ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA-HQ-OPP-2018-0038; FRL-10011-32]

Inpyrfluxam; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of inpyrfluxam in or on multiple commodities that are identified and discussed later in this document. Valent requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER]. Objections and requests for hearings must be received on or before [INSERT DATE 60 DAYS AFTER DATE OF PUBLICATION IN THE FEDERAL REGISTER], and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the SUPPLEMENTARY INFORMATION).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2018-0038, is available at http://www.regulations.gov or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave., NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805.
Due to the public health concerns related to COVID-19, the EPA Docket Center (EPA/DC) and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on EPA/DC services and docket access, visit https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: Marietta Echeverria, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: RDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).
• Animal production (NAICS code 112).
• Food manufacturing (NAICS code 311).
• Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of EPA’s tolerance regulations at 40 CFR part 180 through the Government Publishing Office’s e-CFR site at
C. How Can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2018-0038 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before [INSERT DATE 60 DAYS AFTER DATE OF PUBLICATION IN THE FEDERAL REGISTER]. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA-HQ-OPP-2018-0038, by one of the following methods:

- **Federal eRulemaking Portal: http://www.regulations.gov.** Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

- **Mail:** OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave., NW., Washington, DC 20460-0001.

- **Hand Delivery:** To make special arrangements for hand delivery or delivery of boxed
II. Summary of Petitioned-For Tolerance

In the Federal Register of March 18, 2019 (84 FR 9735) (FRL-9989-90), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 7F8634) by Valent U.S.A. LLC, 1600 Riviera Avenue, Suite 200, Walnut Creek, CA 94596. The petition requested that 40 CFR part 180 be amended by establishing tolerances for residues of the fungicide inpyrfluxam, S–2399, in or on apple at 0.01 parts per million (ppm); apple, wet pomace at 0.03 ppm; beet, sugar, dried pulp at 0.05 ppm; beet, sugar, molasses at 0.03 ppm; beet, sugar, roots at 0.01 ppm; corn, field, forage at 0.02 ppm; corn, field, grain at 0.01 ppm; corn, field, stover at 0.02 ppm; corn, pop, grain at 0.01 ppm; corn, pop, stover at 0.02 ppm; corn, sweet, kernel plus cob with husks removed at 0.01 ppm; peanut at 0.01 ppm; peanut, hay at 2.0 ppm; rice, grain at 0.01 ppm; rice, bran at 0.02 ppm; rice, hulls at 0.05 ppm; and soybean, seed at 0.01 ppm. That document referenced a summary of the petition prepared by Valent U.S.A. LLC, the registrant, which is available in the docket, http://www.regulations.gov. There were no comments received in response to the notice of filing.

In the Federal Register of May 8, 2020 (85 FR 27346) (FRL-10008-38), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 7F8634) by Valent U.S.A. LLC, 1600 Riviera Avenue, Suite 200, Walnut Creek, CA 94596. The petition requested that 40 CFR part 180 be amended by establishing tolerances for residues of the fungicide inpyrfluxam, S–2399, in or on corn, sweet, stover at 0.02 ppm; corn, sweet, forage at 0.02 ppm; cattle, fat at 0.01 ppm; cattle, meat at 0.01 ppm; cattle, meat byproducts at 0.01 ppm; eggs at 0.01 ppm; goat, fat at 0.01 ppm; goat, meat at 0.01 ppm; goat, meat byproducts at 0.01 ppm; hog, fat at 0.01 ppm; hog, meat at 0.01 ppm; hog, meat
byproducts at 0.01 ppm; horse, fat at 0.01 ppm; horse, meat at 0.01 ppm; horse, meat byproducts at 0.01 ppm; milk at 0.01 ppm; poultry, fat at 0.01 ppm; poultry, meat at 0.01 ppm; poultry, meat byproducts at 0.01 ppm; sheep, fat at 0.01 ppm; sheep, meat at 0.01 ppm; and sheep, meat byproducts at 0.01 ppm. That document referenced a summary of the petition prepared by Valent U.S.A. LLC, the registrant, which is available in the docket, http://www.regulations.gov. A comment was received in response to the notice of filing. EPA’s response to this comment is discussed in Unit IV.C.

