

Software, Simulations and Graphics

Angelica Garcia NASA/JSC
Simulation and Graphics Capability Manager

Who is Angelica?

- B.S. in Aerospace Engineering
 - Embry-Riddle Aeronautical University
 - Gulfstream Aerospace Co-Op (5 terms)
- M.S. in Modeling and Simulation
 - University of Central Florida
 - Simulation Software Engineer at Dynamic Animation Systems
 - NASA LaRC Summer VR Simulation Intern
- CACI/NASA Simulation and Software Lead
 - Maintain, develop and deploy training simulation systems for instructor and astronaut certification, mission analysis and planning.
- NASA Simulation and Graphics Capability Manager
 - Support and help manage multiple facilities and teams that develop, maintain and operate simulation systems
 - Optimize the way all the simulation facilities operate
 - Standardize processes across all facilities
 - Promote consistency and reuse in all simulation and graphics tools and capabilities across facilities

NASA Organization and Supporting Programs

ER is the Software, Robotics, and Simulation Division is responsible for defining requirements, analyzing, designing, assembling, integrating, testing, evaluating, verifying, operationally supporting, and managing current and advanced software and hardware systems, in the areas of automation, robotics, flight software, simulation, graphics, and exercise equipment for human surface and space flight operations.

ER supports the International Space Station, Gateway, Orion, Space Launch System (SLS), Human Landing System (HLS), Surface Mobility, xEMU (Suit), Commercial Cargo, Commercial Crew and more...

We are Going...to the MOON!

We're going back to the Moon for scientific discovery, economic benefits, and inspiration for a new generation of explorers: the Artemis Generation. While maintaining American leadership in exploration, we will build a global alliance and explore deep space for the benefit of all.

With Artemis missions, NASA will land the first woman and first person of color on the Moon, using innovative technologies to explore more of the lunar surface than ever before. We will collaborate with commercial and international partners and establish the first long-term presence on the Moon. Then, we will use what we learn on and around the Moon to take the next giant leap: sending the first astronauts to Mars.
