RefrigiWear®

Quality Statement

Since 1954, RefrigiWear® has been committed to Quality, Performance and Reliability. Our founder, Myron Breakstone, demanded a standard of excellence that will never be compromised.

We understand that the customer defines quality. To consistently exceed customer expectations, we challenge our dedicated employees and loyal suppliers to continuous improvement of every product, process and service. We promise to aggressively protect the reputation of RefrigiWear® as the industry leader in quality.

Comfort Ratings

RefrigiWear® Comfort Ratings are guidelines that help communicate the level of warmth a person can expect from our products under normal activity levels. To assign a temperature rating, RefrigiWear® takes into account key elements of the garment's construction: Insulation, outershell and lining. Taken together, these elements help create the "Insulating Power" a garment has to keep you warm.

You must remember that Comfort Ratings are only guidelines.

It's important to note that activity levels will have a considerable impact on warmth. The more active you are, the more body heat you generate. Also, each person's unique circulation, metabolism and physical characteristics will factor into their overall warmth.

SOFTSHELL

Tough. Comfortable. Warm.

Softshell jackets offer a streamlined fit and smooth exterior that is very soft to the touch. As a material, softshells have more stretch and are less bulky, meaning you get a higher level of flexibility. They are water-repellent, exceptionally durable and very breathable, all key features for a hard-working garment. The RefrigiWear® softshell collection consists of jackets, vests, overalls and pants with color options, modern designs and plenty of functional features.

ICONIC

WARM | TOUGH

PROVEN IN THE COLD FOR OVER 60 YEARS

Since 1954, thousands of people have trusted Iron-Tuff® garments to protect them from extreme cold environments. As our iconic line of garments, they provide protection down to -50°F as well as durability and reliability that you can count on for years to come. Iron-Tuff® products are the classic solution to keep you warm, safe and productive.

Durable | Water-Repellent | Wind-Tight

Elastic back band on jackets provides additional draft protection and comfortable fit.

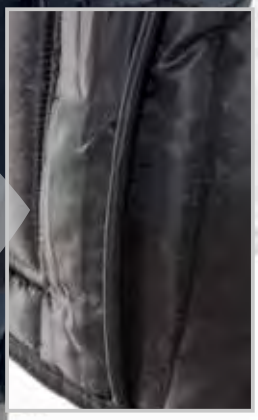

Heavy-duty zippers ensure ease-of-use and durability for long-lasting wear and comfort.

Ample, well-placed pockets make garments as functional as they are warm.

Stay warm and comfortable with RefrigiFill™, our proprietary blend of insulation that has been perfected over our 60 years of insulating garments.

Bound seams seal out cold air and drafts as well as enhance product longevity.

Reinforced brass rivets at high-stress points increase durability and ensure years of quality performance.

Heel reinforcement patches protect overalls and coveralls from rips and tears resulting from friction with boots.

Water-repellent, wind-tight finish provides an added layer of protection from the cold.

Core Warmth Why It's Essential

Keeping your core warm is essential to overall body warmth – the warmer your core is, the more blood gets to your extremities. Vests are a versatile layer addition for a range of temperatures and activities to keep your core warm while retaining a full range of motion for your arms.

GREAT VALUE & QUALITY

RefrigiWear features a broad selection of cold weather gear at great prices. Plus, we always put a little extra effort into making garments durable so you can enjoy our Puffer, Econo-Tuff and Cooler Wear garments as well as Base Layers, Sweatshirts, and Fleece for many seasons.

LAYERING FOR WORK, PLAY AND IN-BETWEEN

BASE LAYER
Moisture Control

✓ Material should wick moisture.

⊘ Avoid materials like cotton that absorb and retain moisture.

MID LAYER
Insulation

Lightweight, traps heat against body—Fleece, down, high tech polyester or similar materials are common.

OUTER LAYER
Weather Protection

Protects you against weather conditions and temperatures—

Depending on conditions, materials should be waterproof, wind-tight and/or provide extra insulation.