Based upon review of the data supporting the petition, EPA is establishing several tolerances at different levels than were requested. The reasons for these changes are explained in Unit IV.D.

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is “safe.” Section 408(b)(2)(A)(ii) of FFDCA defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue....”

Consistent with FFDCA section 408(b)(2)(D), and the factors specified in FFDCA section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant
information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for inpyrfluxam including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with inpyrfluxam follows.

A. Toxicological profile

EPA has evaluated the available toxicity data and considered its validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children.

The target organs of inpyrfluxam are the liver and thyroid (rats, mice, and dogs). Liver effects include increased liver weight, elevated liver enzymes, and increased incidences of diffuse hepatocellular hypertrophy. Thyroid effects include increased incidences of follicular cell hypertrophy.

Decreased motor activity was seen in the acute neurotoxicity study in female rats, but no gross or microscopic morphological changes occurred. There was no neurotoxicity observed in the subchronic neurotoxicity in rats or in any other studies. No dermal hazard was identified in the 28-day dermal toxicity study.

There was evidence of quantitative sensitivity in the developmental toxicity study in rats. In this study, decreased fetal weights were observed at a dose lower than the presence of maternal toxicity. No quantitative susceptibility was observed in the developmental toxicity study in rabbits and the 2-generation reproduction study in rats. In the 2-generation reproduction study in rats, no reproductive effects were observed, and offspring toxicity (decreased pup weights in F1 and F2 generations) was observed in the presence (same dosage) of parental
toxicity (thyroid weight changes and histopathology in P and F1 generations).

In the chronic toxicity/carcinogenicity studies in rats and mice, there was no evidence of carcinogenicity. The mutagenicity battery was negative. Inpyrfluxam is classified as “Not likely to be carcinogenic to humans.”

Specific information on the studies received and the nature of the adverse effects caused by inpyrfluxam as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies can be found at http://www.regulations.gov in the document titled “Inpyrfluxam. Human Health Risk Assessment for the Section 3 Registration Action of the New Active Ingredient, Inpyrfluxam, for Foliar Application on Apple, Peanut, Rice, Soybean, and Sugar Beet; Soil Application on Corn; and Seed Treatment Uses on Canola, Cereal Grains, Legume Vegetables, and Sugar Beet” (hereinafter “Inpyrfluxam Human Health Risk Assessment”) on pages 42-46 in docket ID number EPA-HQ-OPP-2018-0038.

B. Toxicological points of departure/levels of concern

Once a pesticide’s toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level - generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD) - and a safe margin of exposure
(MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/assessing-human-health-risk-pesticide.

A summary of the toxicological endpoints for inpyrfluxam used for human risk assessment can be found in the Inpyrfluxam Human Health Risk Assessment.

C. Exposure assessment

1. Dietary exposure from food and feed uses. In evaluating dietary exposure to inpyrfluxam, EPA considered exposure under the petitioned-for tolerances. EPA assessed dietary exposures from inpyrfluxam in food as follows:

   i. Acute exposure. Quantitative acute dietary exposure and risk assessments are performed for a food-use pesticide, if a toxicological study has indicated the possibility of an effect of concern occurring as a result of a 1-day or single exposure.

