Rosalind Franklin University of Medicine and Science and the Chicago Medical School reserve the right to change, at any time and without notice, their requirements, regulations, course and program offerings, fees, charges, and other matters addressed in this catalogue. RFUMS must reserve the right to modify or terminate programs described herein. However, modification of program requirements will not adversely affect those students already enrolled in a program, nor will termination of a program affect anything other than the closure of admission thereto.

Dear Prospective Student,

Chicago Medical School is proud to have educated physicians, scientists and researchers for 96 years. We are committed to continuing this tradition well into the future and, in doing so, plan to serve our primary mission of providing our students with a comprehensive medical education while preparing them for a career and life of excellence in medicine that our students will be responsible for the health of future generations, we are especially pleased that our School is located within a health sciences University that serves as a national leader in interprofessional education.

Our innovative educational programs, combined with our outstanding facilities and superb faculty, all make for an energized and exciting environment. It should become readily apparent to you why we and others within the University are greatly enjoying our “Life in Discovery!”

Your interest in the Chicago Medical School honors and inspires us. We hope your interest in our program is the start of a fulfilling and successful future.

Sincerely,

Arthur J. Ross, III, MD, MBA
Dean, Chicago Medical School
INTRODUCTION
The Chicago Medical School at Rosalind Franklin University of Medicine and Science is dedicated to encouraging and educating students to become competent, responsible, concerned physicians. The School seeks to help students acquire knowledge, skills and attitudes for a lifelong career of learning and professional service.

Students, faculty and administration strive together to meet these goals at all organizational levels. The Chicago Medical School provides an environment where students work closely with faculty and administration. The School is vitally concerned with meeting students' developmental needs, both professional and personal.

HISTORY
Rosalind Franklin University of Medicine and Science is a four-college University that was built around the Chicago Medical School (CMS), which has been educating physicians and furthering biomedical research for 95 years. Established in 1912, the Chicago Medical School's physician and citizen founders aimed to build a combined medical school and hospital in which employed men and women could study medicine at night, a common practice at the time. Many of Chicago's finest medical teachers and practitioners who had been associated with Jenner Medical School transferred to CMS when Jenner closed in 1917.

William Dorland, editor of the well-known medical dictionary, was dean of the School for a time. The School's most note-worthy period of development took place under the direction of John J. Sheinin, MD, PhD, MSc, who served as dean and president from 1932 to 1966. The School successfully met the challenges arising from the revolutionary restructuring of American medical education following the Flexner Report. In 1930, the School moved to what was to become one of the world's largest aggregations of medical facilities. Located just west of downtown Chicago, this complex contained three medical schools, seven hospitals, colleges of dentistry, pharmacy, nursing, and two undergraduate universities. CMS occupied an eleven-story facility in a renowned research and educational center.

In 1967, the University of Health Sciences (UHS) was established. The University comprised the Chicago Medical School, the School of Related Health Sciences (now College of Health Professions), and the School of Graduate and Postdoctoral Studies (SGPDS). In 1980, the University relocated to its current campus in North Chicago, IL, adjacent to the North Chicago Veterans Affairs Medical Center and Naval Station Great Lakes. The University, granted full accreditation by the North Central Association in 1980, represented one of the first educational institutions in the country devoted exclusively to educating men and women for a broad range of professional careers in health care and research. In 1993, the institution was renamed Finch University of Health Sciences in honor of its long-time leader and Chair of the Board of Trustees, Mr. Herman M. Finch. In 2001, The Dr. William M. Scholl College of Podiatric Medicine (established in 1912) became part of the University structure, which now comprises four colleges.

On January 2004, the University publicly announced its intent to change its name to Rosalind Franklin University of Medicine and Science, in honor of Rosalind Franklin, PhD, a pioneer in the field of DNA research. The name change became legal on March 1, 2004, at which time the School of Related Health Sciences also changed its name to College of Health Professions.
In addition to the name change and the announcement of several new strategic initiatives, the University is currently in the midst of profound physical growth. In October 2002, the University opened its Health Sciences Building, a 140,000-square-foot state-of-the-art facility that houses laboratories, auditoriums, classrooms, departmental offices, a student union, the Feet First Museum, University bookstore, recreational game room, exercise facility, and a café. The University became a residential campus for the first time in its history when three student housing facilities, totaling 180 apartments, opened in July 2003.

The University's Basic Sciences Building is a 400,000-square-foot facility that houses a 52,000-square-foot Library and The Daniel Solomon, MD, and Mary Ann Solomon Learning Resource Center, as well as administrative offices, classrooms, auditoriums, basic science departments, research and teaching laboratories, and dining areas. Located on the north end of campus is the Heather Margaret Bligh Cancer Research Laboratory, a cancer immunology research and treatment complex.

University enrollment is exceeds 1,800 with the bulk of its students enrolled in CMS. The University's total faculty is 820. Major hospital affiliates include: North Chicago Veterans Affairs Medical Center, John H. Stroger, Jr., Hospital of Cook County, Mount Sinai Hospital and Medical Center, and Advocate Lutheran General Hospital. The University's clinical campus consists of the North Chicago Veterans Affairs Medical Center, The Captain James A. Lovell Federal Health Center and the Rosalind Franklin University Health System.

Dr. Rosalind Franklin, through her pioneering work in the science of life and through her unflagging perseverance, serves as a role model for our faculty and students, and represents the future of biomedical science and integrated health care. Her history mirrors our own in many profound ways, marked by dedication to discovery even in the midst of difficult times. Upon that history, her legacy guides the future of the University itself.

After 95 years of excellence in healthcare education, Rosalind Franklin University of Medicine and Science has only just begun to write its history. We hope you will join us in creating bold visions for an ambitious future. To learn more about Dr. Rosalind Franklin and the University's dedication to her legacy, visit www.lifeindiscovery.com.

**MISSION**

Chicago Medical School (CMS) at Rosalind Franklin University of Medicine and Science educates physicians and scientists dedicated to providing exemplary, compassionate patient care and excellence in scientific discovery within an interprofessional environment.

CMS strives to instill in every student the incumbent medical and scientific knowledge, skills, attitudes, and values that the field of medicine and society expect of a physician. The following measurable competencies and their associated objectives, our touchstones of excellence, reflect this overall goal:

I. **Medical and Scientific Knowledge.** Demonstrate knowledge about established and evolving biomedical, clinical, epidemiological, and social-behavioral sciences, and apply this knowledge in caring for patients.

II. **Patient Care and Prevention.** Demonstrate patient care that is compassionate, appropriate, and effective.
for the promotion of health, prevention of illness, treatment of disease, and the end of life.

III. **Professionalism and Self-Awareness.** Demonstrate a commitment to professional service, adherence to ethical principles, sensitivity to diverse patient populations, and awareness of one's own interests and vulnerabilities.

IV. **Practice-Based, Life-Long Learning.** Demonstrate the ability to appraise and assimilate scientific evidence and methods to investigate, evaluate, and improve one's own patient care practices.

V. **Systems-Based, Interprofessional Practice.** Demonstrate an awareness of and responsiveness to the larger context of health care and the ability to call on system resources and other healthcare professionals to provide optimal care.

VI. **Interpersonal and Communication Skills.** Demonstrate effective understanding, information exchange, and teamwork with patients, their families, and other health professionals.

**VISION**
The vision of the Chicago Medical School is to be an outstanding community-based medical school with excellence and innovation in medical education, scientific discovery and clinical care.

**ACCREDITATION**
Rosalind Franklin University of Medicine and Science receives its degree-granting authority from the Illinois Board of Higher Education and is accredited through the North Central Association of Colleges and Schools.

North Central Association of Colleges and Schools
Higher Learning Commission
30 North LaSalle Street, Suite 2400
800.621.7440
312.263.0456

CMS is fully accredited by the Liaison Committee on Medical Education (LCME). The U.S. Department of Education recognizes the Liaison Committee on Medical Education (LCME) for accreditation of programs of medical education leading to the MD in the United States. Accreditation is a process of quality assurance in post-secondary education that determines whether an institution or program meets established standards for function, structure, and performance. The accreditation process also fosters institutional and program improvement. It also is a prerequisite for eligibility of graduates to obtain medical licensure in most states, and for students to sit for U.S. Medical Licensure Examinations, and to obtain federal student loans.

**EQUAL OPPORTUNITY**
It is the policy of Rosalind Franklin University of Medicine and Science not to discriminate on the basis of race, sex, sexual orientation, color, creed, religion, national origin, disability or age in admissions or employment or in any programs or activities. It is the University's intent to comply with applicable statutes and regulations, including Title IX of the 1972 Education Amendments and Section 504 of the Rehabilitation Act of 1973. Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act (ADA) of 1990 both
prohibit discrimination against individuals with disabilities by mandating a provision of reasonable accommodations to make limitations to what services can be provided. It is the University's goal to assist students in developing their potential in light of what is feasible and reasonable under the law. Refer to the RFUMS Student Handbook for Educational Opportunity Policies and Procedures.

LOCATION
The Chicago Medical School is located on the campus of Rosalind Franklin University of Medicine and Science, at 3333 Green Bay Road, North Chicago, IL 60064. The University is situated in the northern suburbs of Chicago, with easy access to downtown Chicago and the surrounding areas by car or public transportation. For directions and a map, click here.

APPLICATION PROCEDURE
Applicants for admission to the first-year class must be initiated through the American Medical College Application Services (AMCAS), sponsored by the Association of American Medical Colleges. Applications must be filled out and submitted online through the AMCAS Web site listed below. If you have any questions regarding your application, please contact AMCAS directly:

AMCAS
Section for Student Services
2501 M Street, N.W., Lobby 26
Washington, DC 20037-1300
www.aamc.org
(202) 828-0600

Designate Chicago Medical School on the drop-down list of medical schools provided in the AMCAS application. The deadline for receipt of applications at AMCAS is November 1st.

The MCAT (Medical College Admissions Test) is required for admission; Chicago Medical School will only accept MCAT scores that are no older than three years from the year you plan on matriculating. Application forms for the MCAT are available from your pre-medical advisor or by writing directly to:

MCAT
Program Office
P.O. Box 4056
Iowa City, Iowa 52243-4056
(319) 337-1357

Upon receipt of the AMCAS application, CMS will forward additional materials and instructions to you to complete the application. Applicants receiving an AMCAS fee waiver automatically receive a waiver of the CMS application fee.

EARLY DECISION PLAN
Some applicants may wish to consider Chicago Medical School their primary choice; such candidates should consider the optional Early Decision Plan (EDP). The procedure allows applicants to request and receive a decision from their first-choice medical school by October 1, before seeking acceptance elsewhere. Applicants should notify AMCAS of their intention to participate in the EDP. All supporting credentials must be in the AMCAS office by August 1. If the student is accepted, he or she is committed to attend CMS. If the applicant is
not accepted by the October 1 decision date, this person is then free to broaden their application activity to other schools. Ordinarily, students admitted through the EDP possess superior qualifications.

**Admissions Policy**
The administration, faculty and the members of the Chicago Medical School Student Admissions Committee are committed to excellence and diversity in its student body. Diverse backgrounds, experiences, and perspectives among the student body help to ensure a dynamic, productive and positive learning experience. In seeking to achieve diversity, the admissions committee is instructed to consider a wide range of factors in evaluating applicants for admission, including, but not limited to, the following: demonstrated intellectual capacity, academic achievement, employment history, life experiences motivation, character, personality, commitment to public service, the extent to which the applicant has overcome educational and/or economic obstacles, and other indicators that the applicant can succeed in their medical studies and make a significant contribution to providing improved medical care to the local community and general public. Although the admissions committee neither requires nor recommends that an applicant's college education consist of a major in any specific discipline, it does consider a sound preparatory education in the basic sciences, plus a broad background in the liberal arts to be important factors in considering admission into medical school.

**Admissions Requirements**
Applicants must complete a minimum of three full years of academic work at an accredited college or university prior to matriculation at CMS; most applicants enter with a baccalaureate degree. CMS does require all entering students to complete at least one academic year in each of the following subjects (including laboratory sections):
1) Biology/zoology
2) Inorganic chemistry (including quantitative analysis)
3) Organic chemistry
4) Physics
In addition, applicants are encouraged to take courses in mathematics (e.g., calculus, statistics), social sciences, English and the arts, because it is recognized that a physician should have a broad educational background. Also, all applicants must take and post their Medical College Admission Test scores. This test should be taken in the spring or fall of the year preceding anticipated entrance. The rigorous competition for admission into CMS means that applicants are sought whose scholastic performance places them in the upper third of their college class. However, high scholastic standing, per se, does not ensure admission into CMS. Strong emphasis is also placed on applicants' motivation, character, personality, and achievements. Applicants who have not done well in required courses are encouraged to pursue advanced-level courses related to those required courses.

**Admissions Committee Procedures**
The CMS Student Admissions Committee is responsible for selecting candidates for the entering class and for advanced standing. The Admissions Committee is comprised of faculty members and CMS students. The application process commences when CMS receives the completed AMCAS application form. The applicant is then required to submit a minimum of three letters of recommendation from professors under whom he or she has studied, or a single composite recommendation from a preprofessional advisory committee. Such letters of recommendation must come directly from the author or the school. Under the Family Educational Rights and
Privacy Act of 1974, applicants are required to either 1) waive their right of access to letters of recommendation, or 2) retain their right of access to letters submitted on their behalf. If an applicant retains the right to access the letters of recommendation, such access must be obtained through the former professor or committee who submitted the letter. All letters of recommendation obtained by CMS are treated as confidential. An applicant with an approved AMCAS application is also required to submit a Supplemental Application. Upon receipt of all required information, each application is screened to determine which applicants will be invited to CMS for a personal interview. No applicant is admitted without an interview. The applications of interviewed candidates will be reviewed from time to time, and favorable recommendations made to the Dean until the class is filled. The Dean of CMS has the power to accept or reject any recommendation made by the Committee. Applicants not accepted will be notified in writing. Those candidates offered admission must accept the School's offer of admission in writing within two weeks of the date of the letter offering them admission, and must simultaneously make a deposit of $100 to hold the position offered to them. Those who do not do so will be deemed to have rejected CMS's offer of admission and the positions offered to them will then be offered to others. The deposit will be credited toward tuition upon matriculation, or will be refunded if the applicant notifies the School by letter, within the permitted time, of his or her desire to withdraw.

**ADVANCED STANDING**

Advanced standing is limited to filling places in the second- or third-year classes that have been vacated by attrition. It is anticipated that very few vacancies will be available in upcoming years because of the low attrition rate of CMS students. Students from other American medical schools and United States citizens attending foreign medical schools will be given priority consideration should any vacancies exist. Applications for transfer become available February 1, with the deadline being June 1.

**NON-IMMIGRANT INTERNATIONAL STUDENTS**

The Chicago Medical School is authorized under federal law to enroll non-immigrant international students. Information about appropriate certification of international students is available in the Office of Admissions.

**ACADEMIC PERFORMANCE STANDARDS AND MEASUREMENT**

**Grading**

Grades in courses and clerkships at Chicago Medical School are determined on the basis of established standards of performance; a statistical distribution function for grades is not assumed. A pass/fail grading system is used for sophomore elective courses. All other courses and clerkships are graded on an A, B, C, F system. These grades are defined as follows:

- **A** — High Achievement (4 quality points)
- **B** — Above Average Achievement (3 quality points)
- **C** — Average Achievement (2 quality points)
- **F** — Fail (0 quality points)

A grade of *Incomplete* (I) is given when sufficient evaluation data have not yet been acquired and/or when the student has not yet met all of the requirements of the course or clerkship. An academic incomplete is given
when a student elects not to take an examination or complete an assignment at the scheduled time without a valid excuse and prior approval of the Dean. If a student receives an *Incomplete* (I) grade, necessary coursework must be completed by the deadline indicated by the instructor. If coursework is not completed by the deadline, the grade of I becomes a grade of F.

All required and elective clerkships taught in the University-affiliated hospitals will show a letter grade. When taken in a non-affiliated hospital or medical school a Pass/Fail grade may be used.

**Performance Expectations**

To meet the principal requirements for the MD degree, a student's performance must be evaluated as at least competent in each and every course and clerkship. In addition, the CMS student is expected to develop/maintain the standards of ethical integrity, professional judgment, and reliability in personal relationships essential to the competent, honest, responsible practice of medicine, as evidenced by specific acts within the medical student role. Failure to do so may result in probation or dismissal. The grade awarded in a clinically oriented course or clerkship reflects not only cognitive performance but also achievement of the six core competencies of Chicago Medical School. For clinical clerkships, performance on each of these factors is reported separately and is accompanied with a narrative description of the student's performance in the clerkship. A student must complete all requirements of the first two years of medical school and pass the USMLE Step 1 before starting any junior year clinical clerkships; this must be accomplished within three calendar years from the time of first matriculation. All requirements for graduation must be completed within 5-1/2 calendar years from the time of first matriculation.

A student may be dismissed upon failure to achieve satisfactory academic progress, which may include failure in more than two basic science courses or clinical clerkships, for twice failing a course of clerkship, for failing twelve or more weeks of senior electives, or for documented failure to develop/maintain acceptable standards of ethical integrity, professional judgment or reliability in personal relationships. A student may be dismissed for failure to meet the maximum time requirement set forth for completing the second, third and fourth years (see requirements for the MD degree).

Recommendations concerning advancement, graduation, dismissal and awards are made by the Student Evaluation, Promotion and Awards Committee (SEPAC). The voting committee is comprised of faculty members recommended by the Academic Assembly and two student members appointed by the Associated Dean for Student Affairs. The Associate Dean for Students in the School of Medicine represents students' interests before this committee.

**STUDENT RECORDS AND TRANSCRIPTS**

All documents and records pertaining to a student's admission and academic performance in the University are filed in the Office of the Registrar. Refer to the [RFUMS Student Handbook](#) for information regarding Students' Personal and Academic Information.

**LEAVE OF ABSENCE**

Students at Chicago Medical School are expected to maintain continuity and due diligence in meeting the performance expected of them throughout their medical school career. In particular, they are expected to attend and participate fully in all course evaluations of their performance and in all clinical course and clerkship
activities. A leave of absence is a temporary interruption of academic progress, granted for up to one year at a
time, which does not compromise academic objectives determined by the academic program. Any withdrawal
or leave of absence must be approved by the appropriate granting authority.

In general, a Leave-of-Absence may be granted to a CMS student for the purpose of reaching a specific goal
that is directly related to the student's medical career. This goal is to be pursued according to a specific plan of
action, to be submitted for approval along with the petition for Leave-of-Absence. Also, students in good
academic standing may be granted a leave for a worthwhile purpose not directly related to medicine.
Leaves-of-Absence requested for reasons of health, maternity, or finances will be granted as a matter of
course. Upon resolution of the conditions for which the Leave-of-Absence was granted, the student must make
a petition to be readmitted to the same academic standing he or she maintained when the leave began.

For policy information regarding Leave of Absence and Withdrawal, please visit the Registrar's Office website.

**TUITION AND OTHER EDUCATIONAL EXPENSES**

The following table shows the educational expenses for entering students at the Chicago Medical School
effective for the 2007-2008 academic year.

Direct Educational Expenses

- **Tuition (Annually)** .............................................. $43,341.00
- **Student Council Fee, Freshmen** ................................................................. 160.00
- **Disability Fee (varies)** ................................................................. 250.00
- **Student Service Fee** ........................................................................ 90.00

Health Insurance*: The University offers several health insurance plans.

Contact the Business Office at (847) 578-3279 for details.

Books & Supplies (Estimated-annual) ................................................................. 2,656.00

Estimated Additional Educational Expenses. . .During Academic Year

- **National Board Fees, USMLE Step I, Sophomores** ................................ 495.00
- **National Board Fees, USMLE Step II, Seniors** ........................................ 1,550.00

*Required of all CMS students.

**TUITION AND FEE PAYMENT POLICY**

All students will pay full tuition for 14 quarters.

Tuition and fees are due on the first day of each term according to the University's academic calendar,
regardless of when classes actually start. Beginning on the first day of each term, a penalty fee of 7% and an
interest fee calculated on a daily basis at the rate of 18% per annum is assessed to each student's account
which is not yet paid.

Failure to pay tuition and fees in full by the end of the academic term will result in a student not being allowed
to register for the subsequent term.

When a student is authorized to take an altered schedule or reduced course load because of academic
difficulties, personal health reasons, or for other reasons, full tuition will be charged.
REFUNDS AND WITHDRAWALS
If a student withdraws from the program before the end of the first week of classes, 100% refund of tuition is made. When withdrawal is made before the end of the second week, the refund is 75%; before the end of the third week, 50%; before the end of the fourth week, 25%. After that time, no refund is granted.

HEALTH CARE AND HEALTH INSURANCE
All students must have a health insurance policy in effect while enrolled in the University. Under the University's health insurance contract, students may purchase group hospitalization and medical care insurance for themselves and their families. Coverage under this plan is comprehensive. It is important to note that those individuals who choose to be covered by a plan other than the school's health insurance must present proof of current coverage at the time of registration. Also, health maintenance contracts (HMOs) will not be honored unless affiliated with the Rosalind Franklin University Health System.

Students should be vaccinated for tetanus/diphtheria, rubella (German measles), rubeola (measles), mumps, varicella (chicken pox), and polio. A tuberculosis skin test (PPD) within six months prior to matriculation is required. Hepatitis B vaccination is required (or at least started) prior to matriculation.

DISABILITY INSURANCE
All medical students presently enrolled at RFUMS are covered by a disability insurance policy. The policy, offered at group rates, yet on an individual basis, is designed to provide medical students with excellent coverage at reasonable rates. As with requirements for health insurance, the cost of this disability insurance program is the responsibility of each individual student. Cost is determined by age and will differ for individuals based on this fact. All students must be part of the disability group insurance.

STUDENTS WITH DISABILITIES
It is the intent of Rosalind Franklin University Medicine and Science and Chicago Medical School to comply with applicable law concerning students with disabilities; including Title IX of the 1972 Education Amendments, Section 504 of the Rehabilitation Act of 1973, and the Americans with Disabilities Act of 1990. These acts prohibit discrimination against individuals with disabilities by mandating the provision of reasonable accommodations to make programs and activities accessible to otherwise qualified individuals. These statutes recognize that there may be technical standards of behavior that must be met in the pursuit of a given profession or training. The Chicago Medical School has determined a set of Technical Standards of behavior, which it considers necessary for the candidate for the MD degree. These Technical Standards are listed below. Inquiries about the Medical School policies on disabilities should be directed to the Americans with Disabilities Act (ADA) Coordinator in the Division of Student Affairs and Enrollment Management.

TECHNICAL STANDARDS
A candidate for the MD degree must possess abilities and skills which include those that are observational, communicational, motor, intellectual-conceptual (integrative and quantitative), and behavioral and social. The use of a trained intermediary is not acceptable in many clinical situations in that it implies that a candidate's judgment must be mediated by someone else's power of selection and observation.

I. Observation
   The candidate must be able to acquire a defined level of required information as presented through
demonstrations and experiences in the basic sciences, including but not limited to information through physiologic and pharmacological demonstrations in animals, microbiological cultures and microscopic images of microorganisms and tissues in normal and pathologic states. Furthermore, a candidate must be able to:

- Observe a patient accurately, at a distance, and close at hand, with or without standard medical instrumentation, to acquire information from written documents, and to visualize information as presented in images from paper, films, slides or video.
- Interpret X-ray and other graphic images, and digital or analog representations of physiologic phenomenon (such as EKGs) with or without the use of assistive devices.

Such observation and information acquisition necessitates the functional use of visual, auditory and somatic sensation while being enhanced by the functional use of other sensory modalities. In any case where a candidate's ability to observe or acquire information through these sensory modalities is compromised, the candidate must demonstrate alternate means and/or abilities to acquire and demonstrate the essential information conveyed in this fashion. If the alternatives are acceptable, it is expected that obtaining and using such alternate means and/or abilities shall be the responsibility of the student. Costs of necessary accommodations should be reasonable and will be properly borne by the University when not the responsibility of the student or otherwise funded.

II. Communication
A candidate must be able to speak, to hear and to observe patients by sight in order to elicit information, describe changes in mood, activity and posture, and perceive nonverbal communications. A candidate must be able to communicate effectively and sensitively with patients and their families. Communication includes speech and writing. The candidate must be able to communicate effectively and efficiently in oral and written form with all members of the healthcare team.

III. Motor
It is required that a candidate possess the motor skills necessary to directly perform palpation, percussion, auscultation and other diagnostic and therapeutic maneuvers, basic laboratory tests and diagnostic and therapeutic procedures. The candidate must be able to execute motor movements reasonably required to provide general and emergency medical care, such as airway management, placement of intravenous catheters, cardiopulmonary resuscitation, application of pressure to control bleeding, suturing of wounds and the performance of simple obstetrical maneuvers. Such actions require coordination of both gross and fine muscular movements, equilibrium and functional use of the senses of touch and vision.

IV. Intellectual-Conceptual (Integrative and Quantitative) Abilities
The candidate must be able to measure, calculate, reason, analyze, integrate and synthesize. In addition, the candidate must be able to comprehend three-dimensional relationships and to understand the spatial relationships of structures. Problem solving, the critical skill demanded of physicians, requires all of these intellectual abilities. The candidate must be able to perform these problem-solving skills in a timely fashion.

V. Behavioral and Social Attributes
The candidate must possess the emotional health required for full utilization of his or her intellectual abilities, the exercise of good judgment, the prompt completion of all responsibilities attendant to the diagnosis and care of patients, and the development of mature, sensitive, and effective relationships with patients. The candidate must be able to tolerate physically taxing workloads and to function effectively.
under stress. He or she must be able to adapt to changing environments, to display flexibility, and to learn to function in the face of uncertainties inherent in the clinical problems of patients. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that will be assessed during the admissions and educational process.

**Requirements for the MD Degree**
To be awarded the MD degree from Chicago Medical School, a student must accomplish the following:

- Pass courses in Anatomy, Biochemistry, Clinical Epidemiology, Embryology, Genetics, Histology, Essentials of Clinical Reasoning, Medical Ethics, Molecular and Cell Biology, Neuroscience, HMTD 500, and Physiology to complete the first academic year.
- Pass courses in Essentials of Clinical Reasoning, Clinical Neuroscience, Microbiology, Pathology, Pharmacology, Clinical Skills and Preventive Medicine to complete the second academic year. Students must complete 3 credits of sophomore electives and must pass the United States Medical Licensure Examination (USMLE) Step 1 to complete the second year of the curriculum.
- Pass clinical clerkships in Ambulatory Care, Emergency Medicine, Family Medicine, Medicine, Neurology, Obstetrics/Gynecology, Pediatrics, Psychiatry and Surgery to complete the required basic clerkships.
- Pass a required Sub-Internship and 32 weeks of approved electives; Students must also pass the United States Medical Licensure Examination (USMLE) Step 2 ck and sit for step 2 CS to graduate.
- Perform all student functions in a professional and ethical manner.
- Meet the Technical Standards of the University as delineated below.
- Complete all requirements in no more than 5-1/2 years from first matriculation.

**Requirements for the Combined MD/MS Degree**
The combined degree program leading to the MD/MS degree is designed for select students interested in an in-depth study of one of the basic medical sciences combined with research training. The MS degree may be earned by at least one year of full-time graduate study plus graduate study during unscheduled or elective periods of the Medical School curriculum. In the latter case, the student will spend selected periods of study as a full-time graduate student. This plan may permit receipt of the MS and MD degree at the same time.

The MS degree may be obtained in the disciplines encompassed in the Departments of Biochemistry and Molecular Biology, Cell Biology and Anatomy, Cellular and Molecular Pharmacology, Microbiology and Immunology, Neuroscience, Pathology, and Biophysics.

Application for the MD/MS program is made after acceptance into Medical School. While preference for admission to this program will be given to students with a strong background in the natural sciences, applicants with pertinent research experience should not hesitate to express their interests.

**Requirements for the Combined MD/PhD Degree**
The combined MD/PhD program is designed for selected students who are interested in a research or academic career and whose undergraduate education has placed major emphasis on science. The major purpose of the program is to prepare medical scientists skilled in the study of modern biology as members of clinical and pre-clinical faculties of medicine or as clinical investigators.
The combined degree program requires that the student devote four to five years in a full-time graduate didactic and research program before entering the medical school. The combined program requires a minimum of six years of full-time study for its completion.

**MASTER OF SCIENCE PROGRAMS IN CLINICALLY ORIENTED SUBJECTS FOR MEDICAL STUDENTS**
The Chicago Medical School at Rosalind Franklin University of Medicine and Science offers selected medical students the opportunity to earn the Doctor of Medicine degree and a clinically oriented Master of Science degree. The following program is offered: Pathology

The Master of Science course of study is provided during the four year medical school curriculum. There is no additional tuition charge for medical students selected for the MD and clinically oriented MS Program.

**MD WITH DISTINCTION IN RESEARCH PROGRAM**
This program offers students with a special interest in research the opportunity to pursue a project in depth in either basic or clinical sciences, under the direction of a research mentor. Students will be required to submit a written project proposal (with the aid of the mentor), to identify a faculty committee (other than the mentor) to oversee the student’s progress, and to submit a final project report with data of publishable quality. Upon satisfactory completion, students receive a certificate and recognition on Awards Day, and a notation will appear on the student’s transcript.

**EDUCATIONAL OBJECTIVES**
The objectives of the Chicago Medical School's educational program were redefined in fall of 2004, with all objectives aligned with the six measurable competencies.

I. **Medical and Scientific Knowledge.** Demonstrate knowledge about established and evolving biomedical, clinical, epidemiological, and social-behavioral sciences, and apply this knowledge in caring for ill and healthy patients of all ages. Specifically, the student must demonstrate:
   1. Knowledge of the normal structure and function of the body, from individual organ systems to the integrated whole, to include developmental and aging processes.
   2. Knowledge of the molecular, biochemical, and cellular mechanisms that underlie body function.
   4. Knowledge of the altered structure and function (pathology and pathophysiology) of the body and its major organ systems.
   5. Understanding the scientific method and its application in establishing the cause of disease and the efficacy of traditional and nontraditional therapies.
   6. Knowledge of the economic, psychological, social, environmental, and cultural determinants of health and illness.
   7. Knowledge of the epidemiology of common illnesses within defined populations, the systematic approaches used in reducing the incidence and prevalence, as well as the prevention of those illnesses within cultural and socioeconomic context.
   8. Knowledge of the principles of pharmacology and therapeutic decision-making.
   9. Knowledge of the principles of emerging disciplines (e.g., genomics, proteomics, and bioinformatics).
   10. Knowledge of the scientific principles underlying diagnostic methodologies, clinical, laboratory,
pathologic, and imaging, and the ability to use them appropriately.

II. **Patient Care and Prevention.** Demonstrate patient-centered care that is compassionate, appropriate, and effective for the promotion of health, quality of life, prevention of illness, treatment of disease, and the end of life. Specifically, students must:

1. Treat patients with respect for their privacy, dignity, individual integrity, and culture.
2. Obtain an accurate and complete medical, social, and occupational history that includes issues specific to age, gender, culture, and socioeconomic status.
3. Perform a complete and symptom-focused examination, as appropriate, including a mental status examination.
4. Perform routine technical procedures.
5. Interpret the results of commonly used diagnostic procedures.
6. Demonstrate appropriate deductive reasoning in solving clinical problems.
7. Construct appropriate diagnostic and therapeutic strategies for patients with common acute and chronic conditions.
8. Demonstrate shared decision-making model of patient care.
9. Demonstrate the ability to use preventive medical strategies in patient care in conjunction with other healthcare professionals.
10. Recognize patients with life-threatening conditions and institute appropriate initial therapy.
11. Recognize and outline an initial course of management for patients with serious conditions requiring critical care.
12. Demonstrate knowledge of the mechanisms and modalities used to relieve pain and suffering.
13. Identify factors that place individuals at risk for disease or injury, select appropriate tests for detecting specific diseases or early stages of disease, and determine strategies for responding appropriately.

III. **Professionalism and Self-Awareness.** Demonstrate a commitment to professional service, adherence to ethical principles, sensitivity to diverse patient populations, and awareness of one's own interests and vulnerabilities. Specifically, students must:

1. Apply the theories and principles that govern ethical decision-making and address the major ethical dilemmas in medicine, particularly those that arise at the beginning and end of life.
2. Recognize one's own biases in ethical decision-making.
3. Adhere to principles of confidentiality, scientific and academic integrity, and informed consent.
4. Demonstrate respect, compassion, integrity, and altruism in relationships with patients, families, and colleagues.
5. Advocate the interests of one's patients over oneself.
6. Understand the financial, organizational, and other conflicts of interest inherent in the practice of medicine.
7. Recognize and accept limitations to one's knowledge and clinical skills and strive continuously to improve them, and seek appropriate assistance when necessary.
8. Demonstrate a commitment to serve communities and society, and care for members of traditionally underserved populations.
9. Demonstrate sensitivity and responsiveness to the gender, age, culture, religion, sexual orientation, socioeconomic status, beliefs, behaviors, and disabilities of patients and professional colleagues, including awareness of one's own cultural perspective.
10. Demonstrate awareness of one's own personal vulnerabilities, seek help and advice when necessary.
needed, and develop appropriate coping strategies.

11. Seek and respond appropriately to performance feedback.

12. Maintain effective balance of personal and professional commitments.

IV. Practice-Based, Life-Long Learning. Demonstrate the ability to appraise and assimilate scientific evidence to evaluate and improve patient care practices. Specifically, students must:

1. Demonstrate knowledge of the principles and methodologies of continuous learning of relevant scientific and clinical advances, educating oneself and one's patients, and making decisions relevant to the care of individuals and populations.

2. Search for new evidence regarding diagnosis, prognosis, and treatment of specific diseases, and integrate this knowledge into patient care.

3. Apply knowledge of study designs and statistical methods to the appraisal of clinical studies and other information on diagnostic and therapeutic effectiveness.

4. Use electronic databases and other resources to access, manage, and utilize biomedical information for solving clinical problems.

5. Develop and maintain a willingness to self-assess, learn from error, and use errors to improve processes of care.

6. Apply Evidence-Based Medicine to locate, appraise, and assimilate “best practices” in relation to patients' health problems.

V. Systems-Based, Interprofessional Practice. Demonstrate an awareness of and responsiveness to the larger context of health care and be able to call on system resources and other healthcare professionals to provide optimal care. Specifically, students must:

1. Cooperate, collaborate, communicate, and work in teams to ensure that care is continuous and reliable; acknowledge and respect the roles of other health professionals in providing needed services to individual patients and communities.

2. Understand the health needs of a community and population and how they are prioritized.

3. Understand the limitations and opportunities inherent in various practice types and delivery systems, including methods of controlling healthcare costs and allocating resources so that the quality of care is not compromised.

4. Understand the importance of evidence-based, cost-benefit analyses for improving the prevention, diagnosis, and management of diseases.

5. Advocate for quality of care and assist individual patients in dealing effectively with complex healthcare systems.

6. Demonstrate knowledge of practice management.

7. Identify and address systematic practices that increase the risk for patients.

VI. Interpersonal and Communication Skills. Demonstrate effective understanding, information exchange, and teamwork with patients, their families, and other health professionals. Specifically, students must:

1. Demonstrate the ability to sustain therapeutic, ethically sound, respectful professional relationships with patients, their families, and colleagues.

2. Use effective listening, questioning, nonverbal, and writing skills to communicate with patients, families, and professional associates, seeking assistance when necessary (e.g., call an interpreter).

3. Maintain comprehensive, timely, and legible medical records.

4. Work effectively with others as a member of a healthcare team or other professional group.

5. Demonstrate techniques of conflict-management.
6. Demonstrate effective communication of scientific and medical information to educate patients and their families, as well as colleagues.
7. Be able to communicate with patients and their families about all aspects of their well-being.

STATEMENT OF POLICY ON PROFESSIONALISM AND ETHICS
All students at Rosalind Franklin University are expected to exhibit professional, responsible and ethical behavior. Students should display this behavior as students in the University, as health care providers in the clinical setting and as researchers in the laboratory or clinic. All students should, therefore, possess the highest degree of personal integrity and be able to reason about ethical issues in their professional life. Students are expected to treat patients and research subjects with respect, compassion and sincerity, irrespective of race, color, creed, ethnic origin, religion, disability, gender, sexual orientation, or socioeconomic class, and to maintain strict confidentiality. Students are expected to be honest and trustworthy, to respect the property of others, and to follow the code of professional ethics appropriate to their discipline. Any departures from these standards may result in disciplinary action.

STUDENT TREATMENT
Students have a right to work and study in an environment free from harassment; as such, the University will not tolerate student mistreatment. A primary goal of RFUMS is the education of students who will meet the health care needs of society in a caring, competent, and professional manner. Insensitivity during training/education runs counter to the fundamental tenets of health care and impairs the ability of many students to maintain their idealism, caring, and compassion past training into their careers. Refer to the RFUMS Student Handbook for the Student Mistreatment Statement.

TEACHING HOSPITAL AFFILIATIONS
Advocate Christ Medical Center is a 648-bed, non-for-profit teaching, research and referral medical center in Oak Lawn, IL. It also is home to Advocate Hope Children’s Hospital, a free standing facility which is one of the most comprehensive providers of pediatric care in the state. The hospital provides 80,000 emergency room visits and 335,356 outpatient visits per year, admits 38,877 patients per year and has an average occupancy rate of 88% with an average length of stay of 5.2 days. The medical center is a leader in cardiology, pediatrics, surgical services, oncology, women’s services and emergency medicine.
Advocate Illinois Masonic Medical Center is a 309-bed teaching hospital located in the Lakeview neighborhood on the north side of Chicago. The hospital has served the North Side community of Chicago for more than 100 years. The hospital provides 38,534 emergency room visits and 157,257 outpatient visits per year, admits 18,981 patients per year and has an average occupancy rate of 74% with an average length of stay of 4.95 days. As a level I trauma center, the hospital is located just east of the Edens Expressway (I-94), close to Wrigley Field.
Advocate Lutheran General Hospital is a 582-bed teaching, research and referral hospital, and a Level I trauma center. The hospital provides 57,400 emergency room visits and 294,665 outpatient visits per year, and admits 29,241 patients per year and has an average occupancy rate of 69% with an average length of stay of 5.13 days. It also is home to Advocate Lutheran General Children’s Hospital. Located in Park Ridge, IL, the hospital serves the north and northwest suburbs of Chicago.
John H. Stroger, Jr., Hospital of Cook County is a 460-bed non-for-profit teaching and research medical
center, caring for the underserved residents of Cook County. Located in downtown Chicago, the Hospital serves as the hub for the Cook County Bureau of Health Services’ most serious and complicated medical services, providing 844,638 outpatient visits and admitting 23,511 patients per year with an average length of stay of 5.19 days. It also enhances the delivery of specialty and sub-specialty care for the entire Bureau network.

**Mount Sinai Hospital** is a 432-bed teaching, research and tertiary care facility which is a part of the Sinai Health System, along with Schwab Rehabilitation Hospital, Sinai Community Institute, Sinai Medical Group and Sinai Health First. The hospital provides 46,889 emergency room visits and 1,084,682 outpatient visits per year and admits 21,064 patients per year with an average length of stay of 3.9 days. It is located in downtown Chicago just west of the Kennedy Expressway (I-90/94).

**North Chicago VA Medical Center** is a 150-bed teaching hospital located on Green Bay Road next to the Chicago Medical School at RFUMS. NCVAMC serves as the long-term care referral center for this area’s medical and mental health patients with 204 nursing home care beds, a 60-bed domiciliary for homeless veterans, and 89 beds for alcohol and drug abuse treatment. The hospital provides 14,638 emergency room visits, 223,433 outpatient visits and admits 1,941 patients per year with an average stay of 7 days. The Department of Veterans Affairs (VA) and the Department of Defense (DoD) have recently expanded their cooperative efforts in metropolitan Chicago with an agreement to coordinate healthcare operations in the North Chicago-Great Lakes areas for a federal hospital. The integration of the NCVAMC with the Great Lakes Naval Medical Center will involve all inpatient and emergency care services. The integration will be completed in 2010 when all clinical services are fully integrated in the new Federal HealthCare Medical Center.

**CONTINUING MEDICAL EDUCATION**

Continuing medical education is considered an integral part of the continuum of medical education in the School and in the life-long process of education of the physician. Since 1974, the Medical School has sought to participate in this learning endeavor through the Office of Clinical Affairs. The objectives of this program are to:

1. Provide high-quality educational programs for our alumni as well as physicians of the local, regional or national community based on identified learning needs.
2. Encourage faculty to utilize new program formats to improve teaching techniques and to expand opportunities for learning based on learners' needs.
3. Provide a forum for school and community-based physicians to identify as well as to explore solutions to health problems.
4. Apply the results of research and methodology of critical assessment of new data to the needs of the community-based physician.

Each year, about 30 symposia on a wide variety of topics are sponsored by the office in conjunction with the school departments. About 2,500 registrants attend these courses annually and receive more than 150 hours of instruction. In addition, each month 40 to 50 conferences, grand rounds and seminars are sponsored by the CME office on campus and at affiliated hospitals.

The education program is fully accredited by the Accreditation Council for Continuing Medical Education and provides appropriate credit for the Physician's Recognition Award of the American Medical Association. Credit is also applicable for state medical licensure.
**Residency Programs**
The Chicago Medical School offers accredited residency and fellowship training programs in major medical specialties and subspecialties. More information can be obtained from the appropriate department chair or from the Senior Associate Dean for Clinical Affairs.

**Financial Assistance**
The Financial Aid Office at Rosalind Franklin University of Medicine and Science (RFUMS) is committed to helping students secure the funding necessary to realize their educational goals. Financial Aid is awarded to students in the form of loans, work-study, and scholarships.

To apply for financial aid, students must complete an annual financial aid application, which is available on the Financial Aid Office website. Additionally, students must complete a Free Application for Federal Student Aid (FAFSA) and use the school code 001659. FAFSA results are used to assess student need, which is used in the awarding of subsidized Federal loans.

Students needing additional information may contact the RFUMS Financial Aid Office by calling (847) 578-3217 or via e-mail at financial.aid@rosalindfranklin.edu.

**CMS Alumni Scholarships and Trustee Merit Scholarships**
The University awards a select number of scholarships for Chicago Medical School students. The Trustee merit and CMS Alumni Scholarships are highly selective and are made possible through the generous support of the University's Board of Trustees and Chicago Medical School alumni.

**Private CMS Scholarships and Loans**
Through the efforts of several CMS benefactors, a limited number of direct gift awards and a restricted amount of loan funds are made available to medical students experiencing extreme financial need. Amounts vary according to need and the availability of funds.

**Armed Forces Health Professions Scholarships**
This program provides financial assistance to medical students in exchange for active duty service in the Armed Forces (Air Force, Army, Navy). One year of service as a medical officer is required for each year of financial support, with a minimum of 3 years of service. The Armed Forces pays full tuition, fees, books, supplies, equipment, and a monthly stipend for living expenses. Army (414) 476-6622, Navy (847) 688-7100, ext. 165, Air Force (312) 922-2923.

**National Health Service Corps Scholarship**
This competitive program provides scholarship funds to medical students who agree to practice medicine in a high priority health manpower shortage area, as assigned by the NHSC. The minimum service obligation is two years. The scholarship provides for payment of tuition, required fees, and a monthly living expense stipend. For additional information on NHSC Scholarship, contact the Bureau of Health Professions at 1-800-221-9393.
ACADEMIC RECORDS
A copy of each student's complete academic record at the University is furnished upon request to him/her after each academic quarter attended – a written request form is available on the Registrar's Website. Students are encouraged to periodically monitor their academic progress via WebAdvisor.

ACADEMIC CALENDAR
All Schools within Rosalind Franklin University operate under a quarter calendar and credit is expressed in quarter hours.

STUDENT HOUSING
RFUMS offers on-campus living for students in modern, state-of-the-art apartments. For more information about the one- and two-bedroom apartments or to learn how the Office of Student Housing can assist you in locating off-campus housing, visit the Campus Housing website.

STUDENT SERVICES AND PROGRAMS
The Division of Student Affairs and Enrollment Management helps students maximize their academic experience and supports their academic success by fostering their professional, mental, physical, and social development and by enhancing the quality of campus life. Programs and services are provided to augment students’ ability to learn and develop life skills necessary to become productive and caring members of our global society. Programs and services include academic support services, multicultural student services, student counseling service, student life, and tutoring and study skills assistance. See the RFUMS Student Handbook for a list and description of programs and services offered and visit the Division website.

CMS OFFICE FOR STUDENT AFFAIRS
Throughout the student’s medical education, the CMS Office for Student Affairs provides resources, programs, and support to ensure a smooth progression through medical school and transition to residency. From orientation and the white coat ceremony to Senior Awards Day and graduation, the Office oversees the students’ academic progress and professional development.

CAREER COUNSELING
Throughout medical school, students are exposed to educational programs and various resources to enhance their career decision-making skills. Student-sponsored organizations play a significant role in introducing students to different medical fields. Additionally, the CMS Office for Student Affairs oversees a structured and well-developed career information program which includes a faculty-student advisor program. The AMA-AAMC Careers in Medicine is available for the benefit of medical students.

CMS OFFICE FOR MEDICAL CURRICULUM
The CMS Office for Medical Curriculum designs, schedules, and evaluates the CMS curriculum. Working with the Educational Affairs Committee of faculty and students, this office implements the CMS curriculum, schedules classes, gathers student and faculty evaluations, and analyzes student performance against national standards. The Office for Medical Curriculum values the coordination and integration of all the curricular elements.
The Office for Medical Curriculum also manages several interdisciplinary courses in the CMS curriculum, including first-year courses in Epidemiology and Medical Ethics and several Sophomore and Senior Elective courses.

**STUDENT ORGANIZATIONS, SERVICES AND ACTIVITIES**

The Chicago Medical School is concerned with the total educational environment of its students and strives to facilitate their personal growth as well as intellectual development. For a list of student organizations, visit the [Office of Student Life](#).

**University Student Council**

Students in all schools participate in the University Executive Student Council. This group, organized and run entirely by students, concerns itself with the overall policy and direction of the institution as these relate to student concerns. In addition, the Council plans and supports campus social events and student delegate trips to national professional group meetings. It also names student representatives to school committees and appoints observers to the University Board of Trustees. In addition to the representatives from each school, all interested students in any of the schools are welcome to participate voluntarily in the Council's activities.

In addition to the University Student Council, CMS has chapters in many of the national medical student associations. These include the American Medical Student Association, American Medical Women's Association, Student National Medical Association, Organization of Student Representatives (student branch of the Association of American Medical Colleges) and Beta Tau (CMS chapter of the national coed medical fraternity, Phi Delta Epsilon).

**Student Participation in University Governance**

Student representatives participate as members of most committees of the medical school and have their own representative on the School's Faculty Executive Council and Academic Assembly. A few of the committees on which students serve include: Admissions, Student Evaluation, Promotion and Awards, Educational Affairs, Faculty-Student Forum and faculty search committees.

**HONORS, AWARDS AND PRIZES**

The Chicago Medical School publicly recognizes outstanding scholarship, research accomplishments and community service of individual students. As part of the commencement activities in June, graduates are recognized for meritorious achievements during their Medical School careers.

**Alpha Omega Alpha**

Alpha Omega Alpha Honor Medical Society was organized nationally in 1902; the Chicago Medical School Chapter was chartered in 1965. The aims of this society are the promotion of scholarship and research in medical schools, the encouragement of high standards of character and conduct among students and graduates, and the recognition of high attainment in medical science and practice. Students who have demonstrated leadership and academic promise of future achievement are elected. Membership is elected from the top 25 percent of any graduating class. Honorary membership in the society, as well as honorary alumni and faculty membership, may be conferred upon persons who have distinguished themselves in various areas of medicine, teaching, research and practice.
Gold Humanism in Medicine Honor Society: Chicago Medical School
The Gold Humanism Honor Society (GHHS) honors medical students, residents, role-model physician teachers and other exemplars recognized for “demonstrated excellence in clinical care, leadership, compassion and dedication to service.” Organized to elevate the values of humanism and professionalism within the field of medicine and its constituent institutions, the Society plays an important role in the educational environment at Chicago Medical School. Students are selected for membership during their junior year, based on peer nomination with final selection by a committee of students and faculty members. GHHS student members are responsible for projects throughout the year.

Awards and Prizes
The Board of Trustees Scholarship Award
The Alumni Association Scholastic Achievement Award
The Clerkship Awards
The Dean's Award for Service to the School
The John J. Sheinin Research Award
The Leonard Tow Humanism in Medicine Award

STUDENT POLICIES, RECORDS AND RESOURCES
Refer to the RFUMS Student Handbook for informational topics which include:

STUDENT CONDUCT POLICY

**SOPHOMORE ELECTIVE COURSES**

**MCUR 615 Clinical Exposure Program and MCUR 600 Clinical Exposure Program, Part 2**
In this elective, students will be assigned a preceptor in a particular specialty in which they are interested. The student acts as an observer of the activities of the clinical situation in which their preceptor works, whether hospital, clinic, ambulatory or other. This elective provides an experience that focuses on the doctor-patient relationship: how it works, what the physician does to make it work, and what sensitivities must be observed to make for a strong relationship. The preceptor can help students understand the realities of the clinical experience in today's healthcare environment. Students will learn some of the subtleties involved in the doctor-patient relationship as the student observes the day-to-day practice of their preceptor. Students will gain experience interacting with actual patients and their families as well as with other physicians, members of the healthcare team, and the medical office staff.

**MCUR 601 Medical Spanish**
This course is designed for healthcare personnel who want to learn key words and phrases that will help them communicate effectively with Spanish-speaking patients in specific medical situations. Topics covered include: 1) identification of body parts; 2) inquiring about location and types of pain; 3) giving instructions for medications and treatment; 4) making requests of a patient during a physical examination; 5) identifying useful emergency room words and phrases; 6) inquiring about present and past illnesses; and 7) asking key questions about pregnancy. Students will learn the essential grammar needed to communicate in the aforementioned situations. Pertinent cultural behaviors will be addressed. Previous knowledge of Spanish (two years minimum) required. Not recommended for students who are already fluent in Spanish.

**MCUR 602 Bioethics and the Law**
Students will gain understanding of how, and to what extent, the law addresses ethical dilemmas in the healthcare environment by examining specific laws and their applications. Online discussions, in-class sessions and a final exam are components of this elective.

**MCUR 603 Medical Teaching and Leadership Elective**
The CMS Medical Teaching and Leadership Elective is an intense week-long workshop with the goal of improving students’ ability to give effective presentations during their clinical years, as future residents, and as future faculty. The retreat stresses small group sessions and activities to explore seven aspects of adult learning and incorporate these fundamentals into their presentations. During the week, participants will be asked to choose, prepare, and present 2-3 topics to small groups comprised of their M2 and M4 peers. The presentations will be digitally recorded for the purpose of self-evaluation, and each presentation will be followed by feedback sessions moderated by faculty preceptors. The feedback sessions will emphasize the newly introduced fundamentals of adult learning. Two students will be charged with organizing the retreat each year. Participants will have the responsibilities of being present at all sessions and contributing to the learning experiences of their peers. Two participants from a previous year will be given the option to become the student coordinators of future retreats.
MCUR 605 Academic Peer Teaching
This elective will give the peer tutor/teacher the opportunity to help first-year students improve their learning skills. It is intended to provide students with academic assistance from a peer. The tutor will benefit from the experience by gaining a greater conceptual understanding of the material as he or she explains it to others and by learning about methods and principles of education that enhance learning. The student will benefit from the experience of a peer who has done well in the course and can help him or her think about and integrate concepts in a useful way. The peer tutoring process is a powerful strategy for promoting the development of higher-level thinking: peers are less threatening; cognitive development and socialization are similar; and identification with the peer leads to acceptance and imitation of effective learning strategies modeled by the peer tutor.

After the training session, students will either be assigned to work one-on-one or in small group review sessions held at pre-determined times for specific first-year course material. The peer tutor’s primary role will be to engage the student in active inquiry about the subject matter being reviewed. The first session will involve training and discussion about the appropriate facilitation skills, how to effectively communicate the material, when to stop and listen, and how to enhance learning. Additional sessions will involve discussion and preparation of tutoring material and how to maximize its usefulness. Specific skills to be acquired include learning how to ask higher-order questions, teaching group learning skills, and practicing helping behaviors.

MCUR 607 Clinical Experience in a Developing Country
Students will complete at least 90 hours of exposure during the summer to clinical and cultural practices in a developing country. Under the direction of a physician mentor, the student will take and observe histories, exams and medical/surgical practices. The hospital/physician mentor must come from a certified list maintained by the Office of Student Affairs. Students must submit a short summary of their experiences and an evaluation of their program within the first week of the following academic year.

Senior Elective Courses
This elective will provide interested medical students with an opportunity to develop a wide range of knowledge related to clinical ethics, including the use of ethical consultants in clinical practice. This elective is offered entirely online. Students will gain a working knowledge of the most commonly used models of ethics consultation in a range of clinical medicine settings. Students will be able to describe the benefits and/or disadvantages of ethics consultation. Students will gain skills in interpreting ethical problems and ethical aspects of clinical cases.

MCUR 806 Medical Teaching and Leadership Elective
See description under MCUR 603 (Sophomore Elective Courses)

MCUR 805 Academic Peer Teaching
See description under MCUR 605 (Sophomore Elective Courses)

MCUR 808 Clinical Skills Course Elective
Fourth-year students will take a primary teaching role in this course. They will be involved in hands-on clinical
instruction of students, facilitation of small groups, and reviewing clinical experiences with individual students. Specifically, student responsibilities will include meeting with course directors to establish responsibilities and for training for specific sessions; facilitating small group sessions as the lead facilitator or with faculty; and reviewing individual student performance in the OSCE experience and providing feedback to students. Fourth-year students will be assisting student learning in workshops on SOAP note writing, order writing, presentation skills, suturing skills, reading X-rays, and reading EKGs.

Student participation in facilitating small groups, teaching in the clinical workshops, and giving feedback to students regarding their OSCE performance will allow them to meet the learning objectives.

**MCUR 850 ECR Preceptorship**

The senior elective in Essentials of Clinical Reasoning is an opportunity for the fourth-year student to improve upon their history and physical examination skills by teaching the freshman and sophomore students these same skills. The fourth-year student works directly with the ECR course directors and helps plan and execute the course materials. The student will be responsible for a group of 2-4 second-year students and go over patient examinations with them. The student will supervise and teach at the bedside. The students will have access to all teaching aids and CD-ROMs and may get feedback on their own skills. The rotation may include taking on a group of 10-15 freshman students and teaching them, with a preceptor, the basics of physical diagnosis and history taking. The students will also participate at the EEC standardized patient facility in a supervisory fashion. The student may also help coordinate and participate in special programs, such as introduction to the third-year program, social history awareness, and sensitivity training. The student will do literature searches to identify relevance and impact of physical examination on the practice of medicine. The student will also receive training in teaching in small group settings and learn appropriate methods of evaluation. The student will help to prepare teaching cases and the learning issues about them.

**MCUR 851 Proposal for an Independent Senior Elective project**

This elective serves as an “umbrella” for numerous potential projects that students might develop. The completed proposal will be reviewed by the primary faculty member, as well as the Associate Dean for Medical Curriculum, for approval.

**REQUIRED MULTIDISCIPLINARY COURSES**

The faculty has determined that certain subjects are more effectively taught and learned when approached from the body systems or problem-oriented standpoint rather than from the discipline standpoint. Consequently, several required courses have been developed which incorporate these approaches and are included in the curriculum. The courses are developed by faculty assigned to the course by their respective departments and who are specialists in the topics to be taught in these courses. * =Primarily an online course.

**MMTD 510 Introduction to Medical Ethics**

The course introduces the student to the basics of ethical issues in the practice of medicine, as well as to recognize the controversial nature of issues such as patient's rights. Elements of research into the foundations on which positions are taken on medical issues are stressed. Logical approaches for such positions are developed. Inquiry into the historical basis of ethical problems, appreciation for alternative positions on ethical
issues and identifying the ethical issues concomitant with the new developments in the practice of medicine are emphasized. Spring quarter, first year. 2 units.

**MMTD 509 Clinical Epidemiology**
This course acquaints the student with the basic concepts of biostatistics and introductory Clinical Epidemiology. Elements of research design are stressed so that the student is able to critically evaluate research literature. Practice in simple statistical skills and analysis is included. Spring quarter, first year. 2 units.

**MMTD 601 Preventive Medicine**
The course provides a module in epidemiology, introductory lectures in the fields of occupational medicine and environmental medicine plus lectures on a sampling of diseases that are common, constitute public health problems and are amenable to varying degrees to screening, early diagnosis and subsequent intervention. Spring quarter, sophomore year. 2 units.
DEPARTMENT OF ANESTHESIOLOGY

The Department of Anesthesiology offers medical students an introduction to clinical anesthesia. Students learn the management of the airway and evaluate patients for the risk of anesthesia. They also learn about the interaction between patient pathology, medications the patient is receiving and the various anesthetic agents and multitude of drugs that are used in present day anesthesia.

Students assigned to the third-year surgical clerkship at Mount Sinai Hospital Medical Center can spend two (2) weeks in anesthesia as an elective. Students learn about anesthesia by participating in preoperative patient evaluation, administration of anesthesia by participating in preoperative patient evaluation, and administration of anesthesia and duties to observe emergencies, trauma and obstetric anesthesia.

Sophomore Elective Course

MANE 601 Research in Anesthesia
This course will focus on research topics related to anesthesia or pain management. The student will select and propose a research project to the supervising faculty member. The approved research project will be carried out under the guidance of the supervising faculty member. Successful completion of the course will include completion of the proposed project. This course may be extended over multiple quarters.

Senior Elective Course

MANE 801 Anesthesiology
The student spends either two (2) or four (4) weeks working directly with one of the staff anesthesiologists in the operating room or obstetrical suite at Mount Sinai Hospital Medical Center. The student learns hands-on management of the airway and endotracheal intubation of the patient.

Faculty and Associated Staff
Anesthesiologists:
Henri Havdala, MD, Professor Emeritus
Victor Jordan, MD, Clinical Assistant Professor
Mable Kalathiveetil, MD, Instructor
Matilda Koppera, MD, Assistant Professor
Aurea Luzano, MD, Instructor
Venkatgiri Mady, MD, Assistant Professor
Domingo Osunero, Jr., MD, Instructor
Robert Rogers, MD, Lecturer
John E. Vazquez, MD, Associate Professor and Chair
DEPARTMENT OF BIOCHEMISTRY AND MOLECULAR BIOLOGY

The Department of Biochemistry and Molecular Biology participates in the education of medical students in their first year. Required courses offered by the department are Molecular Cell Biology, Medical Biochemistry and Human Genetics. The courses provide medical students with the necessary biochemical and molecular biological background for the study of normal and abnormal physiological processes and encourages the attitudes and skills necessary for the continued integration of molecular information into further formal and informal training.

While maintaining a commitment to teaching excellence, faculty members have very active research programs in the areas of metabolic regulation, enzymology, protein structure, membrane transport proteins, neuroendocrine and neurotrophic proteins, signal transduction, RNA-protein interactions, and membrane protein structural biology. A number of graduate students are integrated into these programs. Opportunities for medical student participation in research are available during the summer quarter and on a part-time basis throughout the school year. Students with strong research interests are encouraged to investigate the Department's combined degree program (MD/PhD) with the Chair. Students enrolled in medical school can also take a leave to pursue research for an MS or PhD degree.

MBCH 502 Molecular Cell Biology
In this course, the molecular and cellular processes common to all eukaryotic cells are studied and, where appropriate, comparisons to prokaryotic cells are made. The molecular and cellular processes of specific cell types and tissue types are also considered, and related to their morphological appearance. A unique aspect of the course is a self-teaching program that covers certain facts and concepts basic to biochemistry; this is an individual, self-learning, self-evaluation program. **Fall quarter. 3 to 5 lecture hours and 1 conference hour per week (5 units).**

MBCH 505 A & B Medical Biochemistry
The fundamental chemical properties and biological reactions of important compounds in the normally functioning human organism are studied. Emphasis is placed on the regulation and integration of metabolic processes. The course makes use of both lectures and conferences. This course utilizes the self-teaching program to provide the students with an initial foundation of knowledge. **Winter and Spring quarters. 3 to 6 lecture hours per week (6 units).**

MBCH 508 Introduction to Clinical Genetics
The course is designed to provide first-year medical students with an understanding of basic genetic principles which are requisite to the practice of modern medicine. Topics discussed include chromosomal abnormalities, pedigree construction, Mendelian inheritance patterns and risk assessment, the role of linkage and restriction fragment length polymorphisms in diagnosis, indications for genetic counseling, and prenatal diagnosis and genetic aspects of cancer. **Spring quarter. 15 hours of lecture and 6 hours of conference (3 units).**

MBCH 616 Crystallization of Membrane Proteins (Research)
This course will teach the student cutting-edge approaches used in the over-expression and crystallization of membrane proteins. These include vapor diffusion approaches, lipid cubic phase methodology, crystal manipulation, and manipulation and monitoring of detergent levels. The student will be actively involved in experimental design, execution, and data analysis. **Fall and Winter quarters. (3 credits).**
Sophomore Elective Courses

**MBCH 623 NGF Mutants (Research)**

This elective provides students the opportunity to participate in each phase of experimental procedures to make mutants. Cloning, DNA sequencing, restriction mapping, plasmid manipulation, transfection, and cell growth are addressed. Students learn some molecular biology and protein chemistry through hands-on working to prepare new NGF mutants. If time is available, determination of the effects of such mutants in biological assays is addressed.

**MBCH 630 Enzyme Structure and Mechanism**

This is a course of lectures and seminars by outside speakers on aspects of enzymology. The following subjects are covered: protein sequence methodology, chemical and enzyme kinetics including regulatory kinetics, enzyme mechanisms, chemical modification of enzymes, and site-directed mutagenesis. **Spring (alternate years). (3 credits).**

**MBCH 631 NGF Signal Transduction**

The student will learn some molecular biology, cell biology, and protein chemistry by hands-on lab work to determine the effects of neurotrophins and their mutants on signal transduction in PC12 or other cells, including P53, NFkB, MAP kinases, etc. Participation in each phase of experimental procedures to study cellular signalling by NGF. Designing and executing experiments, analyzing results, and troubleshooting. Methods — western blotting, enzyme assays, tissue culture. **All quarters. (3 credits).**

---

DEPARTMENT OF CELL BIOLOGY AND ANATOMY

The Department of Cell Biology and Anatomy teaches a substantial portion of the first-year medical school curriculum, including Clinical Anatomy, Histology, Embryology, and part of the Molecular and Cellular Biology course. In addition, the department currently offers two sophomore and two senior electives, where students working in small groups gain advanced instruction from faculty in specialized topics. The department is committed to providing students with a strong education in cell biology. To this end, a wide range of cell biology topics are covered in the various courses taught by the department. The structure and function of cells and their intracellular components are stressed, as are clinical aspects of cell biology.

The anatomically oriented stress the structural organization of the adult human body in relation to its development and function. This structural organization is presented to the students in the form of lectures, audiovisual demonstrations, laboratory participation (dissections and microscopic study) and individual consultation by a faculty committed to excellence in teaching. Clinical lectures are presented by clinical specialists, such as surgeons and radiologists, who stress certain anatomical principles and their relevance to clinical problems.

Required Classes

MCBA 500 A & B Clinical Anatomy
Both gross anatomy and developmental anatomy are studied in this course. Laboratory time is devoted exclusively to the regional dissection of a human cadaver. Supplementary offerings within the course include films, prosected cadavers, and bone sets for individual study. 500-Fall quarter, 3 lectures and 5 laboratory hours per week (5 units). 501-Winter quarter, 4 lectures and 5 laboratory hours per week (6 units). 11 total credit hours.

MCBA 502 A & B Histology
The principal educational goal of this course is to convey the relationship between organ structure and organ function, through the detailed study of light microscopic preparations and electron micrographs of cells, tissues, and organs. Autumn quarter (3 units) and Winter quarter (2 units).

MCBA 504 Embryology
The course presents the normal and abnormal development of the human embryo and fetus. The course includes descriptive presentations of developing structures. Conceptual and mechanistic consideration of developmental processes drawn from non-human embryological events are also discussed (2 units).

Senior Elective Courses

MCBA 802 Dissection-Based Anatomy
This course is designed to enable students pursuing surgical careers to review anatomy in a regional area of their choice. Daily dissection of cadaveric material is required. 4 weeks, March and April only.

Faculty and Associated Staff
Marc Abel, PhD, Associate Professor
Christopher Brandon, PhD, Associate Professor

Karen Diario, MS, Instructor
Miroslav Dundr, PhD, Assistant Professor
William Frost, PhD, Professor and Chair
Nasrin Haghighat, PhD, Instructor
Michelle Hastings, PhD, Assistant Professor
David McCandless, PhD, Professor
Monica Oblinger, PhD, Professor
Michael Sarras, PhD, Professor
Barbara Vertel, PhD, Professor
Hong Kyum Kim, PhD, Assistant Professor
DEPARTMENT OF CELLULAR AND MOLECULAR PHARMACOLOGY

Faculty in this department are dedicated to teaching the basic principles of pharmacology and carrying out research in this discipline. Opportunities for medical student participation in departmental research projects are available during the summer and as research electives in the sophomore year. In addition, the Department offers elective courses covering basic and specialized aspects of cellular and molecular pharmacology.

The Foundations of Medical Pharmacology course seeks to develop an understanding of the basic principles of drug action and how they apply to the treatment of pathophysiologial basis of disease. The course is designed to promote the development of a rational approach to therapeutics, based on sound understanding of basic principles. The faculty reviews the content of courses yearly to update and maintain clinical relevance. The subject matter is organized around drug classes according to their therapeutic effects and mechanisms of action. Clinical conferences and small group work are used to underscore the importance of understanding basic pharmacology and pathophysiology in the treatment of disease. Teaching is carried out by faculty with a firm commitment to medical school education. Faculty members teach and participate in all aspects of the course, including lectures and individual consultation. In addition to elective courses in Pharmacology, specific topics, such as gene expression, analysis of pre-mRNA splicing, neuropharmacology, and principles of drug action & therapeutics, have been developed, as these areas contribute to the advancement of medical sciences.

Department faculty members are engaged in research in the general areas of cellular and molecular pharmacology and molecular biology. Specific areas of research include drug addiction; neurodegeneration & Parkinson's disease; Schizophrenia; the neurobiology of learning, emotion, & behavior; neuronal plasticity, morphology, ultrastructure; synaptic plasticity & integration; basal ganglia structure & function; gene expression; and regulation of alternative splicing.

Sophomore Required Course

MCMP 600 A, B, C Foundations of Medical Pharmacology
The subject matter is covered in lectures, conferences and tutorials. The mechanism of actions of drugs at molecular, cellular and biochemical levels, and factors affecting drug absorption, distribution, metabolism and excretion, are discussed. Pharmacogenetics, gene therapy, drug interactions, therapeutic uses, contraindications and side effects, and the toxicology of selected compounds are also presented. Fall, Winter and Spring quarters (11 units).

Sophomore Elective Courses

GCMP 600 & 601 Neuropharmacology I & II
This course focuses on the pharmacology of neurotransmitters and other active neurochemicals in the brain. Current knowledge and theories of the mechanisms by which major classes of drugs act at the cellular and molecular level to influence the biosynthesis, distribution, storage, uptake, release and metabolism of centrally active neurochemicals. Scholarly publications accompany discussion lessons. Fall and winter quarters (5 units).

MCMP 613 Principles of Drug Action and Therapeutics
Students taking this elective course are expected to gain a comprehensive view of the science of
pharmacology in terms of its basic concepts and principles. We will discuss the general pharmacokinetic and pharmacodynamic principles governing the action of the main classes of drugs; they will include both "defined molecule" agents as well as select representatives of the rapidly expanding area of biologicals. Emphasis will be placed in understanding the relationship between drug dose, host factors, and therapeutic response.

(1 unit)

MCMP 615 Regulation of Gene Expression by Drugs of Abuse (Research)

Drugs of abuse, such as cocaine, cause altered expression of genes in neurons of brain systems that are involved in the generation of motivated behavior. Such changes in gene regulation are part of the neuronal basis for drug addiction and dependence. Our research focuses on the effects of drugs of abuse on gene regulation in the basal ganglia and related forebrain systems. We mainly investigate how psychostimulant drugs affect the expression of genes that encode peptide neurotransmitters, transmitter-related enzymes, receptors, ion channels and transcription factors and how such neuronal changes alter basal ganglia output and behavior. These studies contribute to our understanding of the molecular and cellular changes underlying drug addiction. The offered course is part of this research.

(1 - 3 units)

DEPARTMENT OF EMERGENCY MEDICINE

The Department of Emergency Medicine provides health care of the highest standard at the following, Mount Sinai Hospital, Stroger Hospital. The Department of Emergency Medicine is dedicated to providing a premier learning environment for all medical students and physician assistant students. The Department of Emergency Medicine educates residents in all related training programs including emergency medicine, medicine, surgery, pediatrics, family medicine, and psychiatry. The Department of Emergency Medicine, at two of its sites, engages in a significant amount of clinical-based research. Most of this research resulted in publications in premier journals.

Junior Clerkship

MEMG 702 Emergency Medicine
This is a required four-week rotation during the third year. The student learns the principles of prioritization of potentially life- or limb-threatening conditions and how to approach the acutely ill or injured patient with a focused history and physical exam. Procedures taught within the second year are introduced and performed in the Emergency Department setting with attention to universal precautions and personal safety. A series of lecture/discussion group sessions are conducted by the faculty from Emergency Medicine addressing the major presenting complaints. The student is assigned to either John H. Stroger, Jr., Hospital of Cook County, and Mount Sinai Hospital for the clinical portion. The mandatory departmental orientation takes place at Mt. Sinai. Following the mandatory orientation, students will go to their assigned EM clinical rotation location for a "site-orientation."

Sophomore Elective Courses

MEMG 601 Research In Emergency Medicine - John H. Stroger, Jr. Hospital of Cook County
With the faculty or staff mentor, students will select a topic from the broad areas of clinical or health services research: 1) best practices within the ED: diagnostic test evaluation; biomedical and cost outcomes; patient centered outcomes; e.g., quality of life and patient satisfaction; 2) best practices between the ED and the community: epidemiology; clinical prevention; primary care; EMS; and outreach/follow-up studies; and 3) best practices between the ED and the hospital: ambulatory sensitive conditions, e.g., diabetes, asthma, cellulitis, chest pain, DKA, infectious disease; patient outcomes in observation units, e.g., biomedical, cost, and patient centered; rapid diagnostic and treatment protocols in least restrictive environments.

MEMG 602 Research in Emergency Medicine - Mount Sinai Hospital
With the faculty or staff mentor, students will select a topic from the broad areas of clinical or health services research, such as pain management, psychiatric care, asthma, and violence prevention. The student will complete a self-study curriculum in research design and performance. The student is expected to select, design and collect data for a research project during this 1 – 2 month elective.

Senior Elective Courses

MEMG 824 Emergency Medicine - John H. Stroger, Jr. Hospital of Cook County
The fourth-year student is given the opportunity for increased responsibility in initially independently evaluating patients with urgent or emergent problems. Cases are presented directly to the attending faculty and one-on-one teaching occurs. The experience is divided among the asthma/sickle cell, gynecologic/obstetric, fast track and general acute treatment areas. An emphasis is placed on
acquiring skills in prioritizing, rapid assessment, formulating a working differential diagnosis, cost/quality effective decision making in the work-up, management and disposition of acutely ill and injured patients. The student acquires the ability to manage multiple patients simultaneously during the rotation.

**4 weeks.**

**MEMG 825 Research in Emergency Medicine - Mount Sinai Hospital**
With the faculty or staff mentor, students will select a topic from the broad areas of clinical or health services research, such as pain management, psychiatric care, asthma, and violence prevention. The student will complete a self-study curriculum in research design and performance. The student is expected to select, design and substantially complete a research project during this 1 – 2 month elective.

**MEMG 894 Emergency Medicine - Mount Sinai Hospital**
The student will be scheduled 40 hours to work, weekly, in the Emergency Department. During these hours, the student will see patients under the direct supervision of the attending physician. It is expected that the student will observe and participate in the management of critically ill and injured patients. This elective should be especially valuable for students considering a residency in Emergency Medicine.

**4 Weeks**

DEPARTMENT OF FAMILY AND PREVENTIVE MEDICINE

The Department of Family and Preventive Medicine provides training for medical students throughout their four years at Chicago Medical School.

Required Courses

MMTD 601 Preventive Medicine
Four-hour lecture and home study course. It contains a module in epidemiology, plus introductory lectures and assignments in the fields of occupational medicine and of environmental medicine. Further, there are lectures and assignments on a sampling of diseases which are common, which constitute public health problems and which are amenable to varying degrees to screening, early diagnosis and subsequent intervention. Spring quarter.

MFPM 700 Family Medicine Clerkship
Students learn about and experience family practice in its unique combination of inpatient and outpatient settings; service to all age groups and both genders; attention to both organic and functional aspects of illness; and the interactions among lifestyle, life stresses and disease. Four weeks.

MFPM 803 Sports Medicine Resurrection Hospital Chicago, IL
Course consists of a combination of a Sports Injury Clinic and traditional family practice at Resurrection Family Practice Center, as well as training room clinics at Loyola Academy, New Trier and Niles West High School and North Park University. Additional time may be available at various rehabilitation centers and orthopedic offices in the area. A comprehensive overview of sports medicine is offered under the direct supervision of three family practice physicians who are board certified in sports medicine. The student will be responsible for independent evaluation of athletes in various settings including traditional office settings, high school and collegiate training rooms and athletic events. After evaluating athletes, the student will have an opportunity to discuss differential diagnosis, as well as treatment options, with the supervising attending. The student will also see patients (traditional and sports medicine) in the Resurrection Family Practice Residency Center. This is a Pass/Fail course.

MFPM 810 Family Medicine Preceptorship
The student works full time with a family physician in one of many settings at various sites. This is organized along the lines of the junior clerkship but with a greater effort to have students examine patients independently and form a differential diagnosis. Four weeks. This is a Pass/Fail course.

MFPM 815 Sports Medicine - Advocate Christ Hospital, Oak Lawn, IL
Students will be under the supervision of primary care physicians with a sports medicine interest as well as orthopedic surgeons and trainers. Students will evaluate patients independently and present their differential diagnoses and treatment plans to their supervising physicians. Students will also see patients (traditional family practice and sports medicine) at the Christ Hospital Family Practice Center. There will be one hour per week of formal lecture on sports medicine topics at Christ Hospital.

Clinics at the Christ Hospital Family Practice Center will be a mixture of sports medicine and traditional family practice. Clinics will also be in the Parkview Orthopedics Clinic in Palos Heights and Orland Park, IL, as well as game time and site visits at high schools in Chicago’s south side and southern suburbs.
MFPM 835 Headache Diagnosis and Management
Students will work under the direct supervision of physicians specializing in headache as well as working with ancillary staff for methods of assessment of headache via history and physical examination and in the use of alternative medicine techniques, such as biofeedback for headache management. Students will spend additional time with a clinical pharmacologist to further learn the role of drug therapies in headache management. Satisfactory progression of the student in the program will include demonstration of the ability to assess headache patients and develop treatment plans that will be reviewed and discussed with one of the physicians responsible for the program. The educational program will be conducted primarily at the Diamond Headache Clinic with additional time spent at the Diamond Headache Inpatient Treatment Unit at Columbus Hospital. This is a Pass/Fail course.

MFPM 885 Sports Medicine - Advocate Lutheran General Hospital, Park Ridge, IL
This sports medicine elective introduces the student to concepts important to the health of athletes. Common injuries and their rehabilitation will be emphasized. The student will develop proficiency in the musculoskeletal history and physical. The team approach to sports medicine will be emphasized. Students will become comfortable with the musculoskeletal exam, especially ankle, knee and shoulder. Students will learn the important basic historical questions to ask regarding musculoskeletal injuries and become familiar with medical issues related to exercise. This is a Pass/Fail course.

OFFICE OF MEDICAL CURRICULUM

The Office of Medical Curriculum strives to provide students with an interprofessional learning environment that fosters the development of clinical reasoning and skills that lead to highly competent, collaborative, patient-centered professionals.

First Year Required Course

MCUR 502 A, B & C Essentials of Clinical Reasoning
The first-year Essentials of Clinical Reasoning course is a year-long course that provides clinical training in history taking, physical examination, patient communication and clinical reasoning. The course has an interprofessional focus and includes podiatry and medical students. Multiple teaching methods are used during the course. Students have didactic lectures which focus on introducing skills and applying them to clinical situations. Students practice their skills on each other in workshop settings supervised by faculty. In addition, students have encounters with standardized patients which provide a realistic simulation of an actual patient encounter. The course uses a competency-based grading system which ensures that all students who successfully pass the course have the necessary knowledge and skills to be well prepared for their clerkship experiences. (9 units).

Second Year Required Course

MCUR 602 D, E & F Essentials of Clinical Reasoning
This portion of Essentials of Clinical Reasoning builds on the first-year required course. The students have lectures throughout the year with a focus on history taking and physical examination working toward developing problem lists, differential diagnosis, and understanding the pathophysiology of disease. These lectures are primarily didactic yet are quite interactive. The physical examination and interviewing techniques are reviewed early in the course. The students are evaluated on their head-to-toe physical examination by standardized patient examination. The students are also involved in actual patient examinations, which allow the students to utilize the history and physical examination to develop a data base which serves as the primary source for identification of patient problems. Upon completion of this course, the students should be skilled and efficient in basic techniques of interviewing, history taking, and physical examination. The student is also introduced to the procedures and laboratory techniques that supplement the clinical examination in preparation for the clinical clerkships. During the year, the student will have multiple opportunities to practice oral presentation skills and written documentation of clinical encounters. The course uses a competency-based grading system which ensures that all students who successfully pass the course have the necessary knowledge and skills to be well prepared for their clerkship experiences. (12 units).
DEPARTMENT OF MEDICINE

The Department of Medicine provides students with training in clinical medicine, including physical diagnosis, bedside training in general internal medicine and orientation to the major medical subspecialties. The clinical experiences are complemented by didactic teaching sessions and in-depth reference to current medical literature.

Required Courses

**MMED 700  Medicine Clerkship**

The Junior Medicine Clerkship is conducted at one of CMS's seven affiliated hospitals. This eight week rotation is offered at John H. Stroger, Jr., Hospital of Cook County, Advocate Christ Hospital, Advocate Illinois Masonic Hospital, Advocate Lutheran General Hospital, Mount Sinai Hospital, North Chicago Veterans Affairs Medical Center (NCVAMC) and Norwalk Hospital in Connecticut. There are designated faculty clerkship supervisors and teaching faculty at each institution. The objective of the clerkship is to present the student with a basic core of information in internal medicine. The student is provided with practical experience at the bedside, and formal work and teaching rounds. Techniques of clinical diagnosis and management, including diagnostic and therapeutic medical procedures, are demonstrated and, in appropriate instances, performed by the clinical clerks with faculty guidance.

Subspecialty rounds, clinical conference, clinical-pathological conference and medical grand rounds complement the clerkship experience. Case seminar series provide a core curriculum supplemented by specific assignments, reference to current medical literature and supplementary sources of written and audiovisual instruction.

**MMED 701  Ambulatory Care**

As part of this required junior clerkship, students spend time participating in internal medicine and/or subspecialty clinics for three weeks. Educational sessions are spent at Chicago Medical School covering areas of Journal Club and Rounds. The goal is to become familiar with outpatient internal medicine and learn to function in the office setting. This is a Pass/Fail program. **Three weeks (4.5 units).**

**MMED 800  Medicine Subinternship**

The student Subinternship in Internal Medicine provides an opportunity to serve as an active member of a resident-intern-student team, intimately involved in the acute care of patients on the medical service. The subinternship is conducted at six of the seven CMS's affiliated hospitals. This four week rotation is offered at John H. Stroger, Jr., Hospital of Cook County, Advocate Christ Hospital, Advocate Illinois Masonic Hospital, Advocate Lutheran General Hospital, Mount Sinai Hospital, and Norwalk Hospital. The clinical experience exposes the student to a wide variety of medical problems for which the clerk is responsible for diagnosis and treatment under the direct supervision of the medical resident and attending physician. The full Teaching program includes attending rounds, subspecialty conferences and weekly medical grand rounds. The clerkship is intended to permit the student to serve as an “acting intern” as a means of improving his or her understanding of the pathophysiology of disease, clinical skills, physical and laboratory examinations, and knowledge and judgment in clinical medicine.

**Successful completion of course MMED #700 with a passing grade is requirement for this course**
Senior Elective Courses

Ambulatory Care

MMED892 - Advocate Illinois Masonic Hospital (AIMMC)

MMED881 - Dr. Singla - Private Practice

AIMMC- The student will learn to diagnose and care for acute and chronic medical problems in an ambulatory setting. Students will become familiar with screening guidelines based on a patient's age and gender. Students will begin to implement primary prevention during most patient encounters. They will become familiar with the policies and protocols of managed care. They should be able to perform a MEDLINE search efficiently and apply the information to the practice.

Dr. Singla- The student will be exposed to the common and, at times, the rare endocrine and metabolic disorders through both in-hospital consultations and office practice. Through this clinical exposure, the student will be able to expand upon his/her knowledge of the actions of specific hormones and their role in normal body functions and disease states. The student will develop the ability to perform a complete endocrinologic evaluation and interpret the results of both physical examination and laboratory will be Endocrinology Conferences, Nuclear Medicine- Thyroid Conferences and impromptu didactic sessions for the student to attend.

Cardiology

MMED 813
MMED 814 – John H. Stroger, Jr. Hospital of Cook County
MMED 815 – North Chicago VA Hospital
MMED 864 – Advocate Lutheran General Hospital

The student is involved in all activities under the supervision of attendings, fellows and/or residents. These activities include clinical consultation with the cardiology residents and, when appropriate independently. The case is presented to an attending, and details are reviewed and plans formulated. Students attend rounds in the CCU and participate in the examination and evaluations of care cardiac patients. The students participate in the daily noninvasive testing review sessions with fellows, and/or attendings, and also assist in doing treadmill ECG's. These sessions emphasize clinical correlation.

Cardiology Research

MMED 805 – North Chicago VA Hospital

This course is involves hands-on research experience in a cardiovascular research laboratory. The student will work with investigators under the guidance and supervision of the Principal Investigator and Laboratory Director. The level of responsibility will be determined by the level or prior training of the student and their initiative and interest.

Cardiovascular Testing

MMED 818 – North Chicago VA Hospital

The student will be involved in the workup of patients being admitted to the cardiology service and participate in teaching sessions and all noninvasive cardiac testing (EKG, Holter monitoring, treadmill exercise testing, echocardiogram).

Clinical Nuclear Medicine

MMED 888 – Advocate Lutheran General Hospital

The student will be introduced to the clinical application of Nuclear Medicine in a large community hospital. A wide variety of SPECT, cardiac and physiological studies will be seen. There will be several didactic lectures, as well as conferences. Monthly Nuclear Medicine thyroid- path- endocrine correlation conferences, as well as weekly thallium-cardiolite myocardial perfusion conferences, are held.
In addition, the student will spend one to two full days at a nearby imaging center.

**Clinical Toxicology**

**MMED 891 – John H. Stroger, Jr. Hospital of Cook County**

The student will attend and participate in lectures and conferences given by toxicology fellows and attendings board certified in medical toxicology. The student will participate in clinical inpatient rounds and discuss the management of about 25 patients per week. Some afternoons will be spent at the Illinois Poison Control Center, where the student will respond to routine calls. The student will present a formal lecture at the end of the rotation on a toxicology topic approved by the fellows.

**Dermatology**

**MMED 821 John H. Stroger, Jr. Hospital of Cook County**

**MMED 822 – Dr. Berk – Private Practice**

CCH- The student will work with an attending physician and a faculty member in the Department of Clinical Dermatology.

Dr. Berk- Student should be capable of: Making an objective morphological description of skin ailment, and eliciting an adequate relevant history. Determining, interpreting, and performing supportive or diagnostic laboratory procedures as required. Outlining a treatment plan and evaluating therapeutic response. Knowing which dermatology conditions merit urgent treatment and/or referral. Knowing where pertinent literature is available, and how to use it to better treat the dermatology patient.

**Endocrinology**

**MMED 826 – Mount Sinai Hospital**

**MMED 827 – North Chicago VA Hospital**

**MMED 830 – John H. Stroger, Jr. Hospital of Cook County**

**MMED 865 – Advocate Lutheran General Hospital**

**MMED 825 – Advocate Illinois Masonic Hospital**

The student will examine and follow patients in inpatient and outpatient settings. Through this clinical exposure, the student is able to expand upon their knowledge of the actions of specific hormones and their role in normal body functions and disease states. The student will be responsible for the initial evaluation and follow-up assessment of some of the inpatient consultations. The students will be under the supervision of Endocrinology/Metabolism staff members. Students will take part in clinical conferences, ward rounds and journal club.

**Gastroenterology**

**MMED 832 – North Chicago VA Hospital**

**MMED 833 – John H. Stroger, Jr. Hospital of Cook County**

**MMED 834 – Advocate Illinois Masonic Hospital**

**MMED 863 – Norwalk Hospital**

**MMED 866 – Advocate Lutheran General Hospital**

The student will improve their knowledge and skill in the diagnostic and therapeutic approach to common digestive system diseases. The student may be exposed to diagnostic x-rays, scans, ultrasounds, histopathology of biopsies, laboratory data, and esophageal manometric traces and receive instruction on their interpretation. The student may observe such procedures as upper endoscopy, sigmoidoscopy, colonoscopy, and liver biopsy and are instructed regarding the uses of these procedures and interpretations or evaluation of
results.

Hematology/Oncology

MMED 851 – Mount Sinai Hospital
MMED 868 – Advocate Lutheran General Hospital
MMED 890 – John H. Stroger Jr. Hospital of Cook County
MMED 835 – North Chicago VA Hospital

The student will be exposed to a variety of clinical hematological and oncological problems and is given significant responsibility for diagnostic procedures and management under continuous supervision of the Oncology/Hematology fellows and/or attending physicians. Emphasis is on patient evaluation, appropriate diagnostic studies and treatment.

Infectious Disease

MMED 839 – North Chicago VA Hospital
MMED 840 – Mount Sinai Hospital
MMED 841 – John H. Stroger, Jr. Hospital of Cook County
MMED 870 – Advocate Lutheran General Hospital
MMED 893 – Advocate Illinois Masonic Hospital

The student will comprehend a basic understanding of the common clinical infectious disease syndromes and knowledge of the appropriate use of antibiotics. They will work alongside attending and/or fellow physicians on patients with infectious diseases, many of who are in intensive care units. The student will perform histories and physicals and do daily, as well as reviewing current x-rays, cultures, and microscopic specimens. The student will have daily general medical lectures as well as weekly specialty conferences.

Mature Adult Medicine

MMED 867 – Advocate Lutheran General Hospital

The objective of this rotation is to gain knowledge and skills in the following areas; biology of aging, social and economic issues concerning the elderly in various settings, clinical pharmacology in the aged, the ability to perform a geriatric evaluation and management of depression and dementia, and management of urinary incontinence. Instructional methods include direct patient care, lectures and seminars. Various sites, including the ambulatory office, acute care- general medical unit, geriatric psychiatry, and geriatric rehab wards, and long- term care, will be utilized. The student will see approximately five new patients per week.

Medical Critical Care / Cardiac Critical Care

MMED 816 – Advocate Illinois Masonic Hospital
MMED 817 – Norwalk Hospital
MMED 819 – John H. Stroger, Jr. Hospital of Cook County
MMED 820 – North Chicago VA Hospital
MMED 842 – Swedish Covenant Hospital
MMED 843 – Mount Sinai Hospital
MMED 869 – Advocate Lutheran General Hospital
MMED 869 – 2 – Lutheran Cardiac Care

The student will gain the necessary training and exposure to enable them to organize thinking about complex medical patients. Students will develop comfort in interpreting data and be able to initiate appropriate management. Students will increase their awareness of ethical and family issues commonly seen in ICU and CCU patients. Problems commonly encountered in this elective can be: acute respiratory failure- ventilator management, myocardial infarction, congestive heart failure, cardiac arrhythmias, hypo and hypertension, acute neurological problems (CVA's, drug overdose,
change in mental status), diabetic emergencies such as diabetic ketoacidosis, uncontrolled upper and lower gastrointestinal bleeding and acute renal failure. Student will also perform simple invasive procedures such as arterial line insertion, thoracentesis, paracentesis and lumbar puncture. Student will also attend formal lectures on topics of interest, daily rounds and teaching conferences.

Nephrology

MMED 845 – Mount Sinai Hospital
MMED 846 - North Chicago VA Hospital
MMED 847 – John H. Stroger, Jr. Hospital of Cook County
MMED 871 – Advocate Lutheran General Hospital
MMED 886 – Advocate Illinois Masonic Hospital
MMED 887 – Advocate Christ Hospital

The goal of this elective is to provide a perspective into various aspects of renal pathophysiology including acute and chronic renal failure, glomerular and tubulointerstitial diseases, nephrolithiasis and hypertension, in addition to acid-base, fluid and electrolyte disturbances. The student will work with Nephrology attendings and/or fellows. The student is responsible for patient workup (both inpatient and clinic) and is expected to fully participate in patient management under supervision. Daily floor rounds are made on all patients followed by the service-both consultative and primary.

Palliative Care

MMED 897 – Advocate Lutheran General Hospital

This elective will expose the student to principles of palliative medicine, including pain management and symptom control, as well as to hospice management and clinical care for terminal illness. The student will receive didactic instruction in hospice care and palliative medicine from hospice physicians and staff, as well as direct experiences with the rotation coordinator. Students will also meet with faculty mentors regular didactic sessions and case supervision. The student will develop and refine communication skills with dying persons and their families improve physical examination skills for making prognoses of terminal illness and learn how to work as a member of the hospice/interdisciplinary team. The student will familiarize themselves with the principles of palliative care and the selection of drugs for pain management.

Pulmonary

MMED 855 – North Chicago VA Hospital
MMED 856 – Mount Sinai Hospital
MMED 857 – John H. Stroger, Jr. Hospital of Cook County
MMED 858 – Norwalk Hospital
MMED 872 – Advocate Lutheran General Hospital

The student will be assigned to an attending and/or fellow physician. The student will function as a pulmonary consultant, making the first evaluation of selected patients. Students will review and discuss pulmonary function testing-physiology and pathophysiology of such testing, techniques of such testing and its limitations and implications for patient care. Students will have access to pulmonary function labs, outpatient clinics, and medical intensive care units. Students participate in the management of mechanical ventilation and diagnostic techniques, including endotracheal intubation, fiber optic bronchoscopy and thoracentesis.

Rehab Medicine

MMED 895 – Advocate Lutheran General Hospital

The student will rotate in PM&R with admission and follow-up in-patients on Rehab Unit. A variety of patients, including those with strokes, brain injuries,
amputations, etc. will be seen. There will be an opportunity to be involved in consults, lymph edema clinic, and pain clinic. Student will become familiar with main diagnoses on in-patient rehab unit and gain experience with team conferences and treatment plan. Lectures will be tailored to student's areas of interest.

**Rheumatology**

**MMED 873 – Advocate Lutheran General Hospital**

**MMED 894 - John H. Stroger, Jr. Hospital of Cook County**

This elective emphasizes direct patient contact, extending the lessons learned from patient evaluation into the pathophysiology and treatment of rheumatic diseases. Students function at the level of a house staff member in providing evaluation and care for patients. Inpatient rounds and office hours are made daily with an attending rheumatologist. Unique aspects of the rotations include osteoporosis detection and therapy, arthroscopic surgery, joint irrigation and muscle biopsy techniques. Formal teaching conferences and complement bedside teaching.

DEPARTMENT OF MICROBIOLOGY AND IMMUNOLOGY

Infectious diseases continue to pose the most significant threat to the health of peoples of the world and a substantial threat to the peoples of this nation. To prepare physicians to meet these problems, the Department of Microbiology and Immunology offers a three-quarters-long course in Medical Microbiology and Immunology in the second year of medical school. This provides a foundation for understanding the physiological and pathological processes of microbes, including viruses, bacteria, fungi, and protozoan and metazoan parasites, as well as the host-parasite relationships, including immunologic mechanisms in infectious diseases. Emphasized are the etiology, pathogenesis, epidemiology, prevention and treatment of infectious diseases. Special attention also is given to the immunological principles underlying cellular and humoral immunity, hypersensitivity, autoimmunity, immunodeficiencies and transplantation. These topics are presented to help the student understand the mechanisms by which humans, naturally or with medical assistance, are capable of combating infectious diseases. The training and research interests of the faculty members of the Department of Microbiology and Immunology largely coincide with the topics encompassed in the course. Through this diverse faculty, students are assured of receiving information that is accurate and current from individuals who are knowledgeable and enthusiastic about the content and significance of the material they present. The faculty considers the education of students to be a major responsibility and thrust; therefore, all professors seek to provide efficient and effective means of disseminating information through lectures, case studies in clinical microbiology and immunology, a study guide book including written syllabi of lecture materials, POPS (Patient-Oriented Problem Solving) sessions in immunology and an open-door policy for those requiring help or information. In addition, sophomore and senior elective courses are offered throughout the year in selected areas of microbiology and immunology to students who are interested in a deeper understanding of infectious disease processes and immune mechanisms under guidance of individual faculty.

Required Courses

MMIC 600A, B, C  Medical Microbiology and Immunology
This course focuses on the fundamental molecular biology, genetics, metabolism, immunology and morphology of microorganisms. The first quarter is directed toward principles and concepts of microbiology and immunology; the second and third quarters, to infectious disease processes with an emphasis on clinical presentation, diagnosis, and treatment.
Prerequisites: Cell Biology, Biochemistry, or approval of the department chairman.

MMIC 600A Medical Microbiology and Immunology
Autumn quarter (6 units).

MMIC 600B Medical Microbiology
Winter quarter (6 units).

MMIC 600C Medical Microbiology
Spring quarter (3 units).

Sophomore Elective Courses

MMIC 652 Parasite Immunology (Research)
This course trains students to become familiar with aspects of molecular biology and immunology of medically important parasites with particular reference to leishmaniasis. Emphasis will be placed on the mechanisms of host-parasite interactions in vitro and evasion of host immunity. Prerequisites: MMIC 600A Medical Microbiology and Immunology and Biochemistry. Winter quarter (time to be arranged).
MMIC 653  Biology of Intracellular Parasitism (Research)
This elective familiarizes students with mechanisms and regulation of infection with particular reference to intracellular parasites. The course teaches students to evaluate literature and research reports, plan and conduct laboratory research in molecular parasitology, utilize some biochemical and molecular biology techniques in a research program, and analyze and report lab data in a style consistent with journal publication. Prerequisites: MMIC 600A Medical Microbiology and Immunology, Molecular and Cell Biology, and Biochemistry. **Winter quarter (time to be arranged).**

MMIC 660  Molecular Biology and Immunochemistry of the Immune System (Research)
In this elective, students learn research methodologies, perform experiments, write up results and participate in discussions. Cell culture, isolation of nucleic acids, mapping and manipulating of cloned genes, SDS-PAGE of proteins, radioimmunoassays, and ELISA and flow cytometry are included. Students have actual laboratory research experience in studies in molecular biology of the immune system. **All quarters.** 
**Prerequisite:** Biochemistry and Cell Biology.

MMIC 664  Contemporary Topics in Clinical Immunology
This course covers basic concepts, rationale and principles of clinical immunology assays used in the Clinical Immunology Laboratory for diagnosis and clinical evaluation. Students are expected to be able to describe clinical research as used in the Clinical Immunology Laboratory. **All quarters, two hours per week (2 units).**

Senior Elective Courses

MMIC 802  Molecular Biology and Immunochemistry of the Immune System (Research)
In this elective, students learn research methodologies, perform experiments, write up results and participate in discussions. Cell culture, isolation of nucleic acids, mapping and manipulating of cloned genes, SDS-PAGE of proteins, radioimmunoassays, and ELISA and flow cytometry are included. Students have actual laboratory research experience in studies in molecular biology of the immune system. **All quarters.** 
**Prerequisite:** Biochemistry and Cell Biology. 
**Hours and units to be arranged.**

MMIC 808  Drug Resistance in Leishmania
Students develop research experience in establishing cultures of Leishmania, develop drug resistance and attempt to initially correlate molecular mechanisms of drug resistance. **All quarters (time to be arranged).**

Faculty and Associated Staff
Bala Chandran, PhD, Professor and Chair
Kenneth Beaman, PhD, Professor
Kwang-Poo Chang, PhD, Professor
David Everly, PhD, Assistant Professor
Michael Fennewald, PhD, Associate Professor

Gulam Waris, PhD, Assistant Professor
Chao-lan Yu, PhD, Associate Professor
The Department of Neurology is involved in four years of undergraduate medical education. In the first year, during the correlated Basic Neuroscience course, clinical material is discussed in conjunction with the basic science substrates. In the second year, the Department of Neurology contributes a notable portion of the Clinical Neuroscience course. Additionally, during the second year, as an integral part of the Essentials of Clinical Reasoning course, common neurological symptoms and their causes are presented by departmental faculty.

During the third year of medical school, students spend three weeks on the Neurology Clerkship. The clerkship emphasizes learning to recognize and manage patients with neurologic conditions, demonstration of the ability to perform a complete and reliable neurologic history, neurologic examination, and the achievement of incorporation of competencies that society and the medical school expect of a physician. During the fourth year, students have the opportunity to take electives in outpatient and inpatient neurologic practice settings.

**Required Course**

**MNEU 700 Neurology Clerkship**

This three-week required clerkship prepares students to recognize and begin the management of patients with neurologic conditions, to demonstrate the ability to perform a complete and reliable neurologic history and examination, and to continue their progress toward achieving the School’s educational competencies. The student is provided with practical experience at the bedside, clinics, and teaching rounds, as well as varied learning environments including online quizzes, essay assignments, and simulated patient experiences. On the first day of the clerkship, the students perform a lumbar puncture on mannequin simulators.

The clerkships with a day long orientation and includes an introduction to neuroradiology, neurological disorders review, and a neurologic exam practicum. On the final day of the three week clerkship, students will complete their clerkship by taking the NBME Clinical Neurology Subject Examination (SHELF) to successfully complete their neurology clerkship.

Students in this clerkship receive their clinical instruction at Christ Hospital, Advocate Lutheran General Hospital, Condell Hospital, John H. Stroger, Jr., Hospital of Cook County, Hines Veterans Administration Medical Center, and the North Chicago Veterans Affairs Medical Center. Students interact with patients with a wide variety of neurological conditions on both outpatient and inpatient services under the preceptorship of neurology attendings and residents.

Students’ participation in small and large group discussions, didactic presentations, workshops, and conferences is required, facilitated, and supervised by preceptors at specific training sites. These activities ensure continued learning and application of the principles and practice of neuroscience and clinical neurology, and ensure that students’ learning experience in neurology is an integral contribution to progress in becoming competent physicians.

**Senior Electives**

**MNEU 801 Advanced Clinical Neurology**

Clinical neurology is an elective course for students desiring experience in neurology beyond that received during the required core clerkship. Students attend clinics three mornings each week, examining patients and discussing the findings and treatment plan with supervising faculty. The remaining
mornings will be spent in the neurophysiology laboratory, where students will participate in the performance of electroencephalography, electromyography, and other electrodiagnostic studies. The student seeking additional clinical experience may spend the afternoons in rounds with the patient care services. Students seeking research experience may spend the afternoons on a project of limited scope that is agreed upon in discussion with the Chair. A written summary of the project is required at the end of the course. The student is expected to attend division conferences. John H. Stroger, Jr., Hospital of Cook County.

MNEU 803 Clinical Neurology Preceptorship
Clinical neurology is a fourth-year course in which the medical student expands upon earlier training in the required clerkship in the diagnosis and management of patients with neurologic disease. The student presents to the preceptoring neurologist those patients “worked up” in both an inpatient and outpatient setting. In addition, the student sees selected consultations that are presented to the preceptoring neurologist for discussion. Opportunities are afforded the student to participate in various neurologic diagnostic studies, including electroencephalography, electromyography, nerve conduction, and evoked response neurophysiology. The importance of these diagnostic studies in the neurologic diagnosis is emphasized. Highland Park/Edgewater Hospitals.

MNEU 805 Clinical Neurology Preceptorship
Clinical neurology is a fourth-year course in which the medical student expands upon earlier training in the required clerkship in the diagnosis and management of patients with neurologic disease. The student presents to the preceptoring neurologist those patients “worked up” in both an inpatient and outpatient setting. In addition, the student sees selected consultations that are presented to the preceptoring neurologist for discussion. Opportunities are afforded the student to participate in various neurologic diagnostic studies, including electroencephalography, electromyography, nerve conduction, and evoked response neurophysiology. The importance of these diagnostic studies in the neurologic diagnosis is emphasized. Condell Medical Center.

MNEU 805 Neurology, Clinical Preceptorship
This is an elective course for students desiring to become comfortable taking a neurologic history and examination, and familiar with the management of common neurologic problems, beyond the level achieved during the required core clerkship. Students see and perform histories and physicals, research relevant literature, present to attending and complete discharge summaries on all hospital and ER neurology consults. Students also attend neurology rounds every morning, neurology clinic once a week and seizure clinic once a week. Additional instruction is achieved by reading assigned handouts and watching assigned videotapes. Norwalk Hospital.

DEPARTMENT OF NEUROSCIENCE

The mission of the Department of Neuroscience is to conduct high-quality research and scholarship, and to educate medical and graduate students about the molecular, cellular, anatomical, and clinical aspects of central nervous system function. Medical students are introduced to these concepts in the Medical Neuroscience Course (MNSC501), taken during the Spring Quarter of their first year.

Primary research interests of the faculty in the Department of Neuroscience include:

- Neuronal plasticity involved in drug addiction
- Roles of dopamine and glutamate in animal models of Parkinson's and Huntington's diseases
- Electrophysiological and neurochemical studies of the basal ganglia and the pathogenesis of schizophrenia
- Cellular and molecular analysis of Alzheimer's disease pathogenesis
- Factors regulating neurogenesis, neural differentiation, neuronal survival and therapeutic gene delivery, from development through senescence.

Opportunities for medical students to participate in these departmental research programs are available during the summer of the freshman and sophomore years.

REQUIRED COURSE

MNSC 501 Medical Neuroscience
An interdisciplinary introduction to the structure and function of the nervous system team-taught by all faculty members in the Department of Neuroscience, plus several guest clinicians. This course provides a broad overview of modern neuroscience, emphasizing: 1) cellular and molecular neuroscience, including transmitter neurochemistry, neural plasticity, and the biology of neural stem cells; 2) systems neuroscience, focusing on sensory, motor, limbic and higher cognitive systems; 3) neuroanatomy taught in small-group sessions utilizing human cadaver brains and interactive computer-based learning; and 4) clinical neuroscience, including correlations on CNS infections, multiple sclerosis, peripheral neuropathy, Parkinson's and Huntington's diseases, disorder of muscle, stroke, brainstem lesions, seizure disorders, sleep disorders, loss of consciousness, schizophrenia, affective disorders, and Alzheimer's disease.

Prerequisites: Mammalian Physiology. Spring quarter, 8 hours per week (7 units).

Sophomore Elective

MNSC 603 Research in Neuroscience
The Department of Neuroscience offers student research training opportunities in a number of disciplines, to be arranged by the faculty advisors.

Multidisciplinary Courses

GNSC 505 Brain Dissection
An intensive short course, where students will carry out a detailed dissection of a human cadaver brain. This dissection will expose them to all the major areas of the human forebrain, brainstem, and cerebellum, including major fiber tracts, subcortical nuclei, and their connections to brainstem and cortical structures. Special emphasis will be placed on human limbic structures and the circuitry underlying emotion, addiction, and other psychiatric disorders. Fall quarter, 1 credit.

Robert Marr, PhD, Assistant Professor
DEPARTMENT OF OBSTETRICS AND GYNECOLOGY

The Department of Obstetrics and Gynecology is a field of clinical medicine providing primary and secondary health care for women. The Department of Obstetrics and Gynecology at Rosalind Franklin University of Medicine and Science provides didactic and clinical teaching for students and residents with direct exposure to patients and hands-on experience. Students are provided a core of information and taught clinical skills pertinent to the female reproductive system. Subspecialty exposure within the fields of obstetrics and gynecology is also provided in organized fashion.

Affiliation with Mount Sinai Hospital Medical Center of Chicago as the primary site of student education has provided educational and clinical dimensions to the Department of Obstetrics and Gynecology. Mount Sinai, John H. Stroger, Jr., Hospital of Cook County and Lutheran General Hospital, with their large active Obstetrics and Gynecology services, can offer broad, in-depth clinical training for both students and residents.

There is ongoing research by faculty members in a number of fields in the discipline, including applications of ultrasonography, gynecologic oncology, reproductive endocrinology, urogynecology, and maternal-fetal medicine.

REQUIRED COURSE

MOBG 700 Obstetrics/Gynecology Clerkship
This six-week required clerkship at John H. Stroger, Jr., Hospital of Cook County, Mount Sinai Hospital and Lutheran General Hospital provides the student with experience in all aspects of obstetrics and gynecology. This includes general obstetrics and gynecology and the subspecialties of endocrinology, oncology and perinatology.

Students are assigned to resident teams in each area and are expected to function as members of those teams. In addition to the department's regular conference schedule and rounds, there are specific didactic sessions for students. These sessions include a daily lecture series covering the core curriculum. Student/faculty interaction is enhanced through small preceptor group meetings.

Senior Elective Courses

MOGB 810 Student Internship in Obstetrics and Gynecology
The rotation provides in-depth clinical exposure for the fourth-year medical student. Students have the opportunity to act as the primary physician for patients under the close supervision of the senior resident and attending physician. The student may choose to rotate on either the gynecology service, the complicated obstetrics service, or the labor and delivery ward.

MOBG 820 Urogynecology
This elective offers an introduction to diagnosis and treatment of incontinence and pelvic organ prolapse. The student will be involved in the office evaluation of patients and participate in surgical procedures. Observation of urodynamic testing is also included.

MOBG 830 Urogynecology
This course will emphasize the importance of properly recognizing, understanding, and treating patients with urogenital defects leading to urinary incontinence. The normal female urogenital anatomy, physiology, pharmacology, and pathology will be reviewed and explained. Causes leading to incontinence will be identified.

Methods to establish a proper diagnosis among the
several forms of urinary incontinence will be introduced and demonstrated on patients requiring the evaluations.

Finally, physiological, pharmacological, and surgical methods and treatment options will be discussed and, if possible, demonstrated.

**MOBG 840 Maternal - Fetal Medicine**
The senior elective in Maternal-Fetal Medicine should be at least four weeks for optimal benefit. In the inpatient area, the student will follow cases of antepartum patients with pregnancy complications with the supervision of a senior resident and perinatologist. There are daily teaching rounds on these patients. The student will also be involved with delivery of high-risk patients. In the outpatient perinatal center, the student will be able to work with a senior resident and attending. They will be exposed to ultrasound studies, NST and outpatient management of high-risk conditions (diabetes, hypertension, congenital anomalies, etc.).

**MOBG 850 Gynecologic Oncology**
This is a senior elective that focuses on the diagnosis, treatment and follow-up of gynecologic malignancies. Participation in surgery is required. Experience in benign breast disease is included.

**MOBG 870 Obstetrics and Gynecology Research**
This elective is part of a clinical research study to examine the incidence of premenstrual syndrome (PMS) among the population of John H. Stroger, Jr., Hospital of Cook County. Despite the large amount of research in the area of PMS, there have been no studies to date looking at the racial mix in this population (primarily African American, lower socioeconomic group) of women. Phase Two examines the association between PMS and domestic violence. Students will be in clinics Monday through Friday, 9:00 a.m. to 5:00 p.m., seeing patients and collecting questionnaires. In addition, the student will attend evening clinics as necessary. Data entry will be done daily. Finally, the student will be responsible for completing a written incidence report on study findings and initiating Phase Two of the study.

Daniel Wu, MD, Clinical Assistant Professor
The Department of Ophthalmology provides to medical students the skills that are needed by all physicians in order to evaluate the eye and visual system. Through a series of didactic sessions, students are taught to measure and record visual acuity, detect abnormal pupillary responses, characterize ocular deviations (strabismus) and abnormal eye movements, detect abnormalities of the optic disc and posterior pole by direct ophthalmoscopy, and how and when to initiate management and/or physician referral for ocular and visual system abnormalities.

As part of the Essentials in Clinical Reasoning program, first second year students may elect to have a half-day experience in clinical ophthalmology under the supervision of Dr. Troy Close at the North Chicago Veterans Hospital.

Junior students taking their surgical clerkship at John H. Stroger, Jr., Hospital of Cook County or Mount Sinai Hospital may take a two-week elective in clinical ophthalmology at John H. Stroger, Jr., Hospital of Cook County. Senior students may take a two-week elective in clinical ophthalmology. Both junior and senior electives are centered in the eye clinic at John H. Stroger, Jr., Hospital of Cook County and afford students the opportunity to examine patients and formulate differential diagnoses and treatment plans under the supervision of an ophthalmology resident or attending ophthalmologist.

MOPH 805 Clinical Ophthalmology
Students will be working with John H. Stroger, Jr., Hospital of Cook County Ophthalmology housestaff under the direction of Drs. Axelrod, Becker, Dray, Dwarakanathan and Whelchel. Students will examine and evaluate patients in the Eye Clinic. Students may write their findings in the chart. Only residents and attendings will have “sign-off” authority for disposition. Students will be expected to attend regular lectures and conferences and may be asked to give a brief (20 minute) presentation on a clinical topic.

Students may elect to spend an additional four weeks doing a “mini” research project.

Joan Whelchel, MD, Lecturer
DEPARTMENT OF PATHOLOGY

The Department of Pathology provides instruction to medical students in a sophomore-level course required of all students, as well as in a set of elective course offerings. Participation in research is also available.

The required course is an introduction to the "study of disease." The course is based on, and integrated with, the preceding and concurrent basic science presentations of other departments, and serves as a bridge to the clinical disciplines that follow. Disease processes are initially viewed as manifestations of a common set of mechanisms of injury, thus providing a basic foundation for the course. This is followed by a survey of the principal disorders of each organ system. The course is conducted as a three quarter lecture and practicum set of exercises. A hospital-based honors option is available to selected students during the second and third quarters.

Senior elective clerkships are offered in anatomic pathology, laboratory medicine, and forensic pathology. Clerkships are conducted at Mount Sinai Hospital Medical Center and at the office of the Medical Examiner of Cook County.

Graduate programs leading to the MS and PhD degrees, as well as the MS/MD programs are currently in abeyance.

SOPHOMORE REQUIRED COURSES

MPAT 600A  General and Systemic Pathology
The biologic bases and mechanisms of disease, including inflammation and repair, and cell injury by infectious, immunologic, vascular, genetic, physical, chemical, and neoplastic mechanisms, followed by a beginning survey of disease with emphasis on clinical pathologic correlations. Fall quarter. Five lecture hours and two practical session hours per week (7 units).

MPAT 600B  Systemic Pathology
Continuation of the survey of human disease. Winter quarter. Five lecture hours and two practical session hours per week (6 units).

MPAT 600C  Systemic Pathology
Completion of the survey of human diseases. Spring quarter. Five lecture hours and two practical session hours per week (6 units).

Sophomore Elective Courses

MPAT 622  Special Projects in Pathology
Students participate in a research project or other individualized program under the direction of a faculty member. Prerequisite: Consent of department chair. Hours and credit to be arranged.

MPAT 630  Pathology Literature Review
The student prepares a formal paper based on library research or on a laboratory or clinical research project conducted by the student. Credit for this course depends on both acceptance of the written paper and an oral presentation to the department. Fall, Winter and Spring quarters (3 units).

MPAT 631  Advanced Hematology
This elective is an in-depth consideration of diseases of the hematopoietic and lymphoid systems and of hemorrhagic disorders, with considerable emphasis on etiology, pathogenesis and clinical diagnostic
approaches. The subjects covered are elaborations of topics previously introduced during the sophomore pathology course for medical students. Spring quarter, three hours lecture and discussion per week (3 units).

Senior Elective Courses

MPAT 800 Pathology Clerkship
Hospital clerkship experiences taken in four-week modules may be devoted to autopsy pathology, surgical pathology, ultrastructural studies, clinical chemistry, or clinical diagnostic microbiology. Clerkships are individually arranged in order to accommodate a broad range of student interests. **Prerequisites:** MPAT 600A, B, C.

MPAT 835 Forensic Pathology Clerkship
The student is assigned to the Cook County Medical Examiner's Office for a period of four weeks, during which he or she participates in medicolegal autopsies. Students may also participate in toxicologic studies and “crime lab” activities if they choose. Research experiences are also available. **Prerequisites:** MPAT 600 A, B, C.

DEPARTMENT OF PEDIATRICS

The Department conducts a six-week required clerkship in the junior year, participates in teaching newborn history and physical, nutrition and certain other subjects in the first two years of medical school, and offers senior electives in such subjects as Adolescent Medicine, Child Abuse & Neglect, Ambulatory Pediatrics, Genetics, Neurology and Hematology/Oncology.

The Department of Pediatrics is dedicated to presenting the practice of pediatrics in a caring, empathic manner, thus providing a role model for future physicians. The pediatric junior clerkship is designed and implemented in such a manner as to facilitate each student's learning of the principles of pediatric medicine and how those principles relate to individuals from birth to the end of adolescence. Emphasis is placed upon patient care at all stages of the clerkship.

Students engaged in the Junior Year Pediatric Clerkship at CMS find that close, personal interaction between faculty, staff and students is encouraged and nurtured. Faculty members are available for individual instruction and performance evaluation. CMS students are able to interact with a wide range of clinical patients as a result of the diverse clinical facilities used for teaching purposes.

REQUIRED COURSE

MPED 700  Pediatrics Clerkship
This clerkship emphasizes close faculty supervision by full-time CMS faculty as well as full-time attending staff physicians from the clerkship site hospital. This includes personal attention to the elicitation of histories, performance of physicals, patient write-ups, chart notes and invasive and noninvasive technical procedures. Students are assigned to a service at one of the hospitals and serve as full-functioning members of the healthcare team composed of junior and senior residents and attending staff physicians.

The clerkship is currently conducted at Christ Children’s Hospital, Cook County Children’s Hospital, Mount Sinai Hospital Medical Center, Lutheran General Children’s Hospital and St. Anthony Hospital. Students rotate through ambulatory and inpatient pediatric units, neonatology and the emergency room. Didactic teaching is presented in the form of lectures, seminars, individual presentations, ward rounds and student bedside rounds.

Senior Elective Courses

MPED 803  Ambulatory Pediatrics
The four-week rotation in Ambulatory Pediatrics is centered at the pediatric clinic in the Yacktman Pavilion of Lutheran General Children’s Hospital. The student will have the opportunity to see patients from infancy through adolescence under the supervision of precepting hospital-based pediatricians. Patients present with a broad range of acute and chronic pediatric problems, as well as for health maintenance and preventive medicine visits. Additional time can be spent visiting various multidisciplinary clinics, as interest allows, in order to better understand the role of various members of the healthcare team. One morning per week will be spent at the Lutheran General Children's Day Care Center, where the student will have an opportunity to see the developmental patterns of healthy children as well as to explore the mechanisms for disease transmission in group care settings. Appropriate readings will be assigned from the recent pediatric literature and attendance at the various noontime departmental conferences is recommended.
MPED 805 Pediatric Subinternship
The Pediatric Subinternship provides the senior medical student an opportunity to function, with supervision, as the primary caretaker of inpatients on pediatric and adolescent units. During the rotation, the student will be expected to improve clinical skills by performing history and physical examinations, developing problem lists of differential diagnoses, forming final physiological assessments, and outlining appropriate diagnostic and therapeutic plans. The student is expected to function in much the same manner as a first-year pediatric resident. The student will write daily notes and orders, which will be countersigned by the supervising residents. The student will have the opportunity to perform routine diagnostic procedures on assigned patients. The student will be expected to share night-call under the supervision of the residents every fourth night. The student will also be expected to participate in morning report, sign-out rounds, attending rounds and other teaching conferences. The student is expected to read about each patient's disorder, thereby improving medical knowledge and contributing positively to the patient's care. The student will learn an appreciation for a multidisciplinary approach to the patient with complex and chronic medical conditions, and work hand-in-hand with therapists and other paramedical personnel in planning extended care needs for these patients. The student will be involved in the important issue of acute and chronic pain management of the hospitalized child. The student will gain experience in serving as a member of an inpatient care team.

MPED 808 Emergency Care
Students will be working with attending physicians and residents in the emergency room at John H. Stroger, Jr., Hospital of Cook County. The team of ER and clinic staff also consists of nurses, nurse practitioners and other support staff. Students will be given gradually increasing responsibilities of evaluating, assessing and planning management strategies under supervision and guidance of attending physicians and residents.

MPED 812 Genetics
Students selecting this elective at Cook County Children's Hospital are expected to become familiar with the principles of human genetics (the cell cycle, mechanisms of chromosomal abnormalities, fundamentals of enzyme chemistry and principles of Mendelian and multifactorial inheritance). Clinical genetic disorders, such as autosomal and sex chromosomal abnormalities and inborn errors of amino acid, sugar mucopolysaccharide, carbohydrate and lipid metabolism, are covered.

Basic laboratory techniques, including karyotyping, tissue cultures and quantitative chemistry, are presented along with the principles of genetic counseling. All quarters, one student at a time, four to eight weeks except by special arrangements, 40 hours per week. 

Prerequisite: MPED 700.

MPED 814 Pediatric Hematology/Oncology
This elective offers the student the opportunity to elicit histories and perform physicals on patients with oncologic and hematologic problems and to follow through with the appropriate laboratory investigations. Both inpatient and outpatient facilities at Cook County Children's Hospital are available for this experience.

The course covers exposure to pediatric hematologic problems and malignancies. Emphasis is placed on the development of insight into the general management of and respect for the general needs of the patient and family. All quarters, one student at a time, four to eight weeks except by special arrangement. 

Prerequisite: MPED 700.

MPED 816 Ambulatory Pediatrics
This elective provides students with exposure to a wide range of problems encountered in the delivery
of medical care to children in an ambulatory setting. The student is assigned to pediatric acute care and emergency services where crisis-oriented care is provided. Assignment to a selected pediatric subspecialty is also available.

The elective provides experience at John H. Stroger, Jr., Hospital of Cook County in obtaining an accurate, complete pediatric history, as well as in securing physical examination data. All quarters, one or two students maximum, four to six weeks. **Prerequisite:** MPED 700, and approval of Ambulatory Pediatric chair.

**MPED 818 Child Abuse and Neglect**
This elective is designed for students with an interest in child advocacy who are planning a career in pediatrics, family practice, pediatrics/medicine or emergency medicine. Students will have the unique opportunity to spend four weeks working with the Division of Child Protective Services at Cook County Children's Hospital. Child Protective Services provides coordinated multidisciplinary evaluations to children presenting to John H. Stroger, Jr., Hospital of Cook County who are suspected of being abused and/or neglected.

Students doing this elective will work one-on-one with the attending physicians in the division and will actively participate in the work-up, management and follow-up care of children suspected of being mistreated, and can expect to learn medical aspects of physical abuse, sexual abuse and neglect (including failure to thrive). In addition to participating in the medical work-up, the student will have the opportunity to observe and participate in the developmental evaluations of patients and in the psychosocial evaluations of patients and their families. The students will also attend and provide care in the weekly comprehensive follow-up clinic for abused and neglected children. The student will learn about the role of the physician as advocate for the child within the Child Welfare and legal systems and will learn about the physician's role in coordinating multidisciplinary care for high-risk patients and their families.

**MPED 820 Adolescent Medicine**
This elective will provide students the opportunity to work with adolescents and young adults aged 13 to 25 years in a variety of clinical settings using a multidisciplinary approach to care. The student will work directly with attending physicians, psychologists, social workers, mid-level practitioners, an adolescent medicine fellow and residents. All patient encounters will be conducted under the supervision of an attending physician.

Lecture topics include Pubertal Growth and Development, Menstrual Disorders, Issues of Sexuality (Adolescent Pregnancy, Sexually Transmissible Infections and Contraception), Chronic Illness and the Sports Pre-participation Exam.

Residents in Adolescent Medicine are required to conduct a research project during their rotation. Students will have the option to join the resident(s) in their project or develop their own. The projects are supervised by the Divisional attending staff and a formal presentation of the project is held on the last day of the rotation.

**MPED 836 Pediatric Endocrinology**
This elective will introduce the student to the endocrinology of infants, children and adolescents. The application of basic endocrine physiology in the diagnosis and treatment of these disorders will be emphasized. There will also be exposure to comprehensive diabetes management. Highly outpatient oriented.

**MPED 837 Pediatric Gastroenterology/Nutrition/Hepatology**
This elective will familiarize the student with the evaluation, diagnosis, and treatment of pediatric gastrointestinal, hepatic, and nutritional disorders.
Special emphasis will be placed on methodology of history taking, problem list formation, use of laboratory investigations, and interpretation of radiographs. Adequate exposure to GI procedures will be provided.

**MPED 838 Pediatric Hematology/Oncology**

Intensive multidisciplinary clinical/clinical research elective in pediatric hematology-oncology that will involve students in daily inpatient rounds and ongoing care, conferences, outpatient clinic sessions, and inpatient consultations. Students will have the opportunity to follow patients in-depth, be involved in procedures and be exposed to peripheral blood and bone marrow morphology in-depth, and be exposed to ongoing clinical research in pediatric hematology-oncology. There are regular didactic teaching conferences covering a broad spectrum of pediatric hematology-oncology topics. The students are required to review textbook and pertinent review journal articles in pediatric hematology-oncology.

**MPED 840 Clinical Genetics**

This is a busy clinical consultation service with emphasis on prenatal diagnosis, genetic counseling, and dysmorphology and heritable metabolic disease evaluations. The student will also attend multidisciplinary clinics for children with handicapping conditions and craniofacial anomalies, prepare karyotypes in the Cytogenetics Laboratory and present at least one short report at weekly Journal Club sessions.

**MPED 841 Pediatric Infectious Disease**

The student on service evaluates approximately seven new inpatients and five new outpatients per week, in addition to assessing hospitalized patients once daily on rounds. Rounds are always with the attending who has a minimum of four hours daily contact with the student. Outpatient clinic is held three half-days per week. The student is expected to spend a minimum of two hours daily reading and researching cases in the library or using the attending physicians personal library.

**MPED 842 Pediatric Critical Care**

The PICU is the nucleus of a certified Level-1 pediatric trauma center, the Midwest Pediatric Brain Tumor Center, and a congenital cardiac surgical program. Our patients are very high acuity, ranging in age from 1 day to 19 years, and usually requiring sophisticated monitoring and interventions. We care for children with multisystem trauma, severe traumatic brain injury, seizures, respiratory failure, congenital heart disease and cardiac failure, cancer, septic shock and other overwhelming infections, renal failure, and more. As part of the PICU team, the student will gain experience with invasive hemodynamic monitoring, resuscitation and management of shock, conventional and high-frequency mechanical ventilation, the use of nitric oxide for pulmonary hypertension, renal replacement therapies, intracranial pressure monitoring and management, extracorporeal membrane oxygenation, procedural sedation, and care of the postoperative cardiac patient. The majority of teaching, which is substantial, happens at the bedside. The PICU is staffed by two second-year pediatric residents and a pediatric critical care fellow, and supervised by four full-time pediatric intensivists with additional expertise in neonatology, cardiac intensive care, pulmonology, and complementary medicine. The PICU also has an established pediatric critical care medicine fellowship program and a pediatric critical care transport team.

**MPED 843 Pediatric Nephrology**

The student will participate in the evaluation and management of inpatient consultations and outpatient visits to the Pediatric Nephrology service. Typical problems include electrolyte abnormalities, hypertension, nephrotic syndrome, enuresis, urinary tract infection and acute renal failure.

**MPED 844 Pediatric Cardiology**

The major goal of this elective is to help the student
develop problem-solving skills in pediatric cardiology, based on clinical pathologic and physiologic principles. The student will actively participate in daily care of inpatients (ward, ICUs, pre/post-op, consultations) and outpatients; interpretation of exercise testing and cardiac catheterization; review of pathology specimens; and formal teaching sessions (didactic and Socratic). Detailed goals, objectives and scheduled activities are available upon request.

MPED 845 Neonatology
This program, a rotation through the NICU at Lutheran General Children's Hospital, is intended to acquaint the student with the current management of the high-risk newborn during the immediate perinatal period, including the delivery room and the Neonatal ICU. This is a clinical experience, which will expose the student to the diagnosis and management of a broad spectrum of neonatal disorders.

MPED 847 Pediatric Pulmonology/Cystic Fibrosis
This elective will provide the student with an understanding of the pathophysiology, differential diagnosis, management and prognosis of acute and chronic respiratory disorders in infants, children and adolescents. This includes the appropriateness and risks of various diagnostic and therapeutic procedures, interpretation of test results, and assessment of response to therapy. The student will spend time in the pediatric pulmonary function lab, radiology, and may observe other laboratory tests or procedures such as bronchoscopy. Daily teaching rounds are held in the pediatric and adolescent units. The student will be expected to evaluate all new consultations first, then present to the attending physician for discussion and management. The student will attend outpatient pulmonology clinics three times a week and the cystic fibrosis center clinic once a week, where a multidisciplinary team participates in the care of a large cystic fibrosis population. A brief oral presentation will be expected at the end of this rotation.

MPED 848 Neonatology
The division of neonatology at John H. Stroger, Jr., Hospital of Cook County, a Level 3 tertiary care facility, is responsible for the NICU, normal nursery, newborn resuscitations, the high-risk infant follow-up program, and early intervention programs. Newborn infants with a wide spectrum of problems are admitted to the unit from the nurseries in the hospital and from several Level 2 hospitals in the community. The student will spend four weeks in the NICU; a week-long rotation through the normal nursery can be arranged if requested by the student. The student will be assigned to work with one of the senior pediatric residents rotating through the Unit. Approximately two to three patients will be assigned to the care of the student after orientation is completed. The student and resident will work under the close supervision of a fellow and an attending neonatologist.

MPED 849 Pediatric Neurology
Senior medical students may spend a one-month elective on the pediatric neurology service. The curriculum for the pediatric neurology elective includes such topics as epilepsy, cerebral palsy, developmental disorders, learning disabilities, attention deficit disorder, infectious diseases of the central nervous system, and neuromuscular disorders.

MPED 852 Inpatient Pediatric Subinternship
This elective will allow the student to function, with supervision, as the primary caretaker of inpatients on the general pediatric service. The student is expected to be the primary coordinator of care for the patients assigned. The student will write daily notes and orders that will be countersigned by the supervising residents. The student will have the opportunity to perform routine ward procedures, such as venipuncture, insertion of intravenous catheters, and lumbar puncture. The student will be expected to
participate in morning report, sign-out rounds, attending rounds, and other teaching conferences as scheduled. The student is expected to read about each patient's disorder, thereby improving medical knowledge and data base.

**MPED 854 Pediatric Critical Care**
The PICU provides definitive intensive therapy and maximum surveillance for the critically ill or injured child. It is supervised by full-time pediatric intensivists who act as consultants to all of the patients and as teachers to the house staff.

**MPED 855 Pediatric Radiology (Available on a limited basis)**
The Pediatric Radiology elective takes place in the Pediatric Radiology section of the Yacktman Children's Pavilion, Lutheran General Children's Hospital. At this site, there are dedicated facilities to provide pediatric fluoroscopy, routine radiography, ultrasound and CT. MR examinations are readily available through the main department. Nuclear medicine is performed in the separate department of nuclear medicine. In addition to the student's rotation through the Pediatric Radiology section, time is provided to rotate through the other imaging areas. The student has a close relationship with faculty on a day-to-day basis with one-to-one teaching in the mornings as studies are read or performed. Afternoon time is left for students to review extensive teaching file material consisting of CD-ROM, videodisc, videotape and slide tape programs. A core curriculum is established using these teaching aids. Afternoons are also utilized for the student to complete an assigned project required for the completion of the rotation. While doing the Pediatric Radiology elective, students are encouraged to attend other pediatric teaching conferences, as well as conferences given or supported by the Department of Radiology.

**MPED 856 Clinical Pediatrics**
This clerkship is designed to provide a broad-based experience in primary care pediatrics with an emphasis on comprehensive healthcare planning, preventive medicine, and continuity of care. This program will be based at offices in Deerfield and Libertyville, Illinois. The student will see primary care patients individually with attending supervision. Students are expected to participate in didactic lectures 1–2 hours per week.

**MPED 857 Pediatric Pulmonology**
During this rotation, the medical student will follow patients, both outpatient and inpatient. The student will become familiar with various procedures, including surgical and office procedures. The student will develop a working knowledge of the specifics of pulmonary medicine involving children.

**MPED 858 Pediatrics Hematology/Oncology**
During this rotation, the medical student will follow patients, both outpatient and inpatient. The student will become familiar with various procedures, including surgical and office procedures. The student will develop a working knowledge of the specifics of hematology and oncology involving children.

**MPED 859 Pediatric Development**
During this rotation, the medical student will follow patients, both outpatient and inpatient. The student will become familiar with various procedures, including surgical and office procedures. The student will develop a working knowledge of the specifics of developmental issues involving children.

**MPED 860 Pediatric Gastroenterology**
During this rotation, the medical student will follow patients, both outpatient and inpatient. The student will become familiar with various procedures, including surgical and office procedures. The student will develop a working knowledge of the specifics of GI and nutrition involving children.

**MPED 861 Pediatric Endocrinology**
During this rotation, the medical student will follow
patients, both outpatient and inpatient. The student will become familiar with various procedures, including surgical and office procedures. The student will develop a working knowledge of the specifics of endocrinology involving children.

MPED 862  Pediatric Emergency Medicine
Student is responsible to take history from child or parent(s) and do a complete examination and make a preliminary working diagnosis with a plan to work up and manage. The student discusses the child's care with attending physician. The student learns Emergency Department procedures, minor suturing, I&D, splinting, etc., under the attending physician's supervision. The student is closely supervised by the attending physician and has a very close working relationship.

DEPARTMENT OF PHYSIOLOGY AND BIOPHYSICS

The goal of the Department of Physiology and Biophysics is to have students develop a thorough understanding of the principles and mechanisms involved in cellular and organ systems physiology. This is accomplished through an intensive course of study including Medical Physiology, Neuroscience and a variety of elective courses of study, as well as research opportunities for medical students. The subject content of the courses presents normal system physiology as well as discussions of pathological conditions that are of clinical relevance. Teaching is done by full-time faculty using different venues, such as large lecture presentations, small group conferences, individual consultation and laboratory demonstration-participation. As the department is committed to medical education, there is considerable one-on-one interaction between students and faculty, as well as individualized feedback on their progress in mastering course material. Students are also presented with numerous opportunities for active participation in laboratory work.

Faculty in the department are engaged in research on the cardiovascular system, brain metabolism, endocrinology, membrane function, muscle contraction, neuroscience, and renal function. A number of students in the Department are pursuing advanced degrees in physiology.

REQUIRED COURSES

MPHY 500A, B  Medical Physiology
The course offers the basic principles of organ system physiology. Through lectures, demonstrations, conferences, and laboratory work, students receive a quantitative and integrated concept of subcellular, cellular and organ system function.

MPHY 500A
Fall quarter, five lectures and three hours of laboratory work and conferences per week (7 units).

MPHY 500B
Winter quarter, six lectures and two hours of laboratory and conferences per week (7 units).

14 units total.

Sophomore Elective Courses

MPHY 609  Cardiovascular Pathophysiology
Clinical aspects of cardiovascular function are emphasized, e.g., heart sounds and murmurs, electrocardiogram, monitoring of central venous pressure, and cardiac function curves. Fall quarter, 2 hours per week (2 units).

Prerequisite: Medical Physiology (MPHY 500A, B) or its equivalent.

MPHY 610  Renal Cell Biology
Students are taught fundamental processes of renal physiology and pathophysiology at a cellular level. An examination of recent literature and student presentations are emphasized. Fall quarter, 2 hours per week (2 units).

MPHY 615  Physiology of the Liver
The normal functions of the liver are discussed as well as the experimental techniques used in the study of the liver. Various pathologies of the liver are presented and related to the disturbances of the normal physiology. Winter quarter, two lecture hours per week (2 units).

MPHY 620  Integrative Physiology
Students increase their capabilities to think through complex, integrative-type, physiological clinical situations, improve performance on data interpretation problems and better understand the physiological rationale for appropriate corrective measures, as well as the pathophysiology involved in
many disease states. **Spring quarter (2 units).**

**MPHY 624  Pulmonary Pathophysiology**
The biophysics of pulmonary mechanics and gas transport are presented as a basis for evaluating pulmonary function. Modern pulmonary function testing equipment is utilized in the laboratory, and an emphasis is placed on recognizing abnormal lung volumes and airflows. **Spring quarter, 2 hours per week (2 units).**

*Prerequisite:* Medical Physiology MPHY 500A,

**MPHY 626  Research in Physiology**
Students are given the opportunity to become involved in significant physiological research. In doing so, the student gains experience in: designing experiments; operating modern research equipment; gathering meaningful data; evaluating experimental results; and preparing the results for publication. **All quarters.**

**Senior Elective Course**

**MPHY 801  Research in Physiology**
This elective provides students with an opportunity to become involved in significant physiological research. In doing so, the student gains experience in designing experiments, operating modern research equipment, gathering meaningful data, evaluating experimental results, and preparing the results for publication. The student selects an area of interest and a mentor. The student discusses with the mentor the nature, feasibility and specific objectives of the research project.

**Multidisciplinary Courses**

**MCBA 606  Advanced Topics in Cell Biology II: Extracellular Matrix and Cytoskeleton**
This course focuses on selected topics concerning the structure and function of molecules and organelles within the cytoplasm and extracellular matrices.

*Emphasis placed on the use of primary source materials. 2 hours per week (2 units). Not offered every year.*

*Prerequisite:* MBCH 502.

**MCBA 607  Advanced Topics in Cell Biology III: Growth Regulation**
This course focuses on four aspects of eukaryotic growth regulation. Topics include cell cycle theory and early genes, growth factors, oncogenes and immunology of cancer. Emphasis is placed on human malignancy. Format is lecture and seminar with heavy emphasis on original literature source material. **2 hours per week (2 units). Not offered every year.**

*Prerequisite:* MBCH 502 or consent of instructor.

Chicago Medical School
DEPARTMENT OF PSYCHIATRY AND BEHAVIORAL SCIENCES

Sophomore Required Course

MPSY 601A, B Clinical Neuroscience
This multidisciplinary course focuses on brain structure and function and their clinical manifestations. Faculty includes members of the Departments of Psychiatry and Neurology. Term I covers brain organization strategies for the diagnosis of central nervous system disease. These strategies include the mental status and cognitive assessment examinations, psychological testing, and routine (e.g., blood count) and specialized (e.g., lumbar puncture, magnetic resonance imaging) laboratory testing, normal and abnormal personality. Term II covers disorders of the central nervous system, encompassing psychopathology. For these disorders, prevalence, pathophysiology, clinical manifestations, diagnosis, treatment and prevention are covered. 7 total units.

Sophomore Elective Course

MPSY 699 Evaluating a Patient From a Different Culture Through Cinema
Students will understand how culture facilitates and hinders medical care, and learn the skills which will enable them to interview patients from different cultures through the use of film. This course will discuss topics from a student’s perspective and cross culture communication patterns and their impact on clinical care. Ten weeks.

Junior Required Course

MPSY 700 Psychiatry Clerkship
This is an intensive, full-time experience in the medical specialty of psychiatry. Under faculty supervision, clerks perform the duties of house staff. Clerks participate in interviews and history taking, charting, triage and referral decisions, treatment and care of psychiatric inpatients and significant experience in consultation/liaison psychiatry and outpatient psychiatry. The classroom work consists of seminars on psychiatric emergencies, psychotherapy, behavior modification, liaison/consultation psychiatry, pediatric psychiatry, forensic and ethical psychiatry.

Case conferences, grand rounds, and professor rounds are held regularly. Clerks on inpatient services are assigned a personal caseload of two new patients per week; there are different responsibilities on the other services. Elgin Mental Health Center, Mount Sinai Hospital and North Chicago Veterans Affairs Medical Center. Six weeks.

Students who have received PhD degrees in the RFUMS MD/PhD program, or who have otherwise demonstrated outstanding performance by certain standards prior to the clerkship, are eligible to participate in a clerkship honors program in which they participate in specialized research or clinical experiences during this required clerkship.

Senior Elective Courses

Note: Prerequisites for all senior elective courses: successful completion of the clerkship in Basic Psychiatry and departmental permission.

MPSY 817 Child Psychiatry
The goal of this course is to enable students contemplating a career in pediatrics (or child psychiatry) to gain valuable experience in treating children, adolescents, and their families in an active outpatient setting. Under the supervision of board-certified child psychiatrists, students assume the role of house staff and diagnose and treat a variety of patients. A number of therapeutic models are used, and the student is considered part of the treatment team.
MPSY 825 Clinical Elective in Forensic Psychiatry
Student will become familiar with the specialized clinical and medicolegal issues surrounding treatment of patients adjudicated Not Guilty by Reason of Insanity and Unable to Stand Trial. Three to four weeks, 40 hours/week.

MPSY 830 Neuropsychiatry Clinical Elective
Students will spend four weeks working closely with attendings at the North Chicago Veterans Affairs Medical Center, Kiley Developmental Center, and the Behavioral Health Center in Vernon Hills, IL. Students will be assigned to the neurobehavioral clinic, neuropsychiatric clinic, women's psychiatric clinic and developmental disability clinic. Students will evaluate patients with Parkinson's disease, head injury, epilepsy and developmental delay. Four to six weeks, 40 hours/week.

MPSY 891 Psychotherapy Elective
This elective will expose senior medical students to the basics of psychotherapy theory and practice, through required readings and patient care in inpatient and outpatient settings. Four weeks, 40 hours/week.

MPSY 899 Sleep Disorders Clinic and ECT
This elective will combine two specialty clinics: 1) ECT Clinic, which will involve ECT consultations and student participation in all aspects of administering ECT; and 2) Sleep Disorders Clinic which will expose students to common sleep disorders, in addition to learning about the laboratory investigations of sleep disorders and the various tests used and their role in managing sleep disorders. Three to 4 weeks.

Facilities and Affiliations
The Department has affiliations with Mount Sinai Hospital, Elgin Mental Health Center and the North Chicago Veterans Affairs Medical Center, and has ongoing programs in community facilities in DuPage County and the Behavioral Health Center at Rosalind Franklin University Health System.

RADIOLoGY

The Department offers medical students an introduction to all of the various branches and diagnostic modalities of radiology, including computerized tomography, ultrasound, nuclear medicine, radiation/health physics, and magnetic resonance imaging. The Department offers an elective course in radiology in the second year, participates with other departments in teaching the basic radiologic anatomical correlation in the first year and the clinical application of radiology in the second year, and offers six intramural radiology clerkships in the senior year. In each of these activities, the faculty seeks to inculcate sound decision making and systematic implementation of different radiologic modalities, and to develop a thorough understanding of proper indications and contraindications in radiological procedures in patient care. Teaching evaluations and other educational research methods are utilized extensively to further improve learning opportunities.

The Department of Radiology is able to call upon faculty and clinical resources located in all of the hospitals in the Chicago metropolitan area that are associated with the Chicago Medical School.

Sophomore Elective Courses

MRAD 600  Diagnostic Radiological Imaging
This elective helps students develop skills in understanding the radiographic appearance of normal anatomical structures, variations of the normal and the contrast with common abnormalities encountered in clinical conditions. The course also deals with augmentation of the student’s skills in physical diagnosis and patient examination, demonstrating visually the normal and abnormal findings in simulated physical examination situations. Teaching is done in semi-formal lecture format with radiographs selected from the teaching files of the Department. Students will be given an exam and be required to turn in a course evaluation at the end of the course.

Requisite: M2 standing; Advanced M1s during last term only.

Senior Elective Courses

MRAD 801  General Diagnostic Radiology Clerkship
Students work with faculty at the North Chicago Veterans Affairs Medical Center to develop skills in interpreting radiographic anatomy, physiology and pathology. In addition to and within the NCVA rotation, students will learn and understand routine procedures and augment skills in differential diagnosis of radiographic manifestations of common clinical situations. Students will attend scheduled supplemental, didactic lectures and interdisciplinary conferences given by faculty. Students may also be assigned independent work, utilizing the various learning aids in the Departments at CMS and at the NCVAMC. Students are required to complete a paper with images and bibliography on which they will give an oral presentation by the end of rotation. Offered Fall, Winter and Spring in four-week sessions during dates specified on the Radiology website. One to four students per session.

MRAD 802  General Diagnostic Radiology Clerkship
This elective helps the student develop skills in interpreting radiographic anatomy, physiology and pathology. The student learns and understands routine procedures and augments skills in differential diagnosis of radiographic manifestations of common clinical situations. Students work one-on-one with an attending radiologist at Mount Sinai Hospital Medical Center. Offered Fall, Winter and Spring in four-week sessions. One student per session.
MRAD 806  Introduction to Neuroradiology Clerkship
This course, a two week specialty rotation, held at Advocate Lutheran General Hospital, is an introduction to the clinical problems and imaging modalities involved in neuroradiology, including neuro-interventional techniques. Prerequisite: Completion of a four-week Diagnostic Radiology elective. **Offered in all quarters of academic year in two-week rotations.** Maximum two students per session, a maximum of six rotations per year.

MRAD 809  General Diagnostic Radiology Clerkship
This four-week course, held at Advocate Illinois Masonic Medical Center, is designed to introduce students to diagnostic radiology in the community hospital, including: 1) basic radiographic interpretation, i.e., general radiology; 2) cross-sectional imaging, i.e., general radiology; 3) neuroradiology, special procedures and interventional radiology; and 4) utilization of imaging and the role of the radiologist as a consultant. Requirements include an oral clinically oriented presentation at the end of the rotation. Students are expected to participate in all conferences, both radiology teaching conferences and interdisciplinary conferences. **Offered all quarters or as determined by faculty in four-week sessions.** One to four students per session.

MRAD 810  Radiation Therapy Clerkship
This four-week specialty elective is held at Advocate Lutheran General Hospital- Center for Advanced Care. Our faculty are committed to training medical students to be more aware of the oncologic aspects of human medicine. The medical students will be better versed in areas of clinical symptoms as they relate to oncology along with the diagnosis and workup of malignancies. Our faculty will instruct the student physician on our unique specialty with special attention to the indications and details regarding brachytherapy and external beam therapy with three-dimensional or intensity-modulated treatment planning. We will also educate the medical students in all aspects of oncology treatment, not only in radiation therapy, but also in chemotherapy and surgery. We will also train these future physicians in the realms of post-radiation patient care and follow up for malignancies. Responsibilities will include: 1) performing history and physicals on selected new patient consults, both in the ambulatory and inpatient settings; 2) participate in the decision making for patient workup and management in collaboration with the attending physician; 3) assigned to a physician to follow on a daily basis; and 4) attend oncology conferences. Four hours per week will be spent in tumor conferences, and one hour of formal lecture will be given per week. **Offered all quarters or as determined by faculty in four-week sessions.** Maximum two students per session.

MRAD 812  Introduction to Interventional Radiology Clerkship
This two-week specialty rotation at Advocate Good Shepherd Hospital in Barrington, in which students will develop an awareness of the indication of the various interventional procedures, how the procedure will benefit the patient, the risks and complications of the procedure and procedure outcomes. Students will function under the supervision of an interventional radiologist, either shadowing or one-on-one, perform pre and post interventional examinations, assist with procedures, and discuss findings and treatment plans with the supervising interventional radiologist. Students will prepare material for an oral presentation to be given at the end of rotation. **Offered all quarters or as determined by faculty in two-week sessions.** **Prerequisite** is completion of a four-week diagnostic radiology rotation. Maximum one student per session.

DEPARTMENT OF REHABILITATION MEDICINE

The Department provides didactic and clinical educational opportunities to students and postgraduate physicians in the medical care of the ever-increasing number of patients with sequelae of trauma, disease, congenital and degenerative abnormalities. Elective courses in rehabilitation medicine, physical fitness and sports medicine, electrodiagnosis and electrotherapy, and research in rehabilitation medicine are offered to second-year students. Senior students may take a clinical elective in electromyography, rehabilitation medicine, sports and spine rehabilitation, clinical pediatric rehabilitation, clinical management of chronic pain and rehabilitation research at any of several hospitals.

In its clinical course work, faculty of the department seek to:

● Improve students' abilities to evaluate the clinical entity, quality of life and total functional capacities and needs of patients as living, functioning individuals, and as members of families and communities.

● Develop skills in establishing short- and long-range goals for prophylaxis, health maintenance, diagnosis, treatment, patient education, restoring functions and quality of life.

● Sensitize students to basic principles of comprehensive patient care in prevention of disease, complete evaluation of clinical entity and quality of life. Treat cost effectively and educate patients to the contributions of allied health personnel and community resources in maximizing patient functioning and improving the quality of life.

The department is affiliated with many medical centers. These facilities, together with a large and diversified faculty, expose the student to a considerable variety of methodologies, healthcare approaches to various patients, and clinical entities. Postgraduate clinical conferences are held for physicians. Research within the department focuses upon the use of electromyography to investigate variations in conduction of peroneal and tibial nerve components in sciatic nerve pathology, the effect of electric currents on inflamed joints, variations in pain threshold, myofascial pain syndromes and systemic and seasonal vascular pathologies in patients with diagnosis of strokes, peripheral vascular disease and coronary artery diseases.

Sophomore Elective Courses

MRHM 613 Research Elective in Rehabilitation Medicine
This course is designed to be a comprehensive, experience-based practical exercise in conducting research on pain disorders. Students who choose this elective will be involved in all aspects of pain research to include study protocol development and grant writing, subject recruitment, study execution, data entry/analysis and presentation at scientific conferences. (Other duties are assigned). Students should be willing to dedicate between three and 15 hours per week and have an interest in learning all about aspects of the diagnosis and treatment of pain disorders.

Senior Elective Courses

MRHM 801 Rehabilitation Medicine for Primary Physicians
Students work under the direct supervision of the instructional staff at various affiliated hospitals to obtain an overview of rehabilitation. Techniques include evaluation, goal setting, discharge planning, team approach, therapeutic procedures for inpatients and outpatients. Opportunities to pursue special interest in neurologic diseases, spinal cord injury, geriatrics, electrodiagnosis, surgical, cardiac or other conditions are available. A term paper on a related
subject of interest is suggested. **All quarters.** Multiple sites, and North Chicago VA Medical Center.

EMG, exercise electrocardiography and exercises for cardiac patients, basic psychological testing and administration of tests including the interpretation. **All quarters.** Hines VA Medical Center.

**MRHM 803 Rehabilitation Medicine for Primary Physicians**

In this elective, the student works directly with the instructors and under their direct supervision, the student is expected to take responsibility for a limited number of patients, review the medical problem with the instructor and define rehabilitation goals after listing the problems at hand, and follow patients at various therapies. Special laboratory training includes electrodiagnosis of neuromuscular diseases, including EMG, exercise electrocardiography and exercises for cardiac patients, basic psychological testing and administration of tests including the interpretation. **All quarters.** Hines VA Medical Center.

**MRHM 804 Clinical Rehabilitation Medicine for Primary Physicians**

In this elective, students are expected to participate in medical and rehabilitation care provided to inpatients and outpatients. They perform history and physical examinations and monitor patients' progress through the rehabilitation program. Students document this progress in clinical record. All of these activities are under the supervision of the Physical Medicine and Rehabilitation residents and the attending staff. **All quarters.** Schwab Rehabilitation Hospital. Rehabilitation Institute of Chicago.

**MRHM 809 clinical Adult Inpatient Service**

Students will have the responsibility for the initial workup, the prescription of allied health services, and medical coverage of physically and cognitively disabled inpatients. Students will initially attend and later participate in the direction of patient staffings by the allied health team. They will learn to appreciate the contributions of all members of this team. This rotation will also incorporate outpatient clinic exposure (80% inpatient; 20% outpatient). Focus areas include spinal cord injury, head trauma, osteoarthritis, stroke, amputee, and general rehabilitation.

This elective will enhance the student's ability to provide medical and rehabilitative care for disabled patients in a multidisciplinary team approach. It will also provide experience in writing appropriate therapy prescriptions, and in determining long- and short-term rehabilitative goals.

**MRHM 811 Individual Studies**

Special studies can be designed for students on an individual basis that may include such aspects of PM&R as electrodiagnostic procedures, psychological implications, spinal cord injuries, orthotics, prosthetics, outpatient, etc. This elective will enhance the student's understanding of a specific area of focus in PM&R: electrodiagnostic medicine, orthotics/prosthetics or performing arts medicine.

**MRHM 812 Rehabilitation Research**

There are extensive opportunities for research in PM&R. Neurophysiology and neuropsychology research are emphasized. Supervision can be provided for students with original research ideas, or the student may consult with department faculty for research ideas. This elective will be customized on an individual basis to provide maximum learning experiences in clinical research, and to offer insight to the field of PM&R.

**MRHM 813 Clinical Pediatric Rehabilitation Service**

Students will work directly with family units, do initial history and physical examination on new patients admitted to the pediatric service, and will have the opportunity to participate in the evaluation and care
of the patients in a multidisciplinary team approach. Students will also have the opportunity to participate in the Rehabilitation Consult Service at Children’s Memorial Hospital and visit other institutions in the metropolitan area that serve disabled children as well as attend outpatients at the Rehabilitation Institute of Chicago.

This elective will provide insight and experience with the direction and coordination of an interdisciplinary rehabilitation team in the care of a child with a disability. Students will gain an understanding of pediatric outpatient care and long-term management of the disabled child.

**MRHM 814 Inpatient and Outpatient Rehabilitation**

This elective emphasizes evaluation and treatment of physically disabled handicapped patients and patients with a variety of musculoskeletal dysfunctions. The student will have responsibility for the initial patient evaluation and will participate in patient management. The student will attend patient staffings and observe patients in therapy. The student will have an opportunity to perform electrodiagnostic procedures. 50% inpatient, 50% outpatient.

**MRHM 815 Clinical Management of Chronic Pain**

Students will gain an understanding of principles of diagnosis and treatment of chronic low back and other neurological chronic pain syndromes. They will learn to examine and evaluate the spine. They will attend staffings and will participate in the total management of inpatients with severe chronic pain problems. In addition, they will observe the physical treatment of patients including all therapies. They will observe techniques of biofeedback, relaxation therapy and behavior modification.

This elective will provide understanding of the principles of diagnosis and treatment of chronic pain, competence in its evaluation, and ability to differentiate treatment approaches for chronic versus acute pain.

**MRHM 816 Rehabilitation Medicine Clinical Service**

This elective emphasizes evaluation and treatment of the physically disabled handicapped patients and patients with a variety of musculoskeletal dysfunctions. The student will have responsibility for the initial patient evaluation and will participate in patient management. The student will attend patient staffings and observe patients in therapy. The student will have an opportunity to perform electrodiagnostic procedures. 50% inpatient, 50% outpatient.

Gary Yarkony, MD, Clinical Professor
DEPARTMENT OF SURGERY

Junior surgical clerks and seniors taking surgical electives are given maximum responsibility and opportunity to participate, consistent with safety and high standards, in the care of patients. There is a schedule of visiting faculty from institutions in and outside the Chicago area and a full complement of qualified professionals in other medical and allied fields. Patients at the affiliated hospitals present challenging problems in the management of all states of surgical care.

Faculty in the department are currently engaged in research in the areas of shock and critical care, surgical nutrition, neurosurgery, and education.

Sophomore Elective Courses

MSUR 600  Electives in Cardiovascular Surgery
The student, under the direction of the cardiovascular surgeon, will observe history, exam, and surgery. Relevant clinical correlations to basic science courses will be evident. Some examples of procedures that will be observed: coronary bypass, valve repair and replacement, implantable devices, anti-arrhythmia and revascularization procedures. The student will arrange scheduled visits to the cardiovascular office in Libertyville, so as not to conflict with his or her academic schedule. Spring quarter, 10 weeks. (1 credit).

MSUR 601  Elective in Orthopedics
The student under the direction of the orthopedic surgeon will observe history, exam and surgery. Fractured bones, osteoarthritis, rheumatoid arthritis, strains, low back discomfort, and carpal tunnel syndrome are examples of some of the conditions that will be observed. Relevant clinical correlations to basic science courses will be evident. The student will arrange scheduled visits to the orthopedic office in Long Grove, IL, not to conflict with the academic schedule.

Required Course

MSUR 700  Surgery Clerkship
The Surgical Clerkship Program is an eight-week rotation in one of six affiliated hospitals: Mount Sinai Hospital Medical Center, Illinois Masonic Medical Center, Christ Hospital, John H. Stroger, Jr., Hospital of Cook County, Lutheran General Hospital, and Swedish Covenant Hospital, under the supervision of Internal Coordinators who are faculty members. Six weeks are assigned to general surgery, and two weeks of one of the following electives: anesthesiology, emergency room, metabolic care, orthopedic surgery, trauma, urology and vascular surgery.

As an integral part of the surgical team, the clerks gain clinical experience by participating in clinics, rounds, operative procedures, and on-call duties. They attend the following regularly scheduled surgical conferences: radiology, pathology, tumor, morbidity and mortality, grand rounds, surgical GI conference, vascular, journal club, critical care, surgical indications, basic science, cardiothoracic, orthopedic, surgical nutrition and trauma.

The main didactic aspect of the Surgical Clerkship, the weekly Core Lecture Series, correlates with the Core Curriculum and is required by all clerks. The Core Lecture Series is supplemented by tutorials at each hospital. At these sessions, small groups of students meet with an instructor to discuss and correlate clinical and basic science aspects of the current lecture.
Senior Elective Courses

MSUR 806 Trauma
The Department of Surgery at Mount Sinai Hospital Medical Center offers a four-week elective on the Trauma Service that allows the fourth-year student an in-depth opportunity to care for the acutely injured patient.

MSUR 808 General Urology
This elective will introduce the student to the principles of urology, basics of urologic disease, diagnostic approaches, and the treatment of urologic problems. Emphasis will be placed on giving the student a working knowledge of urologic problems, i.e., urinary tract infections, obstructive uropathy, urolithiasis, tumors, and congenital defects. The Urology Service at Mt. Sinai Health System of Chicago will be utilized. 2 weeks.

MSUR 809 Surgical Critical Care
Offered at Mount Sinai Hospital Medical Center, the clinical clerkship in multidisciplinary critical care provides the senior student an opportunity to serve as an active member of a fellow-student team intimately involved in the critical care of patients in the medical-surgical intensive care units. The clinical experience exposes the student to a wide variety of medical and surgical problems for which the clerk is responsible for diagnosis and treatment under the direct supervision of the critical care fellow and attending physician. The full teaching program includes attending rounds, specialty conferences, morbidity & mortality conferences, journal club, and Surgical Grand Rounds. The clerkship is intended to permit the student to serve as an “acting intern” as a means of enhancing his or her knowledge, skills and judgment in clinical surgery.

MSUR 820 Surgical Subinternship
The clerkship is designed to continue surgical training as an extension of the Junior clerkship and is offered at Mount Sinai Hospital Medical Center.

MSUR 823 Orthopedics
Students work directly with the attending and resident staff at Mount Sinai Hospital Medical Center. Management of acute injuries, such as fractures, dislocations and tendinous injuries, is the focus. Students are responsible for the pre- and post-operative care of patients, as well as the principles of rehabilitation. They learn the proper techniques of fracture immobilization (casting, traction, internal fixation). They are expected to perform an in-depth examination and evaluation of the extremities and spinal column.

MSUR 824 Trauma and Critical Care Surgery
This is a four-week clinical rotation on an inpatient service at Illinois Masonic Medical Center. The exposure is to the acutely traumatized patient and the critical care, follow-up, and management of these patients. The student functions at an extern level with close observation by the attending staff. Two full-time trauma faculty make rounds seven days a week. Conferences and lectures are primarily clinically based on topics relating to the patient load.
MSUR 825 Otolaryngology
This four-week clinical elective gives the student firm foundation for the recognition and appropriate course of action of problems of otolaryngology head and neck surgery. Students are included in all the clinical activities of the instructor. This includes initial and follow-up office visits of all ENT population as well as observation and assistance in the operating room. Topics of general otolaryngology are assigned to the students. Following their readings on the topics, formal and informal discussions are held.

MSUR 842 General Surgery / Advocate Lutheran General Hospital
The student will participate as a subintern on an academic General Surgery Teaching Service in which a broad spectrum of surgical diseases are encountered. The student will have the opportunity to provide preoperative, intraoperative, and postoperative care for approximately 75 to 80 operative patients per month. The student will be a member of the team providing care in the Surgical Intensive Care Unit, as well as the step down units. The student will be afforded the opportunity to attend daily SICU teaching rounds. The student will participate in weekly surgical grand rounds, M&M conferences, morning presentations of patient case scenarios, and trauma conferences. The student will be a regular contributor to the case presentations, and will be a key member of the academic team.

MSUR 844 Adult Cardiac Surgery / Advocate Lutheran General Hospital
The student will experience full exposure to the general cardiology surgery disease processes. He or she will encounter inpatient and outpatient care of patients with congenital and adult heart disease, to include valvular and coronary artery disease. The student will function as a subintern on the Academic Cardiac Surgery Service, and will be exposed to the outpatient evaluation and decision-making process regarding preoperative assessment and surgical recommendations following cardiac catheterization, angioplasty, etc. The student will be in the outpatient cardiac surgery office approximately two one-half days per week. There will be no in-hospital call.

MSUR 845 Orthopedic Surgery / Advocate Lutheran General Hospital
A senior elective in Orthopedic Surgery includes exposure to an active Emergency Room and patients with variable degrees of orthopedic trauma, preoperative patient evaluation, and intense postoperative care experiences in patients following orthopedic trauma and reconstructive surgery. Two formal teaching conferences are held weekly, and some exposure to orthopedics in an office setting is also included. The student will work closely with an orthopedic resident staff under the guidance of an active faculty of attending orthopedists. Appropriate readings and references will be suggested.

MSUR 847 General Plastic and Reconstructive Surgery / Advocate Lutheran General Hospital
The student will be exposed to the full spectrum of General Plastic Surgery in the Outpatient Ambulatory Surgery Center. The spectrum of disease will include congenital, reconstructive, and cosmetic. The student will see patients in the plastic surgeon's offices (adjacent to the hospital), and will be involved in diagnostic and therapeutic decisions prior to surgical intervention. The student will see patients in the plastic surgeon's offices post-operatively. The office hours will be approximately two to two-and-one-half to three days per week with the faculty plastic surgeon in the operating room. Occasional inpatient reconstructive surgical problems will be included. There will be no night call.

MSUR 848 Trauma/Critical Care / Advocate Lutheran General Hospital
The student will participate as a subintern on the Trauma Service, and will be responsible for the implementation of diagnostic and therapeutic decisions regarding seriously ill trauma victims, to
include those requiring ventilatory support, nutritional therapy, and optimization of hemodynamic parameters. The student will participate in daily morning conferences, weekly trauma conferences, grand rounds, and M&M conferences as they relate to trauma patients and critically ill surgical patients. The student will provide formal presentations of patients to the Trauma academic group on a frequent and regular basis. Student will attend daily SICU rounds.

MSUR 849 Neurosurgery / Advocate Lutheran General Hospital
The student will act as a subintern on the academic Neurosurgery Service. The student will be exposed to a broad spectrum of general neurologic diseases involving surgical intervention as a therapeutic modality. The spectrum of patients includes those with neurotrauma, neuro-oncology, congenital neurologic disease, and disease of the spine and peripheral nerves. The student will focus on neuroanatomy, neurophysiology, preoperative and operative decision-making, and the management of neurologic patients pre- and post-operatively.

MSUR 850 General Surgery and Gynecologic Oncology
The fourth-year elective student would report and have a relationship with the general surgery attendings who participate in clinical sessions at the Caldwell Breast Cancer Center, Monday through Friday mornings. The student would also interact with Dr. J. Dolan, Director of the Breast Center on Monday afternoons. The fourth-year student would be actively involved in all clinical activities regarding the Breast Center. The student would be expected to attend morning surgical rounds, all 7:00 a.m. surgical conferences, all breast conferences, as well as the Gynecology-Oncology Tumor Conference. The student would also view the diagnostic work-ups for patients who are being seen and evaluated in the Caldwell Breast Center with the attending surgeon, resident staff, and attending radiologists. The student would also participate in assisting at breast as well as Gynecology-Oncology surgical procedures in the main operating room as well as observing the minimally invasive biopsy techniques that are undertaken in the Caldwell Breast Center. All of the activities would take place at Advocate Lutheran General Hospital. 4 weeks.

MSUR 853 Urology
Students will work closely with a urologist in outpatient and inpatient settings, performing physical examinations and assisting in surgery. This elective will introduce students to the principles of urology, basic of urologic disease, diagnostic approaches and the treatment of urologic problems. Emphasis will be placed on giving students a working knowledge of urologic problems such as urinary tract infections, obstructive uropathy, urolithiasis, tumors, and congenital defects.

Prerequisite: Successful completion of the third-year surgical clerkship.

MSUR 854 Otolaryngology
The student will work closely with the otolaryngologist in outpatient and inpatient settings, performing examinations and assisting in surgery. This elective will introduce the student to the principles of otolaryngology, basics of otolaryngologic disease, diagnostic approaches and the treatment of otolaryngologic problems. Objectives include: 1) function under the supervision of a practicing otolaryngologist; 2) perform examinations on otolaryngologic patients; 3) discuss findings and treatment plans with the supervising physician; and 4) develop and awareness of the various factors and complexities of the patient’s specific conditions that need to be addressed in order to provide optimal care.

Prerequisite: successful completion of the third-year surgical clerkship.