Puffers & Quilted

Puffer jackets and vests apply our knowledge of tough environments to the popular puffer jacket style. They are extremely light and easy to handle, yet still warm and flexible, plus more durable than other puffers on the market. Our new Diamond Quilted Jacket combines extra durability with fashionable style for a garment that can be easily taken from work to play.

Durable | Water-Repellent | Wind-Tight | Lightweight

Features

Industrial Strength

Every product RefrigiWear® manufactures is crafted for industrial use, giving you a durable garment that's going to stand up to tough work environments with heavy-duty rip-stop outershells. Our cost-efficient Econo-Tuff® and Cooler Wear™ product lines keep you warm and protected in tough environments and are a great value.

Econo-Tuff®

Lightweight, warm, durable and a great value — Econo-Tuff® garments provide the best of all worlds. The 6oz. polyester fiberfill helps protect you down to 15°F, while features like knit cuffs help seal out the cold. The outershell is made from tough denier polyester for increased resilience to rips or tears.

Features

Clothing Weight

The weight of a jacket doesn't always determine warmth. A lighter-weight material and more loft in insulation can still be warmer than a jacket with a heavier outershell and a thin layer of dense insulation.

0934 Econo-Tuff® Frock Liner

6 oz. Polyester fiberfill insulation

Layering for Warmth, Versatility

RefrigiWear's line of mid and base layers provides additional levels of protection from the cold and moisture. Layering garments are versatile since you can wear them under jackets and sweatshirts, as a mid-layer or over other clothing. Layering can keep you warmer and dryer. In addition, they are made from stretch fabric that enhances comfort and maneuverability.

Women's

RefrigiWear® offers industrial-strength insulated clothing just for our female customers. With our women's garments and boots, we considered the best fit, functionality and styles, all while never forgetting that protecting you from the cold is our highest priority. The result is an expanding women's collection that makes sense for a variety of temperatures.

Women's Softshell Jackets

RefrigiWear's® softshell jackets for women are less bulky than traditional insulated garments, providing a higher level of flexibility and a more streamlined fit. Softshells are exceptionally durable, water-repellent and very breathable.

Durable | Water-Repellent | Breathable | Wind-Tight | Stretch

HiVis

RefrigiWear® offers a wide range of high-visibility (HiVis) garments as well as handwear, footwear and headwear with HiVis accents because we know that absolutely nothing comes before the safety of your workforce. Many stock garments can also be customized to include reflective tape.

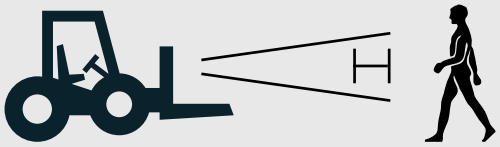

NEW HIGH-VISIBILITY SAFETY ENHANCEMENTS

KNOW WHEN PEOPLE ARE FACING YOU

Straight up and down, left to right retro reflective tape creates a standard "H" design when people are facing you.

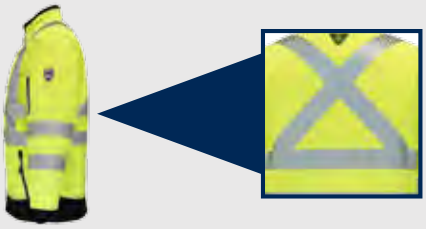

When facing you, a person may have a better understanding of where you may be. However, when operating machinery, never assume they are aware of your movements.

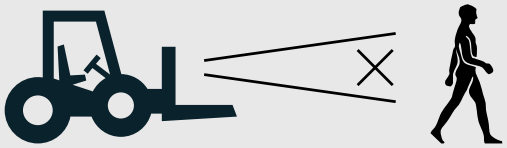

KNOW WHEN PEOPLE ARE FACING AWAY

The retro reflective "X" design makes the back of the jacket different from the front, creating a distinction when people are facing away from you.

When a person is facing away from you, it is important to be extra careful because they cannot see what's going on behind them or react as quickly since they are not as aware of their surroundings.

Customize Your Visibility

For areas where your workers need to be seen but do not require ANSI-compliant garments.