   Such effects were identified for inpyrfluxam. In estimating acute dietary exposure, EPA used 2003-2008 food consumption information from the United States Department of Agriculture’s (USDA) National Health and Nutrition Examination Survey, What We Eat in America, (NHANES/WWEIA). As to residue levels in food, the acute analysis assumed tolerance-level residues or higher by combining residues of the parent and residues of the applicable metabolites of concern, adjusting for molecular weight. In addition, the assessment used 100 percent crop treated (PCT) estimates and default processing factors.

   ii. Chronic exposure. In conducting the chronic dietary exposure assessment EPA used
2003-2008 food consumption data from the USDA’s NHANES/WWEIA. As to residue levels in food, the chronic analysis assumed tolerance-level residues or higher by combining residues of the parent and residues of the applicable metabolites of concern, adjusting for molecular weight. In addition, the assessment used 100 PCT estimates and default processing factors.

iii. *Cancer.* Based on the data summarized in Unit III.A., EPA has concluded that inpyrfluxam does not pose a cancer risk to humans. Therefore, a dietary exposure assessment for the purpose of assessing cancer risk is unnecessary.

iv. *Anticipated residue and PCT information.* EPA did not use anticipated residue or PCT information for assessing the inpyrfluxam exposures.

Using the Pesticide Root Zone Model-Variable Volume Water Model (PRZM-VVWM) and Pesticide Root Zone Model-Groundwater (PRZM-GW) models, EPA calculated the estimated drinking water concentrations (EDWCs) of inpyrfluxam for acute and chronic exposures in surface and ground water. EPA used the modeled EDWCs directly in the dietary exposure model to account for the contribution of inpyrfluxam residues in drinking water as follows: 104.5 ppm was used in the acute assessment and 69.5 ppb was used in the chronic assessment.

3. *From non-dietary exposure.* The term “residential exposure” is used in this document
to refer to non-occupational, non-dietary exposure (e.g., for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets).

Inpyrfluxam is not being proposed to be registered for any specific use patterns that would result in residential exposure.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider “available information” concerning the cumulative effects of a particular pesticide's residues and “other substances that have a common mechanism of toxicity.”

Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, EPA has not made a common mechanism of toxicity finding as to inpyrfluxam and any other substances, and inpyrfluxam does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has not assumed that inpyrfluxam has a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at [http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides](http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides).

D. Safety factor for infants and children

1. *In general.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will
be safe for infants and children. This additional margin of safety is commonly referred to as the FQPA Safety Factor (SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* In the developmental toxicity study in rats, decreased fetal weights were observed at a dose lower than the presence of maternal toxicity. No quantitative susceptibility was observed in the developmental toxicity study in rabbits and the 2-generation reproduction study in rats. In the 2-generation reproduction study in rats, no reproductive effects were observed, and offspring toxicity (decreased pup weights in F1 and F2 generations) was observed in the presence (same dosage) of parental toxicity (thyroid weight changes and histopathology in P and F1 generations).

3. *Conclusion.* EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1X. That decision is based on the following findings:

i. The toxicity database for inpyrfluxam is complete.

ii. Decreased motor activity was observed in females in the acute neurotoxicity study; however, no neurotoxicity was observed in the subchronic neurotoxicity or in any other studies in the inpyrfluxam database; therefore, a developmental neurotoxicity study was not needed with the absence of neuropathology.

iii. In the 2-generation reproduction study in rats, no reproductive effects were observed, and offspring toxicity (decreased pup weights in F1 and F2 generations) was observed in the presence of parental toxicity (thyroid weight changes and histopathology in P and F1 generations). Although there were developmental effects (decreased fetal weights) in the
developmental study in rats in the absence of maternal toxicity, a clear NOAEL and LOAEL were identified, and the PODs selected for risk assessment purposes are protective of the developmental effects seen in the database.

iv. There are no residual uncertainties identified in the exposure databases. The dietary food exposure assessments were performed based on 100 PCT and anticipated residues to account for the metabolites of concern. EPA made conservative (protective) assumptions in the ground and surface water modeling used to assess exposure to inpyrfluxam in drinking water. These assessments will not underestimate the exposure and risks posed by inpyrfluxam.

E. Aggregate risks and determination of safety

EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute PAD (aPAD) and chronic PAD (cPAD). For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate PODs to ensure that an adequate MOE exists.

