the accuracy of *Mycoplasma* detection between the present and newer tests, and any other additional information that would support FDA’s argument that the newer tests are more efficient.

(Response 1) FDA interprets this comment to support the proposal to remove the currently described methodology and to amend the regulation to specify alternative acceptable tests. The purpose of this rulemaking is to permit manufacturers of live virus vaccines produced from in vitro living cell cultures and inactivated virus vaccines produced from such living cell cultures to select the most scientifically appropriate *Mycoplasma* testing method to assure the safety, purity, and potency of their vaccines. Thus, FDA declines to amend the regulation to specify alternative acceptable tests because this would not achieve the goal of allowing flexibility, as appropriate, to employ advances in science and technology as they become available without diminishing public health protections. However, FDA acknowledges that guidance is helpful to describe FDA’s current thinking on alternative methods of testing for *Mycoplasma* in manufacturing samples of live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures. FDA notes that recommended alternative methods for *Mycoplasma* testing for viral vaccines are described in “Guidance for Industry: Characterization and Qualification of Cell Substrates and Other Biological Materials Used in the Production of Viral Vaccines for Infectious Disease Indications” (February 2010) (https://www.fda.gov/media/78428/download).
(Comment 2) One comment supported the proposed rule.

(Response 2) We acknowledge and appreciate the supportive comment.

(Comment 3) One comment did not comment specifically on finalizing the rule, but stated that with changes to technology, it makes sense to update testing procedures. The comment stated that “a list of the new proposed test methods would be beneficial to compare the overall benefits and disadvantages.” Another comment suggested that if the rule is finalized, FDA should provide guidance for alternative methods of testing for Mycoplasma.

(Response 3) While the comment states that it would be helpful to have a list of new proposed test methods, FDA does not believe the regulation should be amended to include such a list because that list could become outdated. License holders are welcome to discuss with FDA proposals to change their existing test methods and to submit proposals to FDA to revise the current test methods in use.

FDA also acknowledges that guidance is helpful to describe FDA’s current thinking on acceptable alternative methods of testing for Mycoplasma in manufacturing samples of live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures. FDA notes that recommended alternative methods for Mycoplasma testing for viral vaccines are described in “Guidance for Industry: Characterization and Qualification of Cell Substrates and Other Biological Materials Used in the Production of Viral Vaccines for Infectious Disease Indications” (February 2010) (https://www.fda.gov/media/78428/download).

(Comment 4) One comment strongly supported removal of the regulation and agreed that more sensitive test methods exist; however, the commenter wanted the scope of the impact to be expanded to include all biological product manufacturers.
(Response 4) We acknowledge and appreciate the supportive comment. The request to expand the revocation to include all biological product manufacturers is beyond the scope of this rule making because § 610.30 pertains to manufacturers of live virus vaccines and inactivated virus vaccines produced from in vitro living cell cultures.

V. Effective Date

The final rule will become effective 30 days after the date of publication in the Federal Register.

VI. Economic Analysis of Impacts

A. Introduction

We have examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, Executive Order 13771, the Regulatory Flexibility Act (5 U.S.C. 601-612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Executive Order 13771 requires that the costs associated with significant new regulations “shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least two prior regulations.” We believe that this final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this rule would increase flexibility and does not add any new regulatory responsibilities, we certify that the final rule will not have a significant economic impact on a substantial number of small entities.
The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before issuing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is $154 million, using the most current (2018) Implicit Price Deflator for the Gross Domestic Product. This final rule would not result in an expenditure in any year that meets or exceeds this amount.

B. Summary of Costs and Benefits

This final rule will amend the biologics regulations under § 610.30 by removing the specified test for Mycoplasma in the production of live virus vaccines produced from in vitro living cell cultures and inactivated virus vaccines produced from such living cell cultures.

Removing the § 610.30 Test for Mycoplasma will provide manufacturers with the flexibility to determine the most appropriate and effective Mycoplasma testing methods. FDA guidance dated after § 610.30, codified in 1973 (November 20, 1973, 38 FR 32056), outlines up-to-date scientific practices to identify Mycoplasma in production of live virus vaccines produced from in vitro living cell cultures and inactivated virus vaccines produced from in vitro living cell cultures. In practice, a vaccine manufacturer can change its procedures at any time with submission and prior approval of a supplement to its BLA. As a result, we do not expect the repeal of the § 610.30 Test for Mycoplasma to significantly influence the behavior or procedures of vaccine manufacturers.

Because manufacturers already have the ability to pursue alternative testing procedures, we anticipate no measurable change in industry or FDA behavior from this final rulemaking. We
therefore expect the elimination of the § 610.30 Test for *Mycoplasma* to be cost neutral. This final rule will therefore produce no quantifiable savings, costs, or transfers. We also expect no public health benefits to be lost as a result of this revocation. Finally, we note that this final rulemaking may drive some manufacturers to streamline their procedures and search for more efficient *Mycoplasma* testing methods. This optimization may produce some unquantifiable efficiencies.

In line with Executive Order 13771, in table 2 we present annualized values of costs and cost savings over an infinite time horizon. There are no quantifiable costs or cost savings from
this rule. This final rule would be considered a deregulatory action under Executive Order 13771.

We have developed a comprehensive Economic Analysis of Impacts that assesses the impacts of the final rule. The full analysis of economic impacts is available in the docket for this final rule (Ref. 1) and at https://www.fda.gov/about-fda/reports/economic-impact-analyses-fda-regulations.

VII. Analysis of Environmental Impact

We have determined under 21 CFR 25.31(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Paperwork Reduction Act of 1995

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

IX. Federalism

We have analyzed this final rule in accordance with the principles set forth in Executive Order 13132. We have determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.
Accordingly, we conclude that the rule does not contain policies that have federalism implications as defined in the Executive Order and, consequently, a federalism summary impact statement is not required.

X. Consultation and Coordination with Indian Tribal Governments

We have analyzed this rule in accordance with the principles set forth in Executive Order 13175. We have determined that the rule does not contain policies that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. Accordingly, we conclude that the rule does not contain policies that have tribal implications as defined in the Executive Order and, consequently, a tribal summary impact statement is not required.

The following reference is on display at the Dockets Management Staff (see ADDRESSES) and is available for viewing by interested persons between 9 a.m. and 4 p.m. Monday through Friday; it is also available electronically at https://www.regulations.gov. FDA has verified the website address, as of the date this document publishes in the Federal Register, but websites are subject to change over time.

List of Subjects in 21 CFR Part 610

Biologics, Labeling, Reporting and recordkeeping requirements.
Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 610 is amended as follows:

PART 610--GENERAL BIOLOGICAL PRODUCTS STANDARDS

1. The authority citation for part 610 continues to read as follows:

Subpart D--[Removed and Reserved]

2. Remove and reserve subpart D, consisting of § 610.30.

Stephen M. Hahn,

Commissioner of Food and Drugs.
