1. Effct of this experiment

You will realize
2. Preparation

Planetary mass
-

Universal G force
Unversal G force

Planetary revolution radius

Change the actual value to a value suitable for the experiment

|  | mass $\left(\times 10^{21} \mathrm{~kg}\right)$ | Revolition radius $\left(\times 10^{4} \mathrm{~km}\right)$ | Universal gravitation (N) |
| :--- | ---: | ---: | ---: |
| Mercury | 330.2 | 5790 | $9.85 \times 10^{7} \mathrm{GM}$ |
| Venus | 4868.5 | 10800 | $4.17 \times 10^{8} \mathrm{GM}$ |
| PlanetX | 2986.8 | 12880 | $1.80 \times 10^{8} \mathrm{GM}$ |
| Earth | 5973.6 | 14960 | $2.67 \times 10^{8} \mathrm{GM}$ |
| Mars | 641.85 | 22790 | $1.24 \times 10^{7} \mathrm{GM}$ |

|  | mass $(\mathrm{g})$ | Revolition radius $(\mathrm{m})$ | Universal gravitation $(\mathrm{gw})$ |
| :--- | ---: | ---: | ---: |
| Mercury | 5.53 | 0.174 | 99.1 |
| Venus | 81.5 | 0.325 | 422 |
| PlanetX | 50 | 0.388 | 182 |
| Earth | 100 | 0.45 | 270 |
| Mars | 10.7 | 0.685 | 12.5 |

G;Gravitational constant M;mass of the sun
3. Experimental method

Fig. 1 Experiment
4. Planet type

1. Have a glass tube
2. Do not touch threads or weights
3. Spin above the head
4. Spin fast enough so that the black mark stabilizes at the top of the glass tube
5. Measure the time of 10 revolutions

## Black mark

It comes out when you turn it quickly It sinks when turned slowly

Mercury

Venus
5. Processing

6. Hope

I hope you will get the results shown in the figure.
Enjoy the experiment.

PlanetX

Earth

Mars

1. Work out the average of the period data ( $T$ ) for each planet
2. Record the period data(T) in Excel
3. Make a scatter plot of the relationship between the $T^{2}$ and the $r^{3}$ (cube of the radius) of revolution.
