## Gmail account change password android

Need to change your Gmail password? Or have you forgotten your login information? We have you covered, with everything you need to know about changing or resetting your Gmail password, if you access your emails on a desktop, Android device, or iOS device. Google's Gmail is one of the best email providers on the planet, with more than a billion users regularly checking their accounts. You can use Gmail as a personal account, or as part of a G Suite account, which includes entertainment venues, Google Tasks, Google Keep and Google Calendar - if you use your Gmail for business as part of the team, you probably have the latter option. However you use Gmail, losing access after forgetting your login information – or being hacked as a result of a weak password – can have significant implications for you personally and as a business. A secure password is the first step in protecting your account and your data, and it's important that you update it regularly, ensuring it's hard to guess and not already in use for any of your other apps or accounts. Here are the best ways to change your Gmail password on desktop, Android and iOS devices. How to change your Gmail password on your PCFirst, open your Google account in your web browser – so you can get an overview of your account. Then, choose Security from the menu on the left side of the screen. Under Sign in to Google, select a password and enter your new password (you might need to sign in again at this point). Finally, select Change password. (Image credit: TechRadar) It's also a good idea to add a recovery phone or email address if you lose access to your account in the future and so Google can contact you if it notices any unusual activity associated with your account. To do this, go back to Security and scroll down to Ways We Can Make Sure It's You. Select a recovery phone or recovery email and follow the instructions. After you change your password, you'll sign out of anywhere except the following: Devices you use to make sure it's you when you sign in Some devices with third-party apps you've given your account access to home devices you've given access to your accountChange your Gmail password on Android If you have an Android device, you can change your login credentials using device settings. First, open the Settings app, and then choose Google &t; Manage your Google account. At the top of your account overview you can scroll through the different sections. Go to Security, then scroll down to Sign in to Google. Select a password (you may need to sign in again here) and follow the steps to change your password. (Image credit: TechRadar) Change your Gmail password on iOS If you're using Gmail with an iPhone or iPad, you'll need to open the Gmail app to change your password. In the upper-left right of the app, tap your profile picture (or first of your name if you haven't set up a profile picture and select Manage your Google Account. At the top of the screen, tap Personal Info, and then, under Profile, tap Password. Enter a new password and select Change Password.How to reset your Gmail password Forgot your Gmail password? Go to the Google Account Recovery page, where you'll be asked to enter your email address and the last password you remember using with your account. If a password doesn't remember, select Try a different way, and Google will send a message to your phone -- all if you've added a recovery number to your account, all if you've added a recovery number to your account, all if you've added a recovery number to your account. If you haven't set up a recovery number, select Retry Another Way and Google will send a message to your recovery email address. Still can't get in? Click Try Another Way again, and you'll be asked to answer a security question you chose when you open your Gmail account. If everything else fails, and you can't remember the answer to your security question, click Try Another Way again. You'll then be asked to check your email account after 12 hours – during which Time Google will try to make sure your account belongs to you. If Google can do this, you'll get a link to reset your password. If no of your e-mail messages can find the e-mail, check the person's or bulk mail folders and add noreply@google.com your address book. Choosing a strong password will never use the same password for different applications—after all, if one account is hacked, you don't want a hacker to have access to all your other accounts because the sign-in information is exactly the same. If you're worried about remembering a lot of different credentials, the best password managers will do it for you – and many come with password generators, which will come with a strong password for you. If you're using Gmail for work, it's a good idea to check out the best business password managers as well. If you decide to choose your own password, be sure to use a mixture of numbers, uppercase letters, and small stands to make guesswork difficult. Icons like '!' or '%' are also worth including, as they make your password even harder to guess. Turning on two-step Google authentication offers two-step