87

88

Glossary of Terms

89 **Clinical Center:** Any site or institution participating in a Consortium Study.

90 **Data:** Information related to the Study, including images, testing reports, CRFs, and data
91 collected directly from devices.

92 **Investigator:** A physician or other qualified person who assists a Principal Investigator by
93 performing critical study-related procedures and/or making important study-related decisions.

94 **IRB (Institutional Review Board):** The ethics committee responsible for ensuring the
95 protection of the rights, safety and well-being of human subjects involved in a study. Also
96 known as an independent ethics committee (IEC), ethical review board (ERB), or research ethics
97 board (REB). They may be independent or affiliated with the Clinical Center.

98 **Protocol:** The IRB-approved description of the study.

99 **Study:** The work performed by a Clinical Center's investigators and other personnel in
100 connection with the protocol.

101 **Participant:** As is defined in 21 CFR §312.3(b), means a person who participates in a Study.

102

Chapter 1: Background Information

1.1 Mission Statement

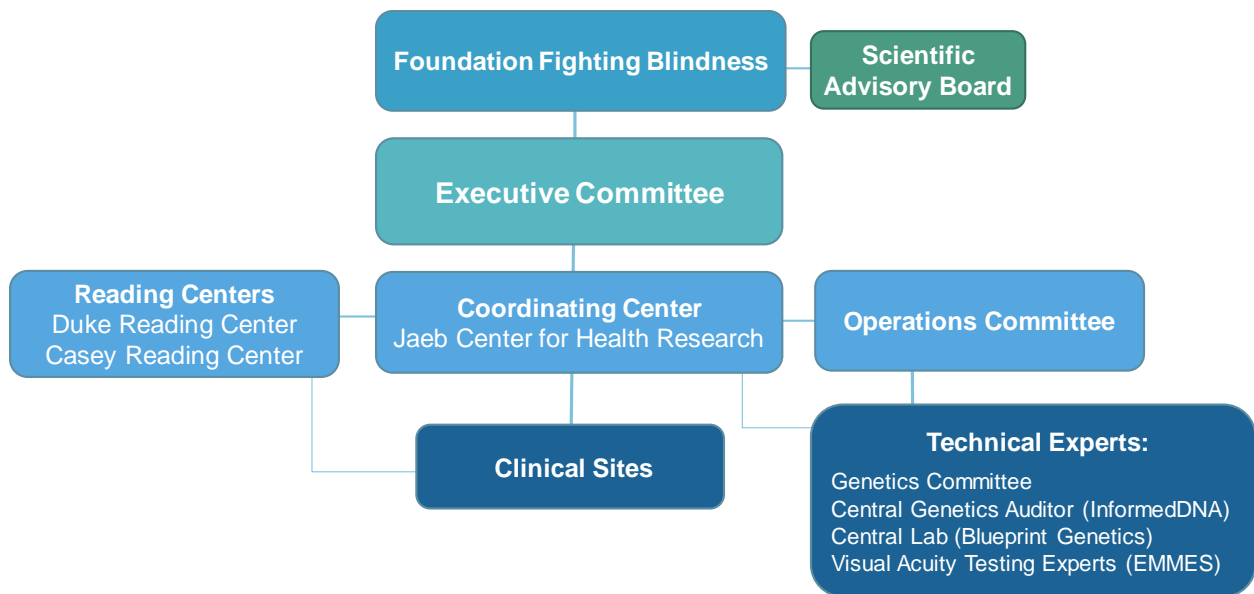

To accelerate the development of treatments for inherited retinal diseases (IRDs) through collaborative and transparent clinical research.

1.2 Amendments to this Policy Document

This is a controlled document for which the Executive Committee is accountable. Changes to the governance of the Consortium may be proposed by any Consortium Member and discussed and voted on by the Executive Committee. Changes to the document, date for the change and rationale for the change will be summarized in the Summary of Changes.

1.3 Organizational Structure

FFB is accountable for the FFB Consortium. The Consortium is comprised of an Executive Committee, an Operations Committee and the investigators of each Clinical Center. The FFB Scientific Advisory Board (SAB) will provide scientific advice to the Executive Committee; the Executive Committee may also reach out to other experts to provide specific advice. The Jaeb Center for Health Research (JCHR) is the Coordinating Center for the FFB Consortium, accountable for all operational activities.

118

119

120

121

1.3.1 Consortium Chair

The Consortium Chair (or 2 co-chairs) assumes overall scientific responsibility and direction for Consortium protocols, assisting the Coordinating Center with managing day-to-day Consortium activities. The Chair also serves as a spokesperson for the Consortium to the public. As a

126 member of the Executive Committee, the Chair attends the Executive Committee meetings and
127 has the same length of term and possibility for re-appointment. The Chair selection process may
128 require input from FFB Science, ROC members, SAB members and the other Executive
129 Committee members, as well as a formal Request for Application (RFA) process.

130 A chair-elect will be included 1 year in advance of the appointment of a new chair whenever
131 possible. In the event of two co-chairs, the co-chairs will be rotated off the committee at
132 staggered time points.

133

134 **1.3.2 Executive Committee**

135 **1.3.2.1 Membership**

136 The Executive Committee will provide leadership to the Consortium. Membership will include,
137 but may not be limited to:

- 138 1. The Consortium Chair (or two co-chairs)
- 139 2. Two or more clinical scientists, with at least one clinical scientist representing a site
140 outside the United States
- 141 3. One or more clinical trialist expert (e.g., epidemiologist or biostatistician)
- 142 4. One or more representatives of the FFB Scientific Advisory Board or Research
143 Oversight Committee, bringing expertise in translational research to the Executive
144 Committee
- 145 5. An FFB liaison and one or more representatives of FFB leadership
- 146 6. The Director of the Coordinating Center at Jaeb Center for Health Research (JCHR)

147 **1.3.2.2 Roles and Responsibilities**

148 The Executive Committee will be responsible for the overall scientific direction for Consortium
149 protocols, which includes, but is not limited to the following responsibilities: a) Identify novel,
150 innovative and high impact endeavors or areas of research for the Consortium, b) Review all new
151 study ideas and ancillary study ideas, c) Inform decisions around Study Chair selection, clinical
152 center selection, and vendor selection, d) Ensure the continuing scientific integrity and rigor of
153 Consortium-conducted studies, e) Identify potential funding sources and help create and maintain
154 relationships with existing funding sources, f) Review and approve manuscripts, presentations,
155 press releases or other publicity, and g) Propose and review policy revisions to this governance
156 document.

