Identity Access Management Platform Incubated by BTblock Launches First Product Offering

NEWS RELEASE BY FYEO

NEW YORK | June 23, 2021 09:00 AM Eastern Daylight Time

FYEO Inc., a threat monitoring and identity access management platform, today announced its exit from stealth mode with its first B2B product offering, FYEO Domain Intelligence (“FYEO DI”), and the acquisition of threat intelligence firm Intelliagg.

Incubated by enterprise technology and cybersecurity consultancy BTblock, FYEO has been in stealth developing its platform to serve both the B2B and the B2C markets. As its primary B2B offering, FYEO DI will provide domain, credential and threat monitoring services to the enterprise and SMB market. The second offering, FYEO Identity, will provide password management and identity intelligence capabilities to both the enterprise and consumer markets and is set for release in H2 2021.

As a leading threat intelligence company working with global enterprise clients to control or evade data loss, reputational damage and targeted cybercrime through the provision of machine learning-based intelligent threat detection, the Intelliagg acquisition marks a significant advance for FYEO. In addition, Intelliagg delivers a suite of professional and managed services dealing with cyber threat intelligence and incident response management.

“The close fit between the offerings of FYEO and Intelliagg substantially enhance our capabilities for current clients and is expected to drive greater enterprise adoption,” said Brian Gale, FYEO CEO and BTblock co-founder. “Looking to the future, FYEO’s active database of over 20 billion leaked credentials and cracked passwords will provide immediate insight to businesses and complement our expanded threat monitoring services.”

Intelliagg’s IP and code base have been integrated into FYEO DI with the goal of elevating its automation capabilities for reporting and alerting FYEO DI clients when threats might occur. FYEO DI clients are being supported by the BTblock cybersecurity solutions and research practice as a managed services offering, with Managing Director Mikael Björn directing enterprise client engagement.

“Through the Intelliagg acquisition, we both supplement the FYEO DI technology stack and gain access to their expertise, industry knowledge and client base,” said Thomas Olofsson, FYEO CTO and BTblock co-founder. “By leveraging BTblock consulting relationships, we can quickly assess

the needs firms have for both FYEO DI and FYEO Identity and deliver immediate insight, preventative cyber threat intelligence and necessary remediation action plans.

FYEO is also announcing the formation of an advisory board, with initial members **Scott J. Carlson**, Kudelski Group Director of Global Architecture & Strategy, Head of Digital Asset Security; and **Ace St Germain**, Chief Product Officer at GLHF.gg and former Head of Content Programming at Twitch, an Amazon owned company.
