

Dear America, Mission Possible: Prevention and Cures Starts Now

The Right Model is Indisputably In Place

NEWS RELEASE BY THE AMERICAN CENTER FOR CURES

CHICAGO | April 19, 2023 01:33 PM Eastern Daylight Time

I hope this letter finds you and your family in good health. The exceptional leadership and resilience of this nation has been an inspiration to Dr. Rick Boxer and me, prompting us to embark on a **vital mission** that resonates with every American, regardless of wealth, race, or political affiliation: combating disease.

Despite our nation's efforts, we have not achieved the level of prevention and cures necessary to alleviate the suffering and burden of diseases that affect us all. It is time for a paradigm shift, and we believe that every American is in a unique position to help drive this transformation.

The American Center for Cures, which we co-founded, aims to establish a fully funded private-sector mission dedicated to preventing and curing the most devastating diseases, such as Alzheimer's, Parkinson's, various forms of cancer, heart disease, diabetes, and all other diseases including orphan diseases. Our vision is to assemble the most successful CEOs in America to lead individual centers focused on these diseases, with each center receiving \$36 billion in funding.

By combining resources, leadership, focus, and a sense of urgency, we believe we can create a new era in disease prevention and cures. This effort has the potential to be the most significant legacy issue of our lifetimes, impacting not only American families but also the global community.

We humbly request Corporate America's public endorsement and the social support of the American People to provide hope to millions and promote a business-like model of accountability that is currently lacking. Furthermore, we encourage you to urge every member of Congress and the White House to expedite their support for this initiative. We are not merely asking for their backing; we are insisting on it. This mission is for you, your children, and future generations.

It is likely that you and your loved ones have been personally affected by a disease that should no longer exist. By embracing this mantle of leadership today, we can make a lasting impact on the lives of countless individuals.

Former Secretary of Health Tom Price has stated that the American Center for Cures could rival the greatest achievements in American history. My partner, Dr. Rick Boxer, was recently appointed to the National Cancer Advisory Board by President Biden. We need your voice and skills now more than ever.

We commend the extraordinary work of researchers around the world and their commitment to delivering cures. However, a systemic issue exists within the medical use authorization and approval process, and it delays getting cures into the hands of the people who need them now. We're on the cusp of curing pancreatic, breast, and brain cancer, as well as preventing heart attacks but the current model, because of economic- and process -related obstacles, does not accommodate success.

The American Center for Cures is offering a solution to this problem by providing a mission, funding, responsibility, accountability, and leadership, will fundamentally restructure and speed the process of working with the FDA and all relevant parties for authorized cures. Just like the speed of getting the COVID vaccine approved and authorized for use, American Center for Cures is committed to bringing new cures and treatments to patients as quickly and efficiently as possible. We believe that now is the time to harness our global technological advances to establish a process and urgency that will bring these pieces together for the betterment of humanity.

By acting today, we can create a lasting legacy in the fight against disease. We are **Unity Strong!**

Best regards,

Lou Weisbach Co-founder, The American Center for Cures

About American Center for Cures

The American Center for Cures (ACC) initiative is a fully funded mission to prevent, treat or cure diseases that plague every American family. The initiative will be funded by the sale of \$750B bonds by the Federal Reserve, providing the capital needed to accelerate the current trajectory of medicine. Annual interest will be paid through the licensing of new compounds and drugs to pharmaceutical companies. The principal will be repaid by savings provided to the United States Government through successes in the areas of prevention and cures. The ACC business model will cost the government and taxpayers nothing, making this the single most impactful investment on behalf of the American people in the nation's history.