Our Ratings

Induradex™, Comfort and Product Ratings are three systems you will find when researching RefrigiWear® gloves.

Induradex™ Ratings

Induradex™ Ratings provide guidelines for the insulation, durability and dexterity of every glove compared to other gloves in the same category. Higher numbers on a scale of 1-10 represent a better rating.

Insulation: 6	Durability: 9	Dexterity: 8

Comfort Ratings

Comfort Ratings provide guidelines for the lowest temperature in which the gloves will still keep you comfortable.

Value, Standard, Premium

★★★

Product Ratings: Gloves are given Value (★), Standard (★ ★) and Premium (★ ★ ★) ratings based on insulation, materials, features and price.

Glove Anatomy

Below is a selection of features to consider when selecting your next pair of gloves. These features can help you find the ideal glove for your environment.

Insulation

Insulation is based on weight as well as layers of insulation. Multiple layers, including outershell and lining, can significantly increase warmth.

Water Repellent

Are you going to come into contact with water, snow or ice? Look for gloves that are waterproof or water-repellent.

Impact Protection

Impact protection gloves feature dense pads on the back of the hand, knuckles or fingers to help protect you from day-to-day bangs and pinches.

Abrasion Pads and Reinforced Thumb Crotch

Abrasion pads cover frequently used areas with an extra layer for comfort and durability. Reinforced thumb crotches are an extra layer between the thumb and forefinger, providing more toughness.

Grips or Coatings

If you consistently pick up or handle items, a glove with a coating or grip may be ideal for you. The coating layer provides more grip and results in less hand fatigue.

Ergo Fit

An ergonomic fit means that the glove is pre-curved so you don't have to work as hard to bend the glove.

Cuffs

There are many different types of cuffs, each with their own benefits, so think about what you will need most: protection, comfort, easy on/off or warmth.

0290 ArcticFit™

Insulation: 7	Durability: 8	Dexterity: 7

Induradex™ Ratings: Insulation, Durability and Dexterity ratings for gloves on a scale of 10 (Highest) to 1 (Lowest).

NEW Extreme Freezer Glove -30ºF

Impact Protection
All impact pads are stitched and not glued, providing extra protection that will not come off in the cold.

Reinforced Thumb Crotch and Ergo Fit
Increased durability in heavy use area (like when rolling shrink wrap around pallets). With ergonomic design to reduce hand fatigue.

Finger Construction
Rolled fingertips prevents irritation from seams.

Silicone on fingers also improves grip.

Padding on Palm
Shock absorbing pads on palms and fingers protect hands from bangs and bruises. Strategically placed pads at contact points keep hands warm when holding cold items.

Features

Kevlar reinforced thumb crotch

Glove pull features ID tag that can display names and glove size

WARMEST EVER

0679 Extreme Freezer Glove NEW

Insulation: 9	Durability: 9	Dexterity: 6

100g Thinsulate™ plus foam insulation with tricot lining
Knitted fabric back with synthetic leather palm
Pre-curved, ergonomic fit
Silicone grip pattern on palm | EVA palm pads
Impact protection on fingers, knuckles and back
Kevlar reinforced thumb crotch | Rolled fingertips
Silver reflective strip on knuckles | Stretch neoprene cuff
Pull tab with rubber ID tag on wrist
M, L, XL, 2XL | **Starting at $55**

★ ★ ★

-30°F COMFORT RATING -34°C

★ **Product Ratings:** Gloves are given Value (★), Standard (★ ★) and Premium (★ ★ ★) ratings based on insulation, materials, features and price.

NEW Extreme Freezer Mitt -30ºF

Soft Stretchable Cuff
Cuff design helps keep the mitts wind-tight and provides a snug fit so they aren't lost, no matter how extreme the activity.

Impact Protection
All impact pads are stitched and not glued, providing extra protection that will not come off in the cold.

More Warmth with Mitt Design
Mitts provide more warmth because the fingers remain close, rather than separated as with gloves.