1. Acute risk. Using the exposure assumptions discussed in this unit for acute exposure, the acute dietary exposure from food and water to inpyrfluxam will occupy 6.4% of the aPAD for all infants less than one year old, the population group receiving the greatest exposure.

2. Chronic risk. Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to inpyrfluxam from food and water will utilize 1.7% of the cPAD for children 1 to 2 years old, the population group receiving the greatest exposure. There are no residential uses for inpyrfluxam.

takes into account short- and intermediate-term residential exposure plus chronic exposure to
food and water (considered to be a background exposure level).

Short- and intermediate-term adverse effects were identified; however, inpyrfluxam is not
being proposed to be registered for any use patterns that would result in either short- or
intermediate-term residential exposure. Short- and intermediate-term risk is assessed based on
short- and intermediate-term residential exposure plus chronic dietary exposure. Because there is
no short- or intermediate-term residential exposure and chronic dietary exposure has already
been assessed under the appropriately protective cPAD (which is at least as protective as the
POD used to assess short-term risk), no further assessment of short- or intermediate-term risk is
necessary, and EPA relies on the chronic dietary risk assessment for evaluating short- and
intermediate-term risk for inpyrfluxam.

4. Aggregate cancer risk for U.S. population. Based on the lack of evidence of
carcinogenicity in two adequate rodent carcinogenicity studies, inpyrfluxam is not expected to
pose a cancer risk to humans.

5. Determination of safety. Based on these risk assessments, EPA concludes that there is
a reasonable certainty that no harm will result to the general population, or to infants and
children from aggregate exposure to inpyrfluxam residues.

IV. Other Considerations

A. Analytical enforcement methodology

The petitioner has proposed a multi-residue method (quick, easy, cheap, effective, rugged
and safe; QuEChERS; Method No. VP-393940) for the determination of inpyrfluxam in plant
commodities. For livestock commodities, adequate enforcement methodology using the high
performance liquid chromatography with tandem mass detection (HPLC-MS/MS, or LC-
MS/MS) is available for determination of residues of inpyrfluxam and its metabolites.

The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755-5350; telephone number: (410) 305-2905; email address: residuemethods@epa.gov.

B. International residue limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint United Nations Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The Codex has not established any MRLs for inpyrfluxam.

C. Response to comments

One comment was received to the notice of filing that stated in part “ban use of valent inpyrfluxam [sic] on corn cattle meat and other sites.”

Although the Agency recognizes that some individuals believe that pesticides should be banned on agricultural crops, the existing legal framework provided by section 408 of the Federal Food, Drug and Cosmetic Act (FFDCA) authorizes EPA to establish tolerances when it determines that the tolerance is safe. Upon consideration of the validity, completeness, and
reliability of the available data as well as other factors the FFDCA requires EPA to consider, EPA has determined that these inpyrfluxam tolerances are safe. The commenter has provided no information supporting a contrary conclusion.

D. Revisions to petitioned-for tolerances

Some of the proposed commodity definitions for the tolerances being established are different than requested to be consistent with Agency nomenclature. EPA is not establishing a tolerance for residues in/on rice hulls as requested; it is not necessary as rice hulls are no longer considered a significant livestock feedstuff. Also, residues were less than the LOQ in the processed commodities at exaggerated rates; therefore, a tolerance for rice bran is not required. No separate tolerance is needed for apple, wet pomace since the residues on pomace will be adequately covered by the tolerance on “apple” due to a lack of concentration during processing. Similarly, no separate tolerances are needed for sugar beet molasses or sugar beet dried pulp since residues on those commodities will be adequately covered under “beet, sugar, roots.” Finally, EPA revised the tolerance value for “peanut, hay” from 2.0 ppm (as requested) to 2 ppm, to be consistent with OECD’s rounding class practices.

