

CapitalGainsReport Momentum Watchlist: Stocks On The Run (EPAZ, TTCM, FFIE, THMO)

NEWS RELEASE BY RAZORPITCH EPAZ

Naples, FL | March 16, 2023 05:00 AM Eastern Daylight Time

Investing in penny stocks is a high-risk, high-reward endeavor that can offer significant returns for those who are willing to take a chance. One of the essential factors to consider when trading penny stocks is momentum, the upward trend that can propel a stock to new heights.

While investing in penny stocks can be risky, the potential for substantial gains is what makes it so exciting. With careful research, analysis, and a willingness to take calculated risks, investors can identify promising opportunities and potentially profit from the momentum of these exciting companies.

When momentum builds behind a penny stock, it can quickly gain value and experience big gains, making it worth paying attention to in order to gauge its potential future trajectory. For investors looking to capitalize on these gains and potentially reap substantial rewards, keeping a close eye on these four stocks and their performance in the coming days and weeks is essential.

The first company is **Epazz, Inc. (OTC: EPAZ)**, which on Wednesday closed up 29.57%. Epazz is an innovative company leading the way in cutting-edge drone technology, blockchain mobile apps, and cloud-based business software solutions that are vital to modern businesses.

Recently, the EPAZ spinoff ZenaDrone announced that their groundbreaking AI-predictive drone Smart Charging Pad has recently been granted a utility patent from the US Government, which will also pave the way for international patents to be filed in countries such as Ukraine, the United Kingdom, the European Union, Canada, Australia, South Africa, and Brazil, opening up even more business opportunities for Epazz Inc.

The utility patent covers the ZenaDrone Smart Charging Pad, a game-changer in the drone charging industry, providing a more affordable solution for charging drones that weigh over 250 pounds.

Currently, the charging options on the market include competitors who charge exorbitant prices for drone chargers only capable of charging drones weighing less than 55 pounds, ranging from \$4,000 to \$15,000. However, the ZenaDrone Smart Charging Pad, which can charge the ZenaDrone 1000, which weighs over 250 pounds, will be priced at less than \$15,000, making it significantly more affordable than the competition and more capable.

With its advanced technology and environmentally friendly design, the ZenaDrone Smart Charging Pad is capable of understanding and learning from its surroundings and selecting the optimal energy source, making it an appealing choice for businesses operating in remote areas.

Equipped with updated AI predictive automation software, the ZenaDrone 1000 is specifically designed for use in the military, as well as oil and gas, and agriculture industries. Moreover, Epazz recently submitted Phase 1 SBIR proposals to the U.S. government, which could result in significant government contracts worth up to \$15 million over the next three years if the company is selected in the process.

The banning of Chinese-made drones within the US government has opened up significant opportunities for the company. Epazz CEO Shaun Passley, Ph.D., said, "We are taking multiple pathways to become a government contractor of drones. It is a major opportunity for us, as Chinese drones are banned in the US government. It has opened up major demands for our drones."

The US government has a major need for non-Chinese drones. The government is pushing initiatives to obtain made-in-America drones through its BlueUAS program. ZenaDrone is currently in the process of applying for BlueUAS. According to the company, the current list of American-made drones is very short.

For investors looking for a profitable opportunity in a quickly expanding market, Epazz is a promising penny stock due to its competitive pricing, state-of-the-art technology, and rising demand. Investing in Epazz could have the potential to provide substantial returns for those who are quick to seize this opportunity.

Another potential momentum play from Wednesday is **Tautachrome, Inc. (OTC:TTCM)**, which finished the day up 55.56%. Tautachrome is a technology-driven company that specializes in the development of cutting-edge Internet applications.

TTCM is an early-stage Internet applications company that is actively involved in a variety of business and technology development initiatives, such as KlickZie ARknet technology, KlickZie's blockchain trading currency ecosystem, and KlickZie-activated digital imagery businesses. In addition, TTCM provides augmented reality, smartphone-image authentication, and imagery-based social networking interaction services.

The gains on Wednesday followed an 8-K filing, detailing an exchange between El Dorado Family Group, Ltd., and Tautachrome. El Dorado Group receives 5,000,000 shares of "Series H Preferred Stock" from Tautachrome Inc. in exchange for a Royalty-Free Grant of Exclusive Use-license of certain intellectual properties having appraised value of \$514,441,340.

Keep TTCM on your watchlist to see if the stock can carry its momentum through the week.

Faraday Future Intelligent Electric Inc. (NASDAQ: FFIE), a California-based global shared intelligent electric mobility ecosystem company, rose 9.59% on Wednesday. Faraday Future is a

disruptor of the conventional ultra-luxury car civilization and a leader in the market for the most advanced intelligent tech-luxury ultra-smart vehicles in the intelligent EV era.

On the 14th, the company issued a statement stating that they are aware of the current news and reports surrounding Silicon Valley Bank's liquidity concerns and that they do not have any cash or cash equivalents on deposit at Silicon Valley Bank and don't have any other direct relationship with Silicon Valley Bank.

The update also verified that FFIE's U.S. operations now have a dealer license from the State of California. FFIE expects to go to market using a unique direct sales model. Faraday Future also confirmed that they will hold their final launch event for the FF-9 Futurist electric vehicle on April 26, 2023.

Though in a different price sector than the rest of the stocks, one that was on fire on Wednesday was **ThermoGenesis Holdings Inc. (NASDAQ:THMO)**. ThermoGenesis Holdings' shares experienced a significant surge of up to 98.59% by the end of trading on Wednesday, following the company's announcement of its plan to introduce 12 ReadyStart current Good Manufacturing Practices (cGMP) suites in Rancho Cordova, California. These suites will cater to early-stage cell and gene therapy companies.

This move represents a significant milestone in THMO's transformation from a medical-device company to a contract development and manufacturing organization in the gene-editing field. According to ThermoGenesis, if fully occupied, the 35,500-square-foot facility could generate \$10 million to \$16 million in annual revenue. The company anticipates that the suites will be available to customers in the second or third quarter of 2023.