Reinforced Thumb Crotch and Ergo Fit
Increased durability in heavy use area (like when rolling shrink wrap around pallets). With ergonomic design to reduce hand fatigue.

Padding on Palm
Shock absorbing pads on palms protect hands from bangs and bruises. Strategically placed pads at contact points keep hands warm when holding cold items.

Features

Kevlar stitching for extra durability

Silver reflective strip on knuckles

0617 Extreme Freezer Mitt NEW

Insulation: 9	Durability: 9	Dexterity: 6

Palm Coated & Specialty Gloves

RefrigiWear® Palm Coated gloves offer all the great features of our high quality knit gloves with the added benefits of additional grip and are pre-curved for a more ergonomic fit to reduce hand fatigue.

Specialty Gloves are specifically designed for unique situations, providing solutions like impact protection and extreme grip, along with cut resistant options for extra protection.

Sold by the Dozen | Volume Discounts Available

RefrigiWear's® knit gloves have various types of coatings to make gripping items easier, resulting in less hand fatigue. The coatings provide abrasion protection while the knit construction allows for more breathability and warmth.

RefrigiWear®
Footwear
SAFETY & COMFORT

Most work boots are not engineered to consider cold transfer when the ground or floor is as frigid as the air. At RefrigiWear®, we design all of our footwear for maximum comfort, durability, safety and especially warmth when you really need it. We also make sure that the materials can stand up to the cold and not breakdown in extreme conditions.

InduraSafe™ Ratings

InduraSafe™ Ratings indicate the level of Insulation, Durability and Slip Resistance a boot provides. The ratings are on a scale of 1-10 with a higher number meaning a better rating. The insulation rating is determined by the factors contributing to the warmth a boot provides. The material, construction and the anticipated lifespan of the boot help indicate durability. Slip resistance relies on the outsole and Mark II Slip Resistance Testing.

Comfort Ranges

RefrigiWear® developed our temperature Comfort Ranges to help guide you to the right level of insulation for your activity level and environment.

Boot Anatomy

To be safe, your feet need to be warm but also comfortable and protected. Footwear from RefrigiWear® features a variety of temperature ratings and protective components for your complete safety.

Insulation Package

Pay close attention to insulation and comfort ratings to choose a boot that is right for the temperatures in which you work. RefrigiWear's® insulated boots range from -10°F to -120°F to keep you warm and safe, while our non-insulated boots provide protection in milder temperatures. Socks and insoles can provide extra layers of warmth when needed.

Toe Design

Choose between boots with reinforced steel or composite toes. While both offer superb protection, composite toes are lighter for less foot fatigue and also conduct less cold in low temperatures.

Slip Resistance

Slip-resistant soles are an important part of any safety considerations. All of our boots go through Mark II slip resistance testing and are given a score with our InduraSafe™ Rating.

Ankle Support + Protection

A higher boot with a snug fit provides more support for your ankles and helps reduce fatigue by adding stability. By providing more coverage, a higher boot helps protect the critical ankle area from light scrapes and impacts. A padded ankle collar will also add comfort.

Vibram®

Vibram® is the world's premier manufacturer of outsoles for a wide range of products, including industrial, athletic and casual footwear. RefrigiWear® offers Vibram® soles on many of our products.

Leather Boots

Continued contact with frozen ground or floor all day requires special soles, insulation and other features that you will not find in other footwear. RefrigiWear's® collection of leather boots takes all of these elements into consideration for your safety and comfort. Benefits of leather boots also include high resistance to abrasions or tears plus a level of natural protection from external moisture.

VitaComfort™ by RefrigiWear

Your Feet Will Thank You.

Working on your feet all day can be painful if you have the wrong footwear. We've been listening, which is why we created VitaComfort™ — an integrated system that enhances comfort and absorbs the shock your feet receive from walking on hard floors or just standing all day. As a result, VitaComfort™ provides needed relief from foot fatigue and pain.

VitaComfort™ System

NEW

PREMIUM INSOLE

Adds stability, arch support, cushioning and pulls moisture away

Max Comfort

NEW

COMFORT GEL LAYER

Delivers maximum comfort, breathability and moisture wicking

UPPER

360-degree padding for maximum comfort

MIDSOLE

Lightweight and superior support. Shock absorbing.

