Research Policy Regarding Used Laboratory Equipment

Prior to used equipment being brought into Rosalind Franklin University of Medicine and Science research labs, approval by both the Executive Vice President for Research and the office of Environmental Health and Safety (EHS) is required. This approval will in part be based on the sufficiency of a decontamination plan, the specifics of which will be based on the likely level of prior exposure of the item in question to biological, chemical and/or radioactive agents. This policy includes donated and purchased equipment, as well as equipment brought to this institution by newly hired faculty.
