

Carbon Capture and Storage Panel Session at the Clarivate Virtual Innovation Forum

NEWS RELEASE BY CLARIVATE

Northampton, MA | July 23, 2021 10:01 AM Eastern Daylight Time

At this year's **Clarivate Virtual Innovation Forum**, Marilyn Johnson, Sr. Director of Global Sustainability at Clarivate, moderated a panel session about carbon capture and storage as the way forward for companies.

At Clarivate, sustainability is at the heart of everything we do. We help companies innovate for a better future worldwide while operating to the highest social, environmental and ethics standards.

Marilyn Johnson opened the session saying that “we are at a stage today where simply reducing our emissions will not get us to our goals. We must additionally employ negative energy technologies and other green alternatives as well.” She added, “to achieve net-zero emissions will require ambitious orchestration of government, policy, investment and sector cooperation.”

Collaboration and education are key to achieving carbon goals. Touching upon a delicate yet vital topic of Carbon Capture & Storage (CCS) under the umbrella of sustainability, Dr. Marc Vermeersh, Executive Director at Qatar Environment and Energy Research Institute (QEERI), Mike Brady, Chief Commercial Officer and Board Director & Secretary at Trillion LLC and Mariia Bogomolova, Head of IP at SIBUR, took part in the panel session.