NEW

OUTSOLE

Athletic, streamlined outsole with ultra slip resistance

Ultra Slip Resistant

VitaComfort™ takes care of your feet so you can concentrate on what's most important—getting the job done.

Light-weight, honeycomb design allows feet to breathe.

Gel layer molds around feet and provides cushioning to enhance comfort.

Shock-absorbing gel provides relief to knees and reduces foot fatigue.

Pac Boots and Liners

A **Pac Boot** is a boot with a removable lining to add warmth in extreme cold.

When choosing a pac boot, consider:

The height that you want | If you need waterproof or water resistent | The right temperature range for your job

Pac Boot Anatomy

1 Upper
Uppers are the parts of the boot covering the foot, ankles, and in some cases, your shins. The upper can be made of a variety of materials that enhance safety and comfort.

2 Aerotherm Insole
Add the optional Aerotherm Insole for an additional layer of warmth and comfort.

3 Insole
Supportive layer next to your foot that provides insulation and comfort.

4 Footbed
Shock-absorbing layer under the insole that protects your foot and helps absorb stress on your feet and knees.

5 Midsole
Cushioning layer that provides comfort and shock absorption.

6 Outsole
Bottom of the boot that provides slip-resistance, stability and protection.

Pac Liners

There are several key elements that any quality liner should have to keep feet warm the whole time you wear them and not just in the first few minutes.

MOISTURE FUNNEL LAYER

Once moisture is wicked away, it has to go somewhere. A hollow fiber layer funnels moisture and water vapor away from the foot for maximum warmth and comfort.

THERMAL PROPERTIES

The best liners will have a thermal membrane that reflects heat, thereby containing and actually using your body's heat to enhance warmth for your feet.

CUSHION LAYER

Just because you have insulation doesn't always mean you have cushioning for comfort. We suggest a liner with a layer that provides soft cushioning for less foot fatigue and stress.

INSULATION

This can be made of polytech foam or other material, but the quality and thickness of the foam will act as both insulator and cushion for your feet.

WICKING LAYER

One of the worst enemies of warmth is moisture. Your pac liner must wick moisture, especially sweat, away from your feet to maintain warmth.

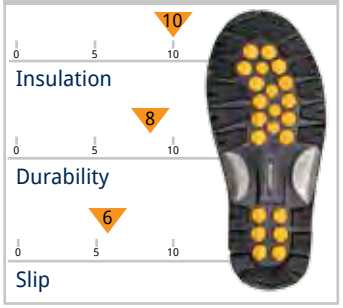

FAHRENHEIT -120° TO 0° COMFORT RANGE -84° TO -17° CELSIUS

114 Constructor™

0040 Aerotherm® Insole

Added Warmth and Comfort for Boots

RefrigiWear's® Aerotherm® Insoles create a thermal layer that immediately traps warmth and provides a barrier against the cold. The insoles are made with high-tech aerogel insulation between a layer of Aerotherm® foam, which prevents the loss of heat under compression. In effect, the Aerotherm® protects you from the cold, no matter how many steps you take in a day.

