

# Power Nickel releases positive drill results from Nisk project showing mineralization extension

NEWS RELEASE BY POWER NICKEL INC

**Vancouver | March 02, 2023 07:04 AM Eastern Standard Time**

Power Nickel Inc CEO Terry Lynch joined Proactive's Steve Darling to share more drill results from the 2022 Phase 2 drill program at its Nisk project in Quebec.

Lynch told Proactive the latest results have confirmed the presence of high-grade nickel, copper, and cobalt in the main zone. The company noted that mineralization extends by an additional 150 metres at depth and to the east and below the central portion at the project. Power Nickel hopes to have a 43-101 technical report out in June or July of this year, he added.