verification for Gmail, which adds an extra layer of security to your account. Your email address and password integration are the first step in gaining access to your account - allowing two-step verification means adding a second step, making it difficult for burglars to access your account. This means that every time you connect to Gmail, a code will be sent to your phone via text, voice call or Google Authenticator app. Or, if you have a security key, you can insert it into your computer's USB port. (Image Credit: TechRadar) To turn on this feature, follow the same steps as you want to change your password - but instead of choosing a password Sign in to Google, select 2-step verification. Select the code receipt method and select Try it now. A request will be sent to your device, after which you'll need to enter a response option if you lose your phone or the second step you want won't be available. Answer the prompt, and then you can turn on two-step verification.Two-step verification versus two-step verification: What's the difference? Welcome! People Practitioners, LLC. Collects data to deliver the best content, services, and digital ads. We partner with third-party advertisers who may use tracking technologies to collect information about your activity on sites and apps across devices, both on our sites and online. You can find more information about your privacy options in our Privacy Policy. You can make a data subject request at any time. Even if you choose not to track your activity by third parties for advertising services, you'll still see non-personalized ads on our site. By clicking Continue below and using our sites or applications, you agree that we and our third-party advertisers can: transfer your personal data to the United States or other countries, and process your personal data to serve you with personalized ads, subject to your choices as described above and in our Privacy Policy. This link is to an external site that may or may not comply with accessibility guidelines. Best answer: Like most online services, you'll need to be 13 or older to qualify for creating a Gmail account. However, you can set up and manage an account for your child using Family Link, which allows them to access Google services such as Gmail and YouTube. Anyone aged 13 or over can set up and manage their own Google accounts. The minimum age limit is in place due to the Children's Online Privacy Protection Act (COPPA). This law restricts online services from collecting personal information of users under the age of 13 without their parental consent. Because it is not possible for services to obtain parental permission for any minor user who gives, online services restrict users to 13 or under from setting up an account. For example, if you set up an account for your child under a different age, and if Google is aware of that fact, it will lock out that account. In 13 years, it's the standard minimum age for most countries. There are several regions around the world where it is usually higher: Austria: 14+ Bulgaria: 16+ Croatia: 16+ Cyprus: 14+ Czechia: 15+ France: 15+ Germany: 16+ Greece: 16+ Hungary 1 6+ Ireland: 16+ Italy: 14+ Lithuania: 14+ Luxembourg: 16+ Netherlands: 16+ Poland: 16+ Portugal: 16+ Romania: 16+ San Marino: 16+ Slovakia 16+ Slovenia : 16+ Spain: 14+ South Korea: 14+ Vietnam: 15+ Aruba: 16+ Netherlands Caribbean: 16+ Korsao: 16+ Marten score: 16+ Peru: 14+ Venezuela: 14+ Linking is the only way to go and create a Google account for someone under 13 is via a family link. The feature allows parents to set up and manage a Google account for their children, with the ability to set up activity controls and content restrictions. For Gmail accounts used by children under the age of 13, there are some differences. Google doesn't serve ads within Gmail or read mail content for targeted advertising. You will also automatically forward and Gmail offline is not available to underage users. Any mail that Google identifies as junk will not be delivered to your inbox or even to the Junk E-mail folder. If you want to set up your child with Gmail, the best option right now is via family link. The strong control value offered makes it much easier to configure an account for your children and set up safeguards in the form of safe search, downloads and purchases, and screen time limits. Still the best email client for Android with more than 1.5 billion active users, Gmail is the most popular email client

around. And with most inbox features now making their way into Gmail, it's the only email client you need. This Bluetooth mouse doesn't compromise on comfort or battery life in search of a compact, portable package. Although you can more than use with the trackpad or touchscreen, Mouse is still a very helpful Chromebook tool. Chromebooks can seem easy on internal storage, but with this spacious microSD card, you can add storage for tons of photos, movies, music, or any documents you may need to use offline. Whether you're shaking a tiny C101 or a big bad Lenovo C630, CAISON has a waterproof, great-looking laptop sleeve for your Chromebook. We may earn commission for purchases through our links.