0040 Aerotherm® Insole

Waterproof

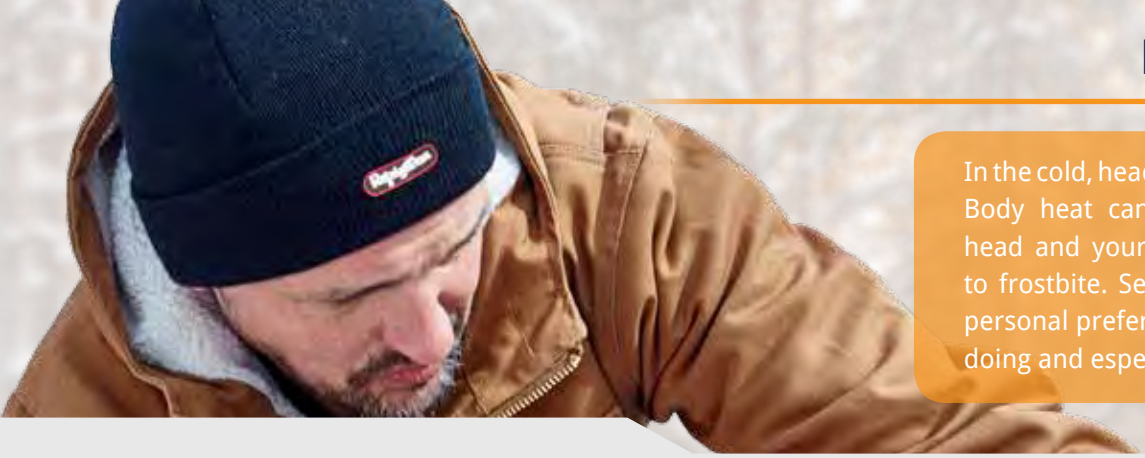

Excellent thermal barrier traps warmth and blocks cold from freezing floors
Aerogel insulation | High thermal performance | Waterproof

Trim to fit shoe size:

Full 6-13 | Half 7½-11½ | Starting at $20

InduraSafe™ Ratings: Insulation, Durability and Slip Resistance ratings for footwear are on a scale of 10 (Highest) to 1 (Lowest).

Size Charts on page 90

Headwear

In the cold, headwear cannot be an afterthought. Body heat can quickly be lost through your head and your ears are especially susceptible to frostbite. Selecting headwear should reflect personal preferences, the type of activity you're doing and especially the environment.

Masks & Balaclavas

In extreme temperatures, masks and balaclavas provide the most coverage for your face and head. Balaclavas are configurable as a hat, gaiter or mask, offering you flexibility if you move in and out of different environments throughout the day.

Coverage Needed - Masks, gaiters, caps and headbands all offer different levels of protection.

Material - The type of material, its thickness and the lining of headwear can be good indicators of warmth & comfort.

Water & Wind Resistance - Wet or windy environments can impact warmth as much or more than temperatures.

Moisture Wicking - Our bodies push a lot of heat to our heads, so consider moisture wicking materials to prevent perspiration build-up.

Safety - Consider HiVis colors or whether headwear will need to be worn under a hard hat.

Size Charts

Our size charts are provided in inches and include measuring instructions. If you are unsure about size, please take your measurements. Doing so will greatly reduce guesswork—and the need to return items that do not fit! If you have any questions regarding fit, sizes or taking your measurements, please call Customer Service at 800.645.3744.

Key Sizing Points

RefrigiWear® garments should fit loosely

If your sizing is borderline, choose the larger size

Sizing chart is based on Regulars [5'7"–6']

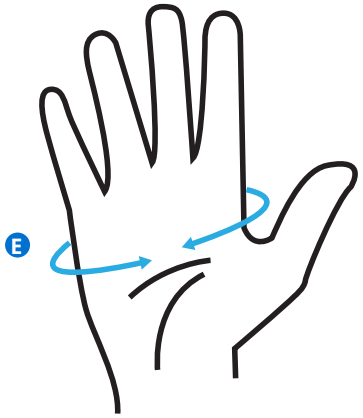

Tall sizes are approximately 2" longer in sleeves, 2" longer in inseam, and 2" longer in torso [6'1"– 6'5"]