157 **1.3.2.3 Appointment and Reappointment of Members**

158 FFB will invite persons to participate in the Executive Committee based on recommendations
159 from FFB Science, ROC members, SAB members and the Consortium Executive Committee. A
160 request for application (RFA) process may be required to appoint new members, at the discretion
161 of FFB. When mutually agreeable, Executive Committee members may be reappointed to serve
162 an additional term. Reappointments will be based on re-evaluation of qualification and review of

163 past activities and the special knowledge the member brings to the Executive Committee and the
164 Foundation.

165 **1.3.2.4 Term**

166 The term for members of the Executive Committee will generally be 3-4 years to allow for
167 rotation while ensuring institutional memory; the FFB liaison and Coordinating Center Director
168 may change as needed. This is done so that there are less than 50% new members in any year.

169 **1.3.2.5 Meetings**

170 Meetings will be convened by teleconference, web, or face-to-face. Meetings during the initial
171 year may be monthly as appropriate and no less than quarterly after that. Face-to-face meetings
172 will be planned to coincide with other major events (e.g. AAO, ARVO or FFB-sponsored
173 meeting) as much as feasible. Agenda items will be solicited in advance of the meeting and
174 circulated to attendees.

175 For each decision or approval, at least 80% of voting members in attendance will constitute a
176 quorum. For decisions or approval requested over email, at least 80% of responses are required
177 before the decision is considered final. The Consortium chair's vote is required for decisions
178 made in meetings or remotely. In the event of a tie, the Consortium chair(s) will cast the final
179 vote. In the event of disagreement on a decision between two co-chairs, an FFB representative
180 will cast the final vote. Executive Committee members are responsible to disclose any conflicts
181 of interest related to decisions made that affect their other roles, such as for committee members
182 who are also investigators. In these cases, members must recuse themselves and not participate in
183 those specific discussions or attempt to influence the decision-making process. Any conflict of
184 interest disclosure must occur at the beginning of an Executive Committee meeting.

185 Investigators from the Consortium, FFB Science, SAB members, and external advisors may be
186 invited to Executive Committee meetings to discuss specific agenda items on an as-needed basis
187 when the Committee desires additional scientific or other input.

188 Decisions and action items from Executive Committee meetings will be documented and
189 archived by the Coordinating Center; members responsible for action items will be notified.

190 **1.3.3 Operations Committee**

191 **1.3.3.1 Membership**

192 The Operations Committee will be comprised of the FFB Liaison, Coordinating Center Director,
193 and the Consortium Chair, and will be attended by additional support from the Coordinating
194 Center as needed. Study Chairs and subject matter experts may also be invited to Operations
195 Committee meetings.

196 **1.3.3.2 Roles and Responsibilities**

197 The Operations Committee will drive the execution of study protocols and be responsible for
198 keeping the Executive Committee informed of any issues. Communications within the
199 Operations Committee will consist of telephone calls, e-mails and in-person meetings.
200 Operations Committee teleconferences may be weekly or bi-weekly.

201 **1.3.4 Clinical Centers and Consortium Investigators**

202 **1.3.4.1 Membership**

203 Clinical Centers and investigators will be invited to participate in the Consortium by FFB, in
204 collaboration with the Executive Committee, based on the knowledge of inherited retinal
205 diseases and ability to participate in and contribute to Consortium studies. Clinical Centers and
206 investigators will be reviewed for Consortium requirements based on standard application forms
207 to assess staffing, facilities, training, patient population, and experience. Additional Clinical
208 Center certification and personnel certification requirements will need to be completed for
209 participation in each study. All investigators must disclose any conflicts of interest that could
210 present a bias in the design, conduct or reporting of a protocol.

211 **1.3.4.2 Roles and Responsibilities**

212 The Consortium investigators will be responsible for adhering to the process and policies in this
213 governance document. Consortium investigators will provide ideas for studies, input to study
214 protocols and analyses and be active contributors to support the Consortium mission.
215 Investigators are encouraged to participate in Consortium-led studies; however, there may be
216 instances that preclude their participation.

217 **1.3.5 Study Chairs**

218 A Study Chair is often selected for a study because he or she initially submitted that protocol
219 idea. Upon submission of a new protocol idea, the Executive Committee will review the
220 submission and decide if it will move forward, prioritizing it among other current and upcoming
221 studies. The Executive Committee will then decide who should be designated as Study Chair.
222 While the submitter would be the likely candidate in most cases, occasionally the Executive
223 Committee will nominate a different investigator because he or she has more experience with
224 that particular study topic.

225 Instances may arise in which a new study idea is initiated from a source other than a single
226 Consortium investigator; for instance, an industry partner or external advocacy group may
227 propose the idea, or the idea may be generated from an interest poll sent to sites. In these
228 instances, the Operations Committee will identify one or more Study Chair candidates. The
229 identification of candidates may be informed by input from members of the Executive
230 Committee, the FFB SAB, or the external research partner. The Operations Committee will
231 nominate one or more candidates based primarily on subject matter expertise in the disease or
232 genetic area relevant to the study idea. However, if there are no obvious candidates, the
233 Operations Committee may solicit interest from other internal or external groups. The potential
234 Study Chair(s) will be proposed to the Executive Committee, which will make the final decision.
235 Any investigator selected as Study Chair would be expected to join the Consortium (for the
236 current study and potentially future studies). Study Chairs must disclose any conflicts of interest
237 that could present a bias in the design, conduct or reporting of a protocol.

238 **1.3.6 Coordinating Center**

239 The Coordinating Center will coordinate activities (calls, meetings, communications) of all
240 Consortium committees and members, coordinate development and maintain version control of
241 all study documents, oversee conduct of all aspects of study protocols (including training,

242 certification, IRB coverage, recruitment, retention, adverse event monitoring, closeout), develop
243 and maintain a multi-functional study website and data management system for supporting
244 Consortium activities (including online system for validated data entry/edit/signoff of data
245 collection forms), develop and implement a quality assurance program that includes monitoring
246 of protocol adherence as well as quality control of data at all stages of each study (both remote
247 and on-site), and manage all aspect of Consortium publications and presentations (including
248 overall production as well as statistical analyses, committee reviews, verifications, and
249 submissions).

250 **1.3.7 Reading Centers and Other Vendors**

251 The FFB Liaison and the Coordinating Center Director will collaborate on selecting vendors to
252 support the Consortium clinical studies. The activities of the reading centers and other vendors
253 will be defined by study protocols and contracts/service agreements.

254 **1.3.8 Data Safety Monitoring Committees**

255 Each interventional clinical study will have a separate Data Safety Monitoring Committee
256 (DSMC) that will be responsible for reviewing the ethical conduct of the study and monitoring
257 the data for evidence of adverse or beneficial treatment effects. The DSMCs are advisory to the
258 Executive Committee. The DSMCs will operate under a single written charter describing
259 standard operating procedures for the Consortium, and details of study specific oversight or
260 interim analyses will be described in each interventional study protocol and/or statistical analysis
261 plan. The DSMCs will typically include an independent expert in each of the following areas:
262 clinical trials, biostatistics, and the disease being studied. A minimum of three persons will be
263 on the DSMC; these persons may not participate in the study in any other way.

264

265

266

Chapter 2: Adherence to Good Clinical Practices (GCP)

267

2.1 Good Clinical Practices (GCP)

268

269

270

271

All Consortium-led studies are to be conducted in accordance with applicable GCP regulations and guidelines per the International Committee on Harmonization (ICH) and US Code of Federal Regulations (CFR), including compliance with electronic records and electronic signatures (21 CFR, Part 11).

272

2.1.1 IRB/Ethics Committee Review and Approval

273

274

275

276

All protocols are to be conducted in accordance with IRB regulations (US 21 CFR Part 56.103) or applicable International Ethics Committee regulations. Investigators at each Clinical Center must obtain approval from a properly constituted/accredited IRB/EC prior to initiating the study and a re-approval on at least an annual basis.

277

2.1.1.1 Central IRB is Required for US Clinical Centers

278

279

280

281

282

Consortium studies starting after January 1, 2020 will require US Clinical Centers to use a central IRB for the review and approval for each study to ensure oversight across all Clinical Centers. For multi-center studies with a coordinating center at the JCHR, JCHR's Institutional Review Board (IRB) is able to enter into an IRB Reliance Agreement to serve as the IRB of record for institutions participating as Clinical Centers.

283

2.1.2 Informed Consent

284

285

286

Written informed consent/assent is to be obtained from each patient prior to any study-related activities or procedures in a study, and/or from the patient's legally authorized representative as per US 21CFR Part 50 and relevant country regulations.

287

2.1.3 Adverse Events

288

289

290

291

292

Adverse events will be assessed, documented, and recorded in the appropriate case report form throughout each study. Specific reporting and monitoring requirements and procedures for each study will be documented in the study protocol and procedures. Intervention studies will have adverse events monitored by a Medical Monitor, either internal or external to JCHR; this will be defined for each protocol.

293

2.1.4 Documentation and Record Retention

294

295

296

297

Source documents may include a patient's medical records, hospital charts, clinic charts, the investigator's patient study files, as well as the results of diagnostic tests such as ERGs, optical imaging, and laboratory tests. The investigator's access to the electronic CRFs on the study website serves as part of the investigator's record of a patient's study-related data.

298

299

300

301

For each study, the following information should be entered into the patient's medical record: patient's name and contact information; date the patient entered the study; study protocol title or number; dates of all visits; occurrence and status of any adverse events; vital signs; laboratory findings; visual acuity worksheets; results of any abnormal findings from any examination;

302 printouts of any digital imaging/testing (e.g., FAF, OCT, fundus photos, etc.) and back-up copies
303 of electronic records; date the patient exited the study, and if early discontinuation, the reason for
304 early exit.

305 All study-related correspondence, patient records, consent forms, patient privacy documentation,
306 records of the distribution and use of all investigational products, and all CRFs (electronically on
307 the website) should be maintained on file and at the Clinical Center.

308 Each center will archive all relevant study data records and keep them on file for a period of time
309 that covers all minimums specified by each governing office/agency for that center and the given
310 study as a whole, whichever is the greatest. Record retention will be defined for each study in
311 adherence to the Coordinating Center's SOPs. This will include a requirement for clinical
312 centers to contact the Coordinating Center prior to planned document destruction.

313 **2.1.5 Policy for Email and Website Use**

314 All investigators and coordinators must have a unique email address that they check regularly.
315 All study personnel must log onto the study website only using their individually created
316 password and must not share their password with others. An electronic signature on an
317 electronic case report form indicates that the data have been reviewed and accepted by the
318 signatory. Electronic signatures will consist of the combination of the individual's study website
319 user identification number and password individually assigned by JCHR. It is unlawful to forge
320 an electronic signature.

