OR What's new in Ableton Live Suite 9.5: Bugfixes:- It's not possible to accidentally save the Live Set to trash anymore.- The 'Warp as x bars' feature is improved so that to provide more musical and predictable values.- Light blue color tones have changed to avoid being confused with color selection when using the default live skin.- Artifacts can be introduced when transposition patterns warped with Complex/Pro.- Specific plug-ins would be triggered live to configure non-functional parameters after changing presets. What's new in version 9.1.9: - Added control surface support for Novation Launchkey MK2 Install Notes: Just drag Authorize.auz and drop to .exe (Ableton may not be running) Now Ableton open itself and will say it is enabled. 9.1.8 Version note enhancements and feature changes: Added control surface support for Alesis V and VI keyboards. Affected operating systems are: Windows XP, Windows Vista, OSX 10.5, and OSX 10.6. Languages: English, French, German, Italian, Japanese, SpanishHomepage : What's new 9.1.7 Release Notes: Feature enhancements and changes: Added control surface support for M-Audio Oxygen 4th generation controllers. Bug Fixes:When you select All Individual Songs in the Export Audio/Video dialog box, tracks using the tool's external device would not be exported correctly. Fixed an issue that caused modulations for clip arrangements to disappear when ammousing and remedied after duplicating a track. Improve for Retina displays (Mac OS X only). Improved graphics to display track status and plug-in browser icon on Retina displays (Mac OS X only). Fixed an issue with graphics that may have occurred on OS X 10.10 Yosemite when the Max for Live device was specified directly when the application started, for example, by double-clicking an ALS file or by having a template set containing a Max for Live device. Fixed an issue with graphics that may have occurred with OS X 10.10 Yosemite when you open the Export audio/video dialog box and set the Zoom Display preference to more than 100%. A simpler tool could lose some macro mapping after converting sampler to simpler and then enabling Simpler's Pitch Envelope.Fixed the gap Hz icon on the Simpler Speed LFO switch to Retina displayIn certain conditions, the voltage tool could produce unwanted noise bursts after loading the preset and then play the first note. When you import a clip or track that contains automation from the browser, you may experience a rollback and retry error. Live would also continue to fail when restoring the Live Set from the file back. Fixed an issue that may have occurred with the iZotope Trash 2 VST plug-in in Windows.Fixed a crash that may have occurred in Windows while Live scans or loads certain UAD plugins. Create, create, and stand out. Create ideas, make changes without stopping, and see everything at work. If you've used music software before, you're already familiar with half of Ableton Live. Live layout view is a familiar workspace: time moves from left to right, while tracks are stacked vertically. But Live also offers a revolutionary Session View: a unique sketpad for improvising, playing and playing with musical ideas, without limiting the timeline. Run freely and independently and stop any number of audio or MIDI loops - everything remains in sync. Almost everything in live works in real time - add, reassor or remove devices, play with flexible route routing Live and more without interrupting your creative flow. Ableton Live 9 new features* Process automation: In the range view, automation can now be recorded in real time directly in clips. Automation can move along with clips between session layout and display.* Find sounds quickly: The new Live viewer places all tools, effects, patterns, and plug-ins in one easy-to-use view. Drag and drop folders from anywhere on your PC, scan as you type and find everything quickly.* Discover new sounds: Live comes with a large selection (3500 in Suite edition) of production-ready sounds that have been carefully crafted with the help of over 40 artists, sound designers, and engineers. All sounds are equipped with Macro controls for quick access to their most fictional music parameters.* Get the right sound: All studio effects live for even better sound and usability. Glue Compressor is a new effect - an authentic model of the legendary cantilever bus compressor from the 80s EQ Eight has a bankruptcy mode for frequency isolation and expandable spectrum display. Gate and Compressor effects feature a Profit Reduction view that shows changes in signal level over time.* Extract music from samples: Live's new Harmony, Melody, and Drums To Midi instruments extract midi with a natural feel directly from your favorite parts of your music collection. You can also sing, tap the rhythm, play any solo instrument, then use Melody or Drums to MIDI to turn your recordings into MIDI clips that you can edit and reuse with any sound.* Edit details: Transposition, reverse and heating MIDI notes, or automate warp clips and add curves to automation envelopes. New tools and improved workflow enable quick and flexible editing of musical ideas.* Max for Live - now in the suite: Suite edition Live 9 comes with Max for live streaming and many unique instruments, effects and instruments. Max for Live itself includes 24 new devices such as convolutional reverb, new percussive synthesizer tools, MIDI echo, as well as redesigned versions of classics such as Step Sequencer and Buffer Shuffler 2.Co is new in Ableton Live 9.1.3: Enhancements and feature changes- Added control surface support for AKAI MPK225, MPK249, MPK261. Bug fixes:-Fixed an issue that caused CPU spikes to move MIDI notes in a track containing certain Ableton devices with automated parameters while the transfer is not playing.-Fixed CPU rupture and audio artifacts that may occur when moving MIDI notes in the midi editor if the track contained certain third-party VST plug-ins.-Fixed the error, which caused the active control scripts to be reloaded when the next control surface was activated.- Enabling multiple tracks to record and then running the Session Record button from APC40 MKII would only be uploaded to the currently selected track instead of all armed tracks.-Fixed an error that prevented Max for live devices from snapping the APC40 Clip Matrix.-Manual mapping for APC4 buttons 0 device bank will not work anymore after pressing the Shift button of the device.-Fixed the problem on Mackie Control Pro, where the display will not display the parameter values correctly , after prior permission of the level meters.-Fixed a graphical defect that may have occurred when changing the vertical zoom level of the composition arrangement through mackie control or max for live device. Under certain conditions, this could also lead to a failure.-Importing a session view clip containing automation for Max for Live devices into another live set would create automation stops in the layout view.-When the loop is activated in the layout view, MIDI persistent messages and other cc# messages would not be recorded reliably after the first retry would not be recorded. will not be recorded. unusually high amount of RAM when rendering a video with a 64-bit version on OSX.-When configuring plug-in parameters, some sliders in the live plug-in panel would not match the position of the appropriate parameter in the PLUG-IN GUI.-After installing the newly purchased package, an error message would appear in the live stream and the package could not be used until live was manually authorized again.-Text in deactivated clips was not readable with certain skins.-Fixed the error that occurred when you close the A UAD Audio Unit plug-in window by pressing the [ESC].-Fixed crash that may occur when you rename the Drum Rack washer when you start another pad.-Live could crash under certain conditions when running as a ReWire child and create a new live set without saving the previous set.-Under certain circumstances, live would remove send automation or modulation of the envelope from clips when exporting clips or songs to the browser. Additionally, live may crash when you use the undo function after such an export operation. Changes to Push:-Certain Max for live devices that accessed the push touch strip would not work properly. System requirements- Windows XP (64 bit), Windows Vista (64 bit), Windows 7 (64 bit) or Windows 8 (64 bit)- Multi-core processor - 2 GB RAM-1024x768 display-3GB free disk space