V. Conclusion

Therefore, tolerances are established for residues of inpyrfluxam, including its metabolites and degradates, in or on the following plant commodities: apple at 0.01 ppm; beet, sugar, roots at 0.01 ppm; corn, field, forage at 0.02 ppm; corn, field, grain at 0.01 ppm; corn, field, stover at 0.02 ppm; corn, pop, grain at 0.01 ppm; corn, pop, stover at 0.02 ppm; corn, sweet, kernel plus cob with husks removed at 0.01 ppm; corn, sweet, forage at 0.02 ppm; corn, sweet, stover at 0.02 ppm; peanut at 0.01 ppm; peanut, hay at 2 ppm; rice, grain at 0.01 ppm; and soybean, seed at 0.01 ppm.
Also, tolerances are established for residues of inpyrfluxam, including its metabolites and degradates, in or on the following livestock commodities: cattle, fat at 0.01 ppm; cattle meat at 0.01 ppm; cattle, meat byproducts at 0.01 ppm; egg at 0.01 ppm; goat, fat at 0.01 ppm; goat, meat at 0.01 ppm; goat, meat byproducts at 0.01 ppm; hog, fat at 0.01 ppm; hog, meat at 0.01 ppm; hog, meat byproducts at 0.01 ppm; horse, fat at 0.01 ppm; horse, meat at 0.01 ppm; horse meat byproducts at 0.01 ppm; milk at 0.01 ppm; poultry, fat at 0.01 ppm; poultry, meat at 0.01 ppm; poultry, meat byproducts at 0.01 ppm; sheep, fat at 0.01 ppm; sheep, meat at 0.01 ppm; and sheep meat byproducts at 0.01 ppm.

VI. Statutory and Executive Order Reviews

This action establishes tolerances under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997), nor is it considered a regulatory action under Executive Order 13771, entitled “Reducing Regulations and Controlling Regulatory Costs” (82 FR 9339, February 3, 2017). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 et seq.), nor does it require any special considerations under Executive Order 12898, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).
Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 et seq.).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 et seq.), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule.
in the *Federal Register*. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

**List of Subjects in 40 CFR Part 180**

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

**Edward Messina,**

*Acting Director, Office of Pesticide Programs.*
Therefore, 40 CFR chapter I is amended as follows:

PART 180--[AMENDED]

1. The authority citation for part 180 continues to read as follows:

   **Authority:** 21 U.S.C. 321(q), 346a and 371.

2. Add §180.712 to subpart C to read as follows:

**§ 180.712 Inpyrfluxam; tolerances for residues.**

   (a) **General.** (1) Tolerances are established for residues of the fungicide inpyrfluxam, including its metabolites and degradates, in or on the commodities in Table 1 to this section. Compliance with the tolerance levels specified in Table 1 to this section is to be determined by measuring only inpyrfluxam (3-(difluoromethyl)-N-[(3R)-2,3-dihydro-1,1,3-trimethyl-1H-inden-4-yl]-1-methyl-1H-pyrazole-4-carboxamide), in or on the following commodities:

   (2) Tolerances are established for residues of inpyrfluxam, including its metabolites and degradates, in or on the commodities in Table 2 to this section. Compliance with the tolerance levels specified in Table 2 to this section is to be determined by measuring the free and
conjugated forms of the sum of inpyrfluxam (3-(difluoromethyl)-N-[3(R)-2,3-dihydro-1,1,3-trimethyl-1H-inden-4-yl]-1-methyl-1H-pyrazole-4-carboxamide, and its metabolites 3-(difluoromethyl)-N-[1’-(hydroxymethyl)-(1’S,3’R)-1’,3’-dimethyl-2’,3’-dihydro-1’H-inden-4’-yl]-1-methyl-1H-pyrazole-4-carboxamide and 3-(difluoromethyl)-N-[1’-(hydroxymethyl)-(1’R,3’S)-1’,3’-dimethyl-2’,3’-dihydro-1’H-inden-4’-yl]-1-methyl-1H-pyrazole-4-carboxamide, calculated as the stoichiometric equivalent of inpyrfluxam, in or on the commodity:
