

# POWER AND CONTROL SYSTEMS FOR INDUSTRY AND UTILITIES

PROFESSIONAL EXPERIENCED CERTIFIED

*We have extensive experience on a huge variety of project types in plants throughout North America. Bring us your special need—we can handle it.*

## **We make special routine**

At Revere Control Systems, we have been routinely meeting the special power-oriented control system needs of plants like yours since 1980. Need a special configuration? A delivery expedited? A special combination of component brands? Special needs to match existing equipment? No problem. No problem at all. We'll even accommodate your special needs for the modifying, upgrading and refurbishing of existing equipment.

Most major suppliers resist special requirements, or they aren't capable of meeting your needs because "standard" projects are more profitable for them. At Revere, we're more concerned with giving you exactly what you need.

We are a full-service firm, capable of designing, building, installing and servicing control systems and switchgear for your plant. We have extensive experience on a huge variety of project types in plants throughout North America. Bring us your special need—we can handle it.

## **Power**

### **Power Distribution**

Our experience with switchgear is extensive and covers 600 V, 5 kV and 15 kV systems. We have deep expertise with bus system technology and have completed many projects involving additions to existing equipment. We also have extensive experience with relay panels and cabinets as well.

### **Pump and Conveyor Controls**

Our experience in pump controls spans virtually every type of pump application you're likely to encounter. We've successfully implemented countless custom configurations and combinations. The same is true for conveyor controls, where we have many years of experience, with particular emphasis in bulk material handling.

## Motor Control Centers

We build motor control centers of all sizes. Because we are an independent systems integrator, we have the ability to mix brands of components to match your controls to your existing lineups and service capabilities. Companies aligned with a single brand cannot meet such requests.

## Automation Products

### PLC/PC, HMI

We have worked with all major brands of PLC equipment and are adept at selecting the brand that yields the most cost-effective performance for the specific requirements of your application.

Brands we commonly use include Allen-Bradley, Siemens/TI, Modicon, Bristol Babcock, Automation Direct, Square D, and General Electric. We are also happy to use whichever brand you specify. Additionally, we are experienced with all major HMI software, including Wonderware, iFIX, Genesis, RSView, Citect, and GE Cimplicity.

## Projects

*Our wide range of project types includes the following::*

- 15 kV metalclad switchgear
- 5 kV metalclad switchgear
- 600 V motor control
- Relay cabinets
- PLC systems
- Bus modifications
- DC distribution panels
- AC drives
- DC motor control
- Material handling control systems
- Operator control panels

*We have worked with all major brands of PLC equipment and are adept at selecting the brand that yields the most cost-effective performance for the specific requirements of your application.*

*For more than three decades we've created satisfied customers because of our ability to treat every customer's special needs as part of our normal method of operation.*

## **Engineering is just the beginning**

The finished quality of any project begins with engineering. Approximately one-third of our employees hold engineering degrees; several hold Professional Engineer certifications. We can apply all of the required resources to ensure the success of your job. Our position as an independent systems integrator gives us the freedom to examine a variety of solutions and select the one that provides the best cost-performance ratio for your individual needs.

But engineering quality is only one aspect of customer satisfaction. When modifications or additions to your plant become necessary, we can help your staff assess the situation and identify the specific project needs, as well as helping you avoid pitfalls. We are here to make your job easier.

For more than three decades we've created satisfied customers because of our ability to treat every customer's special needs as part of our normal method of operation. We enjoy doing the out-of-the-ordinary projects. As a result, the service we provide you is also extraordinary.
