Chiari 1 malformation pronunciation

PETE DAL BELLO and JASON FLOYDHaving Chiari are clearly changing your life. Although no one suffers more than Chiarian, it also affects those around you. Your family and friends will suffer alongside you, so be grateful for the loved ones who remain with you. Most Chiarians usually experience symptoms years before diagnosis. It is also very common for chiarians to be misdiagnosed or told directly by a doctor that there is nothing wrong with them. Many Chiarians, myself too, were relieved to learn that this was not all in our heads. We just wish we didn't have to go for years and even decades (for me it was 36), before we finally know we have Chiari.The best thing to do is face Chiari's head as well as your research. Knowledge is power and the more you know, the easier it will be to talk to your doctor about Chiara, as well as answer any questions that come to you from friends and family. Spend some time studying this page, along with our Facebook page, and watch videos on the Chiari Association International Network (ICAN). Our website also includes things like Preparing for Your Appointment and a Doctor's Directory to help you. When it's time to tell a friend or family member about your Chiara, try not to get too deep with your answers at first. You can simply say: Chiari is a serious neurological disorder that affects the back of the brain called the cerebellum. If it's hard for them to pronounce Chiari, a good way to get them to remember the right excuse is to tell them it sounds like the key you put in the lock with R-E at the end. Key-R-E. For most people, a simple, direct answer will satisfy their curiosity. If you are asked to explain further, you can point to the back of my head and say: The back of my skull is too small for my cerebellum so the pressure drives the part into my back canal. This causes terrible headaches along with many other problems. You may or may not want to go into detail about your symptoms at this time, it's up to you. If you are asked how Chiari is treated you can say: It depends on the severity of the symptoms, but in many cases an operation is performed where the doctor removes a quarter of the size of the part of the back of the skull and the back of the C1, the upper vertebrae. This is done to relieve pressure on the cerebellum. The aim is to stop further progression of symptoms and hopefully relieve many of them. The frequently asked question is: What causes Chiari? At this point, the doctors aren't sure. Chiari is such a little-known disorder that not enough research has yet been done to know what causes it. There is also no cure. Another frequently asked question is: How many people does Chiari have? There are about 300,000 people diagnosed with Chiari in the United States, although this statistic may not accurately reflect number chiarians in our country. As more doctors become aware of Chiari and access to MRIs becomes more accessible, we believe the number will grow. Chiari is seen around the world, so most likely there are millions of Chiarians around the world. Another statistic to be found is that females are affected three times more often than males. Remember, many doctors and nurses have never heard of Chiari so do not expect non-medical people to be sympathetic to this disorder. By keeping your descriptions simple and short, you can usually answer people's questions without much confusion. If you can communicate proper pronouncing along with a brief explanation of Chiari to another person, then you have made talking about chiara a simple task and effectively expanded Chiari Awareness. Pete Dal Bello is the founder and president of the International Chiari Association (ICA). Jason Floyd is secretary of the ICA. Dal Bello has Chiari.