321 **2.1.6 Adherence to Protocol and Study Procedures**

322 All study investigators and their staff must adhere to protocols and study procedures to the best
323 of their ability. The investigator must not implement any deviation from or changes to a protocol
324 without approval by the Coordinating Center and prior review and documented
325 approval/favorable opinion from the IRB/EC of a protocol amendment, except where necessary
326 to eliminate immediate hazards to study participants, or when the changes involve only logistical
327 or administrative aspects of the study (e.g., change in monitors, change of telephone numbers; in
328 these cases, Coordinating Center must still be informed of the change).

329 Investigators will recruit participants in Consortium-led studies meeting the protocol-specified
330 criteria and without prejudice of gender and ethnicity.

331 **2.1.7 Protection of Patient Privacy and Confidentiality**

332 The Clinical Centers and investigators will protect patient privacy and take appropriate
333 precautions to maintain confidentiality of medical records and confidential information.
334 However, as part of the quality assurance and legal responsibilities of an investigator, Clinical
335 Centers must permit representatives of the Coordinating Center, authorized representatives,
336 and/or the FDA or other appropriate governmental or regulatory authorities to examine at any
337 reasonable time during normal business hours (a) the facilities where the Study is being
338 conducted; (b) raw Study data including original subject records; (c) medical records in paper
339 and electronic format supporting eligibility criteria and/or safety assessments; and (c) any other
340 relevant information (and to make copies) necessary for the Coordinating Center to confirm that
341 the Study is being conducted in conformance with the protocol and in compliance with
342 applicable FDA or any national or governmental laws and regulations and the ICH guidelines as

343 adopted by the FDA (where relevant). The Clinical Center and investigator must agree to take
344 reasonable actions requested by the Coordinating Center to cure deficiencies noted during an
345 audit or inspection. In addition, the Coordinating Center has the right to review and comment on
346 any correspondence to a governmental authority generated as a result of an inspection or audit
347 relating directly to the Study prior to submission by Institution or Principal Investigator, so long
348 as such review does not unduly delay such response. During an on-site audit or inspection, the
349 Coordinating Center may check to ensure that the informed consent was properly completed,
350 including printed names, dates, and signatures, and therefore would be able to read the
351 participant name. However, identifying information would be redacted prior to transmitting to
352 the Coordinating Center for remote documentation or inspection. Study data are considered
353 confidential until presented at a national meeting or published as an abstract or manuscript.

354 Written authorization and other documentation in accordance with the relevant country and local
355 privacy requirements (where applicable) is to be obtained from each patient prior to enrollment
356 into the study, and/or from the patient's legally authorized representative in accordance with the
357 applicable privacy requirements (e.g., the Health Insurance Portability and Accountability Act
358 Standards for Privacy of Individually Identifiable Health Information (“HIPAA”)). For Clinical
359 Centers in the European Economic Area (EEA), personal data of EEA citizens will be handled
360 pursuant to the General Data Protection Regulation (“GDPR”). The Coordinating Center will
361 honor any reasonable request by a study subject, pursuant to the GDPR, for access to or erasure,
362 transfer, rectification, or accounting of personal data gathered as a part of any FFB Consortium
363 protocol, or for withdrawal of consent to personal data processing. As applicable, the
364 Coordinating Center will undertake all reasonable efforts to procure study participants’ explicit,
365 opt-in consent for data processing pursuant to Article 9 of the GDPR.

366 Only de-identified, pseudonymized patient data will be shared or appear in any publication.

367 The investigators will maintain the highest degree of confidentiality permitted for the clinical
368 and research information obtained from participants in Consortium-led studies. Medical and
369 research records will be maintained in the strictest confidence.

370 **2.1.8 Data Quality Assurance and Monitoring**

371 **2.1.8.1 Clinical Center Staff Training**

372 Clinical Centers and investigators are expected to maintain training records for staff participating
373 in studies. This includes certification of visual acuity technicians, ocular imaging technicians,
374 coordinators, perimetrists, genetic counselors, and others as specified in study protocols.

375 Good Clinical Practices (GCP) training is required every three years by investigators and
376 coordinators. In addition, for each protocol, investigators and study staff will be required to be
377 trained in study specific procedures prior to initiating the study at their Clinical Center.
378 Requirements will be defined for each protocol.

379 **2.1.8.2 Remote Monitoring and Audits of Clinical Centers**

380 Clinical Centers are expected to have their own system to ensure quality of data entered into the
381 eCRFs. The Coordinating Center will use remote data monitoring on a routine basis to identify
382 potential inconsistencies in data as well as on-site data monitoring for assessment of potential
383 issues.

384 Clinical Centers are to notify the Coordinating Center if they have been selected by the FDA or
385 other government inspection agency that they are to be audited for an FFB Consortium-
386 sponsored study.

387

Chapter 3: Conflicts of Interest and Investigator Conduct

3.1 Financial Disclosure and Conflict of Interest

391 All Consortium investigators, coordinators, committee members, and other key personnel will be
392 required to disclose all financial interests and working relationships with any entity whose
393 financial interests potentially could be affected by the conduct or outcome of Consortium-led
394 research. This disclosure will be required separately for each protocol and will require an update
395 according to criteria set for the given protocol. Financial disclosures must be updated within 30
396 days when there is a new financial disclosure due to a change in a Consortium protocol, or a
397 change in the Consortium investigator or staff's finances.

398 Any person serving as a member of the Executive Committee (or other committees as applicable)
399 who has financial disclosures relevant to a company involved in discussions to collaborate with
400 the Consortium will forego discussion and voting privileges regarding decisions on the
401 collaboration. This policy will prevent putting any Consortium investigator in an inappropriate
402 position and will ensure that financial biases are eliminated when voting takes place. FFB is
403 responsible to manage conflicts for Executive Committee members, while conflicts for other
404 consultants and independent contractors (under contract with the Coordinating Center) will be
405 managed by the Coordinating Center.

3.2 Potential Investigator Misconduct and Issue Escalation

3.2.1 Serious Breach of GCP and Protocol Adherence

408 Major protocol deviations (e.g., related to eligibility, informed consent, recording of adverse
409 events, or study treatments) may jeopardize patient privacy, safety and integrity of a study and
410 are not acceptable at any Consortium Clinical Center. This is monitored by the Coordinating
411 Center and becomes a concern when a clinic is making more mistakes than expected, particularly
412 major ones (e.g. entering ineligible participants).

3.2.2 Assessment and Reporting

414 Assessment of any potential investigator or staff serious misconduct will be done via an on-site
415 monitoring visit. Potential issues will be discussed by the Operations Committee first and then
416 escalated to the Executive Committee if there is evidence of serious misconduct. If GCP
417 violations are serious, they will be reported to the governing IRB/EC and may also be reported to
418 the FDA or other regulatory agency. The Executive Committee, and potentially the DSMC will
419 make a decision regarding suspension or halting of study activity at that Clinical Center.

3.2.3 Corrective and Preventative Actions

421 A written corrective action and preventative action plan for any case of serious misconduct will
422 be put into place by the Coordinating Center in collaboration with the Operations Committee.

3.2.4 Issue Escalation

424 Each FFB Consortium protocol will have an Escalation Plan in place to address potential
425 problems as they arise. Escalation Plans are intended to specify the measures implemented (for

426 instance, the levels of Operations Committee or Executive Committee involvement) when there
427 are problems to address with a Clinical Center that may negatively impact the study but are not
428 serious enough to be considered breaches of GCP.

429

430

Chapter 4: Editorial Policy

4.1 Editorial Policy

432 The following policies relate to publications and publicity produced by the Consortium. These
433 activities will be managed by the Coordinating Center and overseen by the Executive
434 Committee. Investigators wishing to publish or present Consortium data without scientific
435 collaboration with the Consortium should follow the policies outlined in section 5.1.3.

436

4.1.1 Manuscripts and Presentations

437 All manuscript and presentation ideas related to any aspect of a Consortium-led study, including
438 but not limited to the study protocol, study results, and study conduct that is not already
439 information in the public domain, must receive the approval of the Executive Committee. The
440 topic for a manuscript or presentation may be initiated by the Executive Committee, or by any
441 investigator, who may submit a manuscript idea to the Coordinating Center for Executive
442 Committee consideration.

443 Typically, the “primary” manuscript for a study will refer to the manuscript that contains the
444 analysis of the primary outcome of the study, and all other manuscripts will be considered
445 “secondary” manuscripts. There may be studies with multiple objectives that will result in
446 multiple publications to address them, in which case there might be more than one primary
447 manuscript (or no primary versus secondary designations). The Executive Committee will make
448 the determination of whether a manuscript is primary or secondary.

449 The Executive Committee will approve all manuscripts about the study or any ancillary study in
450 a timely fashion (e.g., 1-2 weeks) prior to submission for publication. The manuscripts will also
451 be submitted to FFB for comment prior to submission. Primary manuscripts must also be
452 approved by the DSMC (if there is a DSMC). The DSMC will be sent secondary manuscripts
453 for comment, but approval will not be required.

454 All investigators at Clinical Centers participating in the relevant study will receive a draft of the
455 manuscript for review. Prior to submission, each PI will also have an opportunity to approve the
456 final version of the manuscript.

457

4.1.2 Authorship

458 Since every investigator cannot have an active role in writing a paper, the Operations Committee
459 will establish a Writing Committee for each paper with the advice of the Executive Committee.
460 Investigators may volunteer for these writing assignments. Writing Committees may also
461 include representatives from Reading Centers, consultants who were involved in the
462 implementation or monitoring of the protocol, or vendors with ownership or intellectual property
463 related to the procedures performed. The Operations Committee will also determine the first
464 author for each paper; typically, this will be the Study Chair for primary manuscripts.

465 For all manuscripts and presentations, the writing committee members will be listed by name
466 followed by “for the FFB Consortium Investigator Group.” Each Clinical Center with an
467 investigator who enrolled at least one patient along with the study personnel at that site will be
468 listed in at least one manuscript for each study (it may be referenced in other manuscripts for the
469 same study) in descending order of recruitment, if this meets with journal approval. Each PI will
470 be given the opportunity to review and sign off on the site listing as it will appear in the
471 appendix, where applicable. Sources of support for the study will be listed. Members of the
472 Writing Committee, Executive Committee, DSMC, reading centers, relevant independent
473 consultants/experts and Clinical Centers will be listed.

474 To qualify for authorship, each author must meet at least one criterion in each of the three
475 categories. Each author must also provide approval of the final version of the manuscript.

476 Category 1

- 477 • Conception and design
- 478 • Acquisition of data
- 479 • Analysis and interpretation of data

480 Category 2

- 481 • Drafting of the manuscript
- 482 • Critical revision of the manuscript for important intellectual content (this does not include
483 reviewing the manuscript for journal submission approval)

484 Category 3

- 485 • Statistical analysis
- 486 • Obtaining funding
- 487 • Administrative, technical, or material support
- 488 • Supervision
- 489 • Other (specify)

490 **4.1.3 Publicity**

491 The Executive Committee and FFB must give approval prior to any press release or other
492 publicity about the study using information not already in the public domain.

493

494

Chapter 5: Collaboration and Transparency

5.1 Collaboration and Transparency

496

5.1.1 Multi-centered studies

497 The Consortium-led studies will be conducted as multi-centered studies to increase the
498 robustness of study results and enable individuals from different regions to participate.

499

5.1.2 Availability of Study Protocols and Procedures

500 To further the mission of the Consortium, sharing of study protocols and procedures will be
501 allowed; requests will go through the Executive Committee.

