

SUPPORT SERVICES

PROFESSIONAL EXPERIENCED CERTIFIED

Customers say:

In our industry, speed, accuracy, and precision are paramount. When our equipment is down, it not only means lost revenue for our company, it means shutting down the production capacity of our customers and our customers' customers. When we needed help in a hurry, Revere Control stepped up. They were able to accurately diagnose our issue, order in parts that were available, build the custom parts that were necessary, and get to the job site quickly. The knowledge and professionalism of everyone involved was unparalleled and Revere got us back online with an absolute minimum of delay. When it has to be right and it has to be right the first time, Revere is our go-to provider.

Professional Services to Meet Your Needs

We offer a wide range of services focused on automation and control systems for numerous industries:

- Water & wastewater
- Mining, aggregate & cement
- Manufacturing
- Wood products
- Chemical
- Oil & gas: upstream, midstream and downstream
- Primary metals
- Food & beverage
- Power/cogeneration
- Electric power
- Textile/nonwoven

Engineering Services

Our full complement of engineering resources are available to support our service programs. These services include the following:

- FEED+ studies
- Industrial network security
- Specification development
- Virtualization and mobility solutions
- Grounding & power studies
- Migration planning
- Industrial network design
- Radio path studies
- Electrical automation
- Equipment upgrades & additions

Our automation, controls, information, and communication expertise allows us to not only perform maintenance and diagnose and repair outages, but also to review your current system and make recommendations for upgrades and improvements that can positively impact your plant's performance.

Compliance Services

We can help you ensure that when your employees work on or near live circuits that they work safely. We can ensure that your equipment is properly labeled, your people wear appropriate PPE gear, and that everyone is properly trained to avoid electrical shock hazards such as arc flash.

- Arc flash training
- Machine safety solutions
- Machine safety solutions
- Arc flash studies
- Regulatory compliance reporting

Maintenance & Troubleshooting Support Services

No matter the cause, down time of your plant's control systems costs you money. Automation and control technology is constantly changing, making it difficult and expensive to keep your staff current on every system component. We can shoulder that load for you, providing the expertise needed to keep your control systems and your plant working. Services include the following:

- Calibration support
- Equipment upgrades
- Network assessment
- Commissioning support
- Breakdown support, controls & drives
- Outage/turnaround support

System Support Agreements

We offer tailored maintenance plans and deep expertise to keep your systems running, day after day, year after year. Our support plans meet a wide range of needs and budgets, and we can tailor our plans to your specific needs, whether you need a fundamental plan or a comprehensive professional service agreement and 24/7 assistance for any control system issues. We even offer a custom plan allowing you to select only those services that meet your unique needs. Included in our plans is 24/7 access to all job related information, including O&M manuals. Our plans can include:

- Maintenance & compliance
- Remote troubleshooting & support
- Industrial network support
- Fiber optic network testing, termination, and certification
- Monitoring and reporting services
- Software maintenance & upgrades
- Telephone troubleshooting & support
- Report design & development
- Data management & backup
- Legacy system migration plans

RESPONSIVENESS • QUALITY • TRUST

Customers say:

Revere is a sub-contractor to us on the design-build project to construct two new wastewater treatment plants at Ft. Polk, LA. Working with Revere has been a wonderful experience, exemplified by great communication at all levels and on all issues. The scheduling has been spot on. We've never had to wait on Revere, and they've hit every milestone.

A few of the certifications earned by our IT personnel:

MCSE – Microsoft Certified Systems Engineer • MCP – Microsoft Certified Professional • MCSA – Microsoft Certified Systems Administrator • MCITP – Microsoft Certified Information Technology Professional • MTCNA – Mikrotik Certified Network Associate • UAC – Ubiquiti airMAX Certified • SCJP – Sun Certified Java Programmer • Barracuda NG Firewall Certified Security Engineer • Cisco IMINS – Cisco Certified Industrial Networking Specialist

Certifications that Matter

In addition to our UL, CSA, CE, and PMI certifications, all of which contribute to the quality of our production and our project execution, we have additional certifications that are important to our clients.

Corning Certified Installers

The LANscape® Network of Preferred Installers (NPI) enables installers to tap into an extended ecosystem of beneficial connections. Our ground-breaking network-style program offers a complete tip-to-tip solution by offering Corning Cable Systems innovative product lines, leveraging valuable relationships throughout the fiber optic industry, and presenting a 25-year LANscape Solutions and 10-year Intelligent Traffic System extended warranties to end users.

ISA Certified

Our technicians are certified by the International Society of Automation, meaning they have the highest degree of experience and training available. The ISA Certified Control Systems Technician Program (CCST) offers third-party recognition of technicians’ knowledge and skills in automation and control.

CSIA Certified

Earning Control Information Systems Integrators certification means that our business and service practices meet the standards for best practices in the systems integration industry. We believe strongly in raising the bar for the performance of our industry, and being CSIA certified is one way we support that goal.

Take the worry out of your electrical, I&C, and automation service needs with a single-source solution. Contact us to learn more about our professional services.
