

Company Profile

Revere is a privately held, CSIA-certified, electrical and automation engineering company headquartered in Birmingham, Alabama. We execute electrical and automation design-build projects that include front end engineering and design (FEED+™) all the way through installation and commissioning service for new construction, brown-field expansion, and legacy control system migration projects.

We support a wide range of deliverables that include the following: consulting, control system integration, e-house and custom panel fabrication, installation and commissioning service, wireless control solutions, industrial network design and configuration, and life cycle support.

Established in 1980, we are a founding member of the Automation Alliance Group of CSIA-certified integrators who collaborate to better serve global customers.

We are committed to risk mitigation for our customers. This is accomplished through a combination of breadth and depth of industry and equipment expertise, financial strength, certifications and standards, scalable services, and a collaboration portal for sharing project information.

Facilities include approximately 64,000 square feet of production and engineering space in Birmingham

Personnel:

- Total staff of 200
- 100 designers and engineers
- 5 IT and networking staff
- 10 PMI-certified project managers
- PE credentials in more than 30 states

From automation EPC projects to comprehensive after-market services, we are confident you will find us responsive to your needs and that you will understand why we say that Revere is engineered to serve.

Industries Served:

Oil & Gas
Water & Wastewater (Clean Water)
Metals – Steel, Aluminum, and Foundries
Mining & Material Processing
Specialty Chemical
Wood Products
Electric Utility Power
Textile & Non-Woven

Services Provided:

Professional Consulting
Control & Power System Integration
Industrial Network & Cyber Security
Wireless Communication Architecture
Control Panel Assembly
Electrical Installation
Legacy Controls Migration
On-Site Support

Capabilities:

Process Control
Discrete Control
Design-Build Services
15 kv and below Motor Control & Power Distribution
Drives and Drive Systems
Industrial Network & Wireless Solutions
Business Optimization
E-Houses
Instrument Selection & Design
Safety & Compliance Solutions
High Volume Panel Assembly
OEM Collaboration Programs
Risk Mitigation