502

5.1.3 Data Sharing Policy

503 Sharing study data is an integral component of the Consortium’s mission. Unless otherwise
504 approved by the Executive Committee, the policies below will be relevant for all data sharing
505 circumstances. These policies address the processes by which valid and accurate study-specific
506 data and general information can be accessed in a timely manner. Statements regarding the data
507 sharing plans for each study will be posted on ClinicalTrials.gov during study registration and
508 will be included with relevant manuscript submissions in accordance with journal standards.

509

5.1.3.1 Public Datasets

510 Individual, de-identified, study participant data will be made available as a “public dataset” after
511 the study is completed and all manuscripts addressing the protocol-defined objectives have been
512 published. These two activities will typically occur within one year of the last study participant’s
513 last visit. A study will be considered “completed” when all the following activities (as
514 applicable) have been completed:

515

- Scheduled study visits;

516

- Exams and assessments;

517

- Image grading and interpretation;

518

- Genetic testing interpretation and adjudication;

519

- Quality assurance reviews;

520

- Data reconciliation;

521

- Medical coding;

522

- Documentation of known data anomalies and data handling rules; and

523

- Database lock.

524

5.1.3.2 Requests to Use Study Data from a Public Dataset

525 The following policy applies to situations when a study dataset has been made publicly available.

526

527 Persons wishing to use a public dataset must submit a request form to the Coordinating Center
(ffb@jaeb.org).

528 Data sharing will be contingent upon executed confidentiality, data transfer and processing
529 agreements, GDPR compliance, and compliance with the Coordinating Center’s Data Transfer
530 Agreements with Clinical Centers outside the United States. The content of these agreements
531 may add more details and requirements than are included in this policy document.

532 Additionally, the author should be explicit when presenting their analyses in any forum that they
533 do not speak for, nor represent, the opinions of the Consortium. Use of these Consortium data
534 requires that the following disclaimer be added to any paper, review, presentation or other
535 distribution of the data exactly as follows:

536 “The source of the data is the Foundation Fighting Blindness Consortium, but the analyses,
537 content and conclusions presented herein are solely the responsibility of the authors and may not
538 reflect the views of the Foundation Fighting Blindness.”

539 **5.1.3.3 Requests to Use or Access Study Data Before it is Publicly Available**

540 The following policies apply to situations when a study dataset has not yet been made publicly
541 available.

542 **5.1.3.3.1 Academic Researchers Seeking Data Access (Aggregate or Individual** 543 **Observations) – with Scientific Collaboration**

544 Academic researchers wishing to scientifically collaborate with the Consortium on an idea using
545 Consortium study data (either aggregate or individual data) not yet released must submit the idea
546 to the Coordinating Center for Executive Committee consideration according to the Consortium
547 editorial policy (Section 4.1).

548 **5.1.3.3.2 Requests for Aggregate Data – without Scientific Collaboration**

549 Persons requesting tabulated or summary data without scientific collaboration with the
550 Consortium on an idea using Consortium study data not yet released (via public dataset) or
551 already published must submit the request to the Coordinating Center for Executive Committee
552 approval. The Executive Committee will determine whether analysis and presentation or
553 publication of the data would negatively impact the Consortium study objectives or any planned
554 or pending reporting on the study dataset.

555 Note: If the origin of the request is a company, the request will also be routed to FFB leadership
556 to determine if it may be related to existing or possible future industry collaboration.

557 If approved, the following stipulations will apply:

- 558 • Use of Consortium data or images requires that the following disclaimer be added to any
559 paper, review, presentation or other distribution of the data exactly as follows: “The
560 source of the data is the Foundation Fighting Blindness Consortium, but the analyses,
561 content and conclusions presented herein are solely the responsibility of the authors and
562 may not reflect the views of the Foundation Fighting Blindness.”
- 563 • If Executive Committee approval depends on any specific conditions, this will be
564 communicated and will be required to be followed.

- 565
- 566
- 567
- If the aggregate data are to be disseminated in a publication or presentation, the draft manuscript, abstract, poster, or presentation must be submitted for Coordinating Center review for adherence to stipulations, with at least two weeks’ time allotted for response.
- 568
- The final version of any manuscript, abstract, poster, or presentation must also be provided to the Coordinating Center.
- 569

570

571

572 **5.1.3.3.3 Academic Researchers Seeking to Use Their Own Study Data– without**

573 **Scientific Collaboration**

574 Academic researchers wishing to pursue publication or presentation of Consortium data to which

575 they already have access but is not yet publicly available (e.g., [1] Consortium data obtained

576 from an investigator’s own patients or [2] a reading center’s graded data), without scientific

577 collaboration with the Consortium must submit a data use request form to the Coordinating

578 Center for Executive Committee consideration. The Executive Committee will determine

579 whether analysis and presentation or publication of the data would negatively impact the

580 Consortium study objectives or any planned or pending reporting on the study dataset.

581 Note: The only exception to this is the unlikely scenario that study data are not made public (via

582 a public dataset) within 12 months following formal closeout of the study. In this case, the

583 investigator would have the right to report or present Consortium data obtained from his or her

584 own patients without prior Executive Committee approval.

585 If approved, the following stipulations will apply:

- 586
- Use of Consortium data or images requires that the following disclaimer be added to any paper, review, presentation or other distribution of the data exactly as follows: “The source of the data is the Foundation Fighting Blindness Consortium, but the analyses, content and conclusions presented herein are solely the responsibility of the authors and may not reflect the views of the Foundation Fighting Blindness.”
- 587
- If Executive Committee approval depends on any specific conditions, this will be communicated and will be required to be followed.
- 588
- The draft manuscript, abstract, poster, or presentation must be submitted for Coordinating Center review for adherence to stipulations, with at least two weeks’ time allotted for response.
- 589
- The final version of the manuscript, abstract, poster, or presentation must also be provided to the Coordinating Center.
- 590
- 591
- 592
- 593
- 594
- 595
- 596
- 597

598 **5.1.3.3.4 Any Request for Data Access to Individual Observations – without**

599 **Scientific Collaboration**

600 The Consortium may consider providing academic researchers or companies early access to de-

601 identified, pseudonymized participant-level study data in accordance with the following policies.

