

Protect Every Paw: Hospital-Grade Sanitization for Superior Animal Care

Spraymaster's hassle-free, built-in cleaning systems safeguard your animals, staff, and reputation

Stop the spread: Don't give diseases a chance

Contagious diseases can spread rapidly through contaminated surfaces. Inadequate sanitation practices jeopardize animal health and violate the Animal Welfare Act's requirement for daily kennel disinfection.¹

Spraymaster delivers hospital-grade sanitization that ensures the well-being of every animal under your care and frees up your staff to focus on what matters most: superior animal care.

Clean you can count on!

Cheap pressure washers aren't built to last. It's time to upgrade!

Spraymaster is rated for more than 10,000 hours of operation – up to 20x longer than retail pressure washers. Made from industrial parts that are easy to service and repair, we stand behind our products.

Effortless, precise chemical control

If your cleaning chemicals are too weak, germs stick around. Too strong, and you're wasting product, leaving floors slick with injuries.

Spraymaster systems come with adjustable chemical dilution. An easy turn of the knob gets you the exact amount you need for kennel sanitization.

Trade the mop for some real muscle

A mop and bucket simply push dirt around and miss more than half of the germs and bacteria in your facility.²

Stop the mop! Spraymaster spray physically removes bacteria, urine and other 'presents' pets may leave behind.

Fast, effective and ready when you need it

Spraymaster is hassle free and ready when you are. Our customized built in systems clean both indoors and outdoors. Works just like a central vac with remote stations.

Simply connect, select chemical or rinse and conquer messes with ease.

No dirty mop and bucket. No dragging equipment. No cleaning product guesswork. Just fast, effective cleaning with zero elbow grease.

Spraymaster builds durable, easy to use pressure washing systems that get the job done – inside and outside. Our commercial-grade products are built to last, ready for daily use, and can be customized to fit your space.
