Serenity Shield Signs an Extended Partnership with Archethic

Singapore | December 22, 2022 01:50 PM Eastern Standard Time

Serenity Shield, a decentralized application platform that offers an innovative, revolutionary approach to crypto inheritance and secure storage solutions for sensitive data, is pleased to announce the signing of an extended partnership with the technology group **Archethic**.

As part of the partnership, Serenity Shield will integrate their product, the StrongBox®, into Archethic's public blockchain and utilize their interoperable Decentralized Identity (DID) management solution to provide an additional layer of security to end-users.

The addition of Archethic blockchain will offer considerable value to Serenity Shield's existing solution due to its speed, scalability, extreme security, environmental friendliness, and focus on decentralization. Moreover, this collaboration helps strengthen Serenity Shield's cross-chain and interoperability aspirations and capabilities.

Moreover, embedding Archethic's DID technology within the StrongBox® is a logical progression in the development of Serenity Shield and a step forward in its desire to offer an entirely decentralized and self-sovereign solution to its customers.

"We are thrilled to go deeper and extend our partnership with Archethic," said Rodolphe Seynat, Co-Founder of Serenity Shield. "Archethic's mission and values are aligned with those of Serenity Shield around digital and human rights: we mutually defend the idea that identity is not just about ownership, but about control and freedom. We look forward to working with them."

About Serenity Shield

Serenity Shield was established in 2021 as a result of identifying a glaring and, as yet, unaddressed need in the global cryptocurrency market for the provision of secure access to and transfer of ownership of digital wallets. Leveraging advances in cryptography and private blockchain technology, it has designed a secure, non-custodial method to store and retrieve sensitive data for individuals but also corporates and institutions.