- 602 1. The request must be made in writing (to ffb@jaeb.org) and must specify the planned use of
- 603 the data and specific datapoints requested

- 604 2. The Executive Committee must approve the written requests
- 605 3. The intended use must be consistent with the mission of the Consortium, as determined by
606 the Executive Committee
- 607 4. The Executive Committee will determine whether any plans for presentation or publication
608 of the requested data would negatively impact the Consortium study objectives or any
609 planned or pending reporting on the study dataset
- 610 5. Any approved data sharing will be contingent upon executed confidentiality, data transfer
611 and processing agreements, GDPR compliance, and compliance with the Coordinating
612 Center’s Data Transfer Agreements with Clinical Centers outside the United States. The
613 content of these agreements may add more details and requirements than are included in this
614 policy document.
- 615 6. Executive Committee approval may be conditional on additional stipulations beyond what is
616 in this policy document
- 617 7. If approved by the Executive Committee, plans to publicly present or publish data **for the**
618 **purpose of regulatory submissions and potential associated investor/public relations**
619 must adhere to the following, as bound in the contract, which requires the researcher certify
620 that:
- 621 (a) No conclusion of the Data shall be used, shared, publicly presented or published
622 that conflicts with the conclusions drawn by the FFB Consortium.
- 623 (b) Any conclusions of the Data must include the following disclaimer: “The source
624 of the data is the Foundation Fighting Blindness Consortium, but the analyses,
625 content and conclusions presented herein are solely the responsibility of the
626 authors and may not reflect the views of the Foundation Fighting Blindness.”
- 627 (c) Researcher will only submit conclusions that have been drawn in good faith.
- 628 (d) High level conclusions should be provided to the Coordinating Center for review
629 to support alignment of such conclusions with enough time to provide a review
630 and feedback for consideration.
- 631 8. If approved by the Executive Committee, plans to publicly present or publish data **in a**
632 **scientific journal or conference** must adhere to the following:
- 633 (a) Any draft manuscript, abstract, poster, or presentation must be provided to the
634 Coordinating Center in writing at least thirty (30) calendar days prior to
635 submission for publication.
- 636 (b) The final version of any manuscript, abstract, poster, or presentation must also be
637 provided to the Coordinating Center.
- 638 (c) All conclusions of the data must include the following disclaimer: “The source of
639 the data is the Foundation Fighting Blindness Consortium, but the analyses,
640 content and conclusions presented herein are solely the responsibility of the
641 authors and may not reflect the views of the Foundation Fighting Blindness.”
642

643 **5.1.3.4 Requests to Use Information that does not Require Study Data**

644 **5.1.3.4.1 General Consortium Information**

645 Persons wishing to publish or present general information about the Consortium with no study
646 data included may do so without formal approval. Examples of general information include the
647 number and identity of participating centers, information (e.g., study design and milestones)
648 about planned and current studies, and summaries of publications and presentations. Since
649 information about the Consortium changes frequently, presenters are encouraged to use
650 frequently updated slides from the Coordinating Center and send a courtesy notification to the
651 Coordinating Center (ffb@jaeb.org) about the intended publication or presentation.

652 **5.1.3.4.2 Independent Ancillary Study Data**

653 Persons wishing to publish or present data from Consortium participants who are in an
654 independent (not coordinated by the Consortium) ancillary study, where no study data will be
655 used, may do so without formal approval. Since information about the Consortium changes
656 frequently, a courtesy notification to the Coordinating Center (ffb@jaeb.org) about the intended
657 publication or presentation is requested. The following disclaimer must be included.

658 “These data were collected as an independent ancillary study to a Foundation Fighting Blindness
659 Consortium protocol. Data collection, analyses, content and conclusions presented herein are
660 solely the responsibility of the authors and may not reflect the view of Foundation Fighting
661 Blindness.”

662

663

Chapter 6: New and Competing Studies

6.1 New Studies

665

6.1.1 New Protocols

666 Protocol ideas may be submitted by individuals inside or outside the Consortium. A Consortium
667 Protocol Idea Form can be used to propose a new study idea. Ideas will be first reviewed with
668 the Executive Committee for merit, feasibility, and prioritization. All protocol ideas that are
669 favorably reviewed by the Executive Committee will also be reviewed by Consortium Members
670 for additional input and interest, and by the FFB's Clinical Subcommittee to the Research
671 Oversight Committee for ultimate approval to proceed to full protocol development process.

672

6.1.2 Ancillary Studies

673 An ancillary study is one in which research procedures not part of the primary protocol is
674 performed on a subject participating in a current Consortium protocol.

675 There are two main types of ancillary studies, Consortium ancillary studies and independent
676 ancillary studies.

677

6.1.3 Consortium Ancillary Studies

678 A Consortium ancillary study is one that is coordinated by the Coordinating Center with
679 oversight by the Executive Committee. This type of ancillary study would follow all the same
680 governance policies and oversight as a Consortium protocol, including the following:

- 681 1. The ancillary study idea must be submitted for review by the Executive Committee according
682 to the same review process as described above for new protocols, section 6.1.1. An Ancillary
683 Study Idea Form should be submitted for this review.
- 684 2. Use of Consortium ancillary study data would follow the data use policy noted in section
685 5.1.3, Data Sharing Policy.
- 686 3. The editorial policy for a Consortium ancillary study is the same as for any other Consortium
687 manuscript as noted in section 4.1, Editorial Policy.

