

DuPont Performance Building Solutions and Corian® Design Reaffirms Commitment to Climate Action and Invites Partners to Help 'Build the Future'

NEWS RELEASE BY DUPONT

Northampton, MA | October 25, 2021 10:02 AM Eastern Daylight Time

There's no place like home. And our home – our planet – is changing. DuPont Performance Building Solutions (PBS) and Corian® Design knows that avoiding the worst impacts of climate change will not be possible without the deep commitment from the building industry.

In 2020, DuPont Performance Building Solutions and Corian® Design **committed** to reducing the greenhouse gas (GHG) emissions from its operations by 75 percent by 2030 (based on 2019 levels). This goal supports DuPont's corporate **Acting on Climate** goal to achieve a 30 percent GHG reduction in its operations by 2030 (relative to 2019) and to achieve carbon neutrality by 2050.

"The recent U.N. Intergovernmental Panel on Climate Change (IPCC) report made it clear how important it is that we act urgently to combat climate change," said Shawn Hunter, Global Sustainability Director, DuPont Performance Building Solutions and Corian® Design. "The built environment – the places where we live, learn, work, and gather – accounts for nearly 40 percent of global greenhouse gas emissions. We need to work together within the building industry to deliver the products and solutions that will be critical to help avoid the worst impacts of climate change and reach net-zero by mid-century if not sooner."

DuPont Performance Building Solutions and Corian® Design is not continuing with business as usual, instead resolving to take risks, set goals, and work to equip the industry

to turn the tide on global emissions. As part of the business's strategy, it launched **this video** to invite partners to collaborate, commit, and innovate together.

"We know collaboration throughout the industry is the only way we will be able to do the hard work needed in the built environment to get climate right in this pivotal decade of climate action," said Hunter. "We are starting a dialogue around current solutions and new innovations, so we can better tackle these issues and mitigate climate change together. At DuPont we're committed to building better, and to innovating as if our future depends on it – because it does."