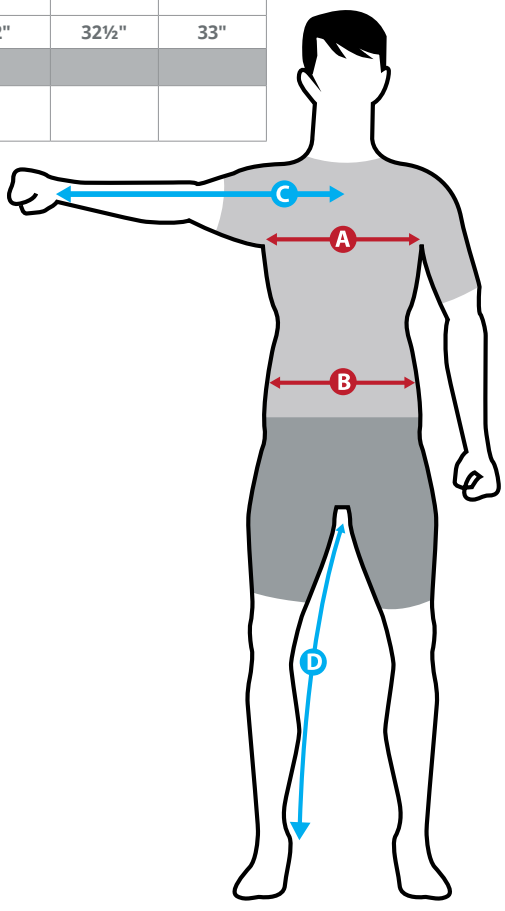

Short sizes are approximately 2" shorter in sleeves, 2" shorter in inseam, and 2" shorter in torso [5'–5'6"]

Custom sizes are available – contact Customer Service for assistance

Embroidery

With our embroidery, screen printing, patch and woven emblem technology, you can add logos, names and numbers to multiple locations on almost every RefrigiWear® garment. We control the entire embroidery process—from digitizing all the way through packaging—to ensure superior quality and timeliness of your order. Depending on the garment, you can apply embroidery to: right or left chest, right or left sleeve, back and leg.

Direct Embroidery

Direct embroidery provides a premium appearance and the most professional look. This is our most requested option. With Pantone® color matching, there are thousands of colors to choose so your embroidery will match your logo and brand exactly.

Direct embroidery remains intact for the life of the garment, and threads are color-fast for a significant length of time with typical wash and wear.

NEW

Screen Printing

Screen Printing impacts only the exterior of the garment and allows you to use intricate, picture quality images.

- Low cost alternative to embroidery
- Great for large graphics on back of garments
- Must be a minimum order of 50 units
- Allow 7-10 days for production

Self-Patch Emblem

Self-patch utilizes a swatch of the same material as your garment for an embroidering patch. This ensures a match to your garment but it can still be easily removed and replaced.

Woven Emblem

Woven designs give you greater flexibility on a patch that is sewn onto the garment. It also makes replacement easy.

FRIENDLY CUSTOMER SERVICE

Real, live customer service from Dahlonega, Georgia. Call toll free, 800.645.3744, M–F, 8:45 a.m.–5:00 p.m. Eastern Time (April to August). M–F, 8:45 a.m.–7 p.m. Eastern Time (September to March). Or email keepmewarm@refrigiwear.com.

GUARANTEE

Your total satisfaction with your RefrigiWear® purchase is important to us. If for any reason you are not pleased with your selection, contact our Customer Service Team at 800.645.3744.

COMFORT RATINGS

Comfort Ratings have been developed as a guideline for determining relative thermal insulation values. Activity levels, body metabolism, exposure time, age and other variables may affect your Comfort Rating preference. Comfort Rating values may be reduced over time as normal wear on materials and components occur.

GARMENT CARE

RefrigiWear® garments can be machine washed with a mild household detergent in warm water. Do not bleach. Tumble dry on low heat for 10 minutes, then hang and air-dry. Dry cleaning, industrial laundering and use of commercial degreasers are not recommended.

CLEANING SERVICES, REPAIRS AND ALTERATIONS

RefrigiWear® performs cleaning, repairs and alterations quickly and cost-effectively in our Dahlonega, Georgia factory. Repairs can be made on holes, torn cuffs, broken zippers, split seams and more. Alterations can include shortening sleeves or trousers, or adding pockets, leather patches or radio straps. Please allow two weeks for standard repairs or alterations, and three days for cleaning services.

To order any repair services, please contact customer service at 800.645.3744. Customer Service will email you with an RMA (Return Merchandise Authorization) that must be printed out and displayed on the outside of the carton, along with the bar code, in order for your repair to be processed.