688

6.1.4 Independent Ancillary Studies

689 An independent ancillary study is one in which study resources and the Coordinating Center are
690 not involved. The operations and funding would be the responsibility of the investigator(s).
691 Although the independent ancillary study would not be coordinated or overseen by the
692 Consortium, it must adhere to the following requirements:

- 693 1. The independent ancillary study idea must be reviewed and approved by the Executive
694 Committee. The primary purpose of this review would be to determine that the ancillary
695 study objectives do not interfere with the objectives of the primary protocol. The
696 Coordinating Center should be contacted to propose an independent ancillary study idea.
- 697 2. Use of the independent ancillary study data that is not collected as part of any Consortium
698 protocol can be used/published according to the policy in section 5.1.3.

699 3. Use of any Consortium study data that was collected in conjunction with the ancillary study
700 data (i.e., even just for an investigator’s own patients) would follow the data sharing policy
701 noted in section 5.1.3.

702 **6.2 Competing Studies**

703 A ‘competing’ study is defined as one in which subject eligibility criteria overlap with that of a
704 Consortium study. Clinical Centers are required to inform the Coordinating Center of studies in
705 which they are participating that have eligibility criteria that overlap with a Consortium protocol
706 in which they are concurrently participating. Clinical Centers should determine a management
707 plan for competing studies internally. Assistance from the Operations Committee will be
708 available for Clinical Centers that would like advice on how to manage their competing studies.
709 Clinical Centers should ensure that any funding received, such as travel reimbursement for study
710 visits, is managed and monitored appropriately in cases where participants are enrolled in more
711 than one concurrent study.

Chapter 7: Funding

7.1 Funding of Consortium Studies and Clinical Centers

7.1.1 Funded through Private Donations

The Consortium is funded through private donations made to the Foundation Fighting Blindness for the purpose of finding treatments for inherited retinal diseases. Care must be taken to conserve resources to ensure highly efficient usage of the funding.

7.1.2 Contracts

Each Consortium-led study will have its own budget and contract between FFB and the Coordinating Center and between the Coordinating Center and Clinical Centers and vendors. The Coordinating Center will enter into a Master Agreement with each Clinical Center for their participation in the Consortium; each protocol will have an individual numbered Addendum. Additional funding to cover institutional indirect cost rates or overhead fees will not be available.

Funding of the Consortium is expected to produce data leading to development of treatments for IRDs. Contracts with the Clinical Centers will be based on a fee-for-service based on the number of participants enrolled into the study and the number of examinations completed. Clinical Centers will also receive funding not tied to specific study visits, intended to offset the certification and administrative tasks associated with each protocol; these payments will be distributed to Clinical Centers once certification requirements are completed.

Depending on the study, all study visits, including but not limited to screening, baseline and follow-up, and any standard of care appointments, may be charged to the study participant or their insurance carrier or health care system as permitted according to each country's laws and regulations. Depending on the study, the study participant may also be responsible for any deductible or co-payments as defined by their insurance carrier. Consortium rates for each procedure and visit are developed based on the "research rate" and are intended to cover the full cost without requiring any reimbursement from the patient or his/her insurance. Certain study procedures, including obtaining informed consent and non-standard examination, will not be incurred by the study participant and will be covered by the study. Participation of the study coordinator will be paid on a by-patient/by-visit basis, as will the investigator to ensure adequate compensation for completed work.

Traveling to Clinical Centers can be challenging for patients with IRDs; to assist with transportation, study participants will be offered a stipend on a by-visit basis for transportation and their participation. The amount and the mechanism for payment will be described in the informed consent form.

7.2 My Retina Tracker

My Retina Tracker Registry (MRTR) is a patient-driven registry for patients with IRDs sponsored by FFB. Consortium Clinical Members are expected to actively encourage their clinic patients to register and participate in MRTR and inform patients that they can request their physician/genetic counselor to put data into MRTR on the patient's behalf.

Summary of Changes

Version	Author(s)	Approver	Effective Date	Revision Description
1.0	J. Cheetham, A. Ayala	P. Zilliox	May 13, 2016	First Version of Document
2.0	J. Cheetham, A. Ayala	P. Zilliox	March 30, 2017	<ul style="list-style-type: none"> • Clarification: Financial disclosure requirements tied to each protocol • Clarification: FFB CRI Consortium will not pay indirect fees • Clarification: billing to insurance “may” be required instead of “will” be required for SOC tests, depending on the study • New policy: new protocol ideas and ancillary studies
3.0	A. Ayala, J. Cheetham	S. Rose	November 26, 2018	<ul style="list-style-type: none"> • Modified data sharing policy for use of Consortium data to the public to require a disclaimer • Modified ancillary studies policy to define Consortium sponsored ancillary vs independent ancillary study • Removed CRI references • Added section on GDPR • Updated site/staff training requirements
4.0	A. Ayala, R. Sitten	T. Durham	July 8, 2019	<ul style="list-style-type: none"> • Updated the figure in the Organizational Structure section • Added a subsection for Executive Committee reappointments • Expanded Study Chair selection policy to included instances where a new protocol idea is submitted by someone who is not an investigator in the Consortium • Added more explicit language with regards to access to records at site visits • Added collaborators to list of possible Writing Committee members

5.0	A. Ayala, R. Parsons	T. Durham	January 24, 2020	<ul style="list-style-type: none"> • Revised the data release and data use sections • General updates and minor corrections throughout • Added Central IRB as a requirement • Added section about Escalation Plans
6.0	A. Ayala, R. Parsons	Executive Committee	January 15, 2021	<ul style="list-style-type: none"> • Added a new section on Consortium Chair responsibilities and selection process • EC Membership- Added a new role for representative(s) of the FFB SAB or ROC; better defined the membership structure and responsibilities of the EC • Added the percent of votes required for EC decision-making • Added additional detail around conflicts of interest for committee members and investigators • Added additional detail throughout the Committee descriptions and Study Chair sections • Updated the Data Sharing Policy to align with JCHR SOPs around international data sharing
